

Multiple Choice

You will listen to a quick recording. After the recording has been completed, you will see four multiple-choice

Recording:

Lecturer: Climate change is one of the most pressing issues facing our planet today. It is caused by the release of greenhouse gases into the atmosphere, which trap heat and warm the planet. The main greenhouse gases are carbon dioxide, methane, and nitrous oxide. These gases are released into the atmosphere from a variety of sources, including the burning of fossil fuels, deforestation, and agriculture. The effects of climate change are already being felt around the world. These effects include rising sea levels, more extreme weather events, and changes in plant and animal life.

1. What is the topic of the lecture?
 - Climate change and its causes
 - The effects of climate change
 - How to reduce greenhouse gas emissions
 - The role of humans in climate change
2. Which of the following is not a greenhouse gas?
 - Carbon dioxide
 - Methane
 - Nitrous oxide
 - Ozone
3. What is the main source of greenhouse gas emissions?
 - The burning of fossil fuels
 - Deforestation
 - Agriculture
 - All of the above
4. What are some of the effects of climate change?
 - Rising sea levels
 - More extreme weather events
 - Changes in plant and animal life
 - All of the above

5. What can be done to reduce greenhouse gas emissions?

- Transition to renewable energy sources
- Improve energy efficiency
- Reduce deforestation
- All of the above

Fill in the Blanks

Listen to this recording, and fill in the blanks with lacking words

Recording:

Lecturer: The solar system is the planetary system that includes our Sun and all of the objects that orbit it. There are eight planets in the solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. The planets are divided into two groups: the inner planets and the outer planets. The inner planets are Mercury, Venus, Earth, and Mars. The inner planets are made of rock and are relatively small. The outer planets are Jupiter, Saturn, Uranus, and Neptune. The outer planets are made mostly of gas and are much larger than the inner planets.

Passage:

The solar system is the planetary system that includes our Sun and all of the objects that orbit it. There are eight planets in the solar system: Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune.

The planets are divided into two groups: the ____ (1) ____ planets and the ____ (2) ____ planets. The inner planets are Mercury, Venus, Earth, and Mars. The inner planets are made of rock and are relatively small.

The outer planets are Jupiter, Saturn, Uranus, and Neptune. The outer planets are made mostly of ____ (3) ____ and are much larger than the inner planets.

Summarize Spoken Text

You will hear a short lecture. Write a short summary in 50-70 words. You have 10 minutes to finish this task.

You have 10 minutes to finish the task. Your response will be judged on the quality of writing and on how well your response presents the key points presented in the lecture.

Recording:

Lecturer: The internet has revolutionized the way we live and work. It has made it possible to communicate and share information with people all over the world instantly. The internet has also had a major impact on the economy. It has created new industries and jobs, and it has made it easier for businesses to reach new customers.

The internet has also had a significant impact on education. It has made it possible for students to learn from anywhere in the world, and it has provided them with access to a vast amount of information and resources. The internet is a powerful tool that can be used for good or for bad. It is important to use the internet responsibly and to be aware of the potential risks.
