(i) Mutual inductance between two coils is defined as the magnetic flux associated with a coil when unit current flows through neighbouring coil.

1/2

Alternatively

Mutual inductance between two coils is defined as the magnitude of induced emf in a coil when the rate of change of current in neighbouring coil is unity.

SI unit of mutual inductance is henry(H).

For paraxial rays MP can be considered to be a straight line perpendicular to CP, Therefore right angled triangles $A'B'F$ and MPF are similar

$$\frac{B'A'}{PM} = \frac{B'F}{FP}$$

$$\text{Or } \frac{B'A'}{BA} = \frac{B'F}{FP} \quad (\because PM = AB) \quad \text{-----(1)}$$
