A sound source vibrates with a frequency of 1.0 kHz. Two sound waves, originating from this source, travel along different paths in air, where one path is 166 cm longer than other and then meet at a point. Then what will be the nature of interference? The speed of sound in air is 332 ms⁻¹.

- 1. It will be a constructive interference
- 2. * It will be a destructive interference
- 3. * Provided information is insufficient to say about nature of interference

4 * It will depend on the type of source

The motion of a block of mass 'm' is restricted on x-axis by attaching two identical springs of spring constant 'k' on its opposite sides. The other ends of the springs are fixed on walls. When the mass is displaced from its equilibrium position on either side, it executes a simple harmonic motion. The period of oscillations for this oscillation is

$$2\pi\sqrt{\frac{m}{k}}$$

$$2\pi\sqrt{\frac{k}{m}}$$

$$2\pi\sqrt{\frac{2k}{m}}$$

$$4. \checkmark 2\pi \sqrt{\frac{m}{2k}}$$
