Sir/Madam

It gives me immense pleasure to be writing this letter of recommendation in support of Mr Andrew Jomi for his admission into the Ms in Computer Science Engineering at your esteemed institute. I am confident that Mr. Jomi will excel in this program and prove himself to be of great value to your institute.

I have had the good fortune of knowing and working with Mr Jomi for around 2 years now, as his direct supervisor. He first joined our organization as a trainee intern, during his junior year in college. His excellent performance during the 2 month internship period greatly impressed all his superiors at work. Subsequently, he was offered a full-time position at the company based on his performances in the entry-level aptitude and technical skills exams. He personally impressed me during the interview session with the depth of his technical knowledge and razor-sharp analytical abilities.

Mr Jomi is one of the brightest minds I have ever had the pleasure of working with. Additionally, he has an extremely positive attitude which is capable of inspiring anyone that he works with. He has an eye for details and approaches his work with the utmost sincerity and dedication.

Mr Jomi started his career with us as a tester. He joined a group of employees tasked with testing out automation being developed for one of our logistics-based clients. It was his determination and attention to detail that reduced our testing time requirement by a factor of almost 30%. He developed an automated report generation system that ensured that employees spent less time manually entering data into the reports. Mr Jomi is blessed with excellent communication skills, which means he automatically becomes the voice for any team that he is placed with. Within a year, he moved from testing to developmental work. He became proficient in the technical aspects of business management software such as SAP and Salesforce. In the last project, that he worked on, Mr Jomi was single-handedly responsible for the design and deployment of a resource management system for one of our more important clients.

Even on his initial days, I never failed to be impressed by Mr Jomi's domain knowledge and understanding of system architecture. He is always keen to improve on existing practices thereby improving efficiency. Mr Jomi surely has the technical skills and knowledge to succeed in a graduate-level computer science degree program. However, I believe that it is his true passion for developing unique software solutions to business problems which will make him stand out from the rest of the crowd.

As already mentioned early, I highly recommend Mr Andrew Jomi for a place in your master's program in computer science engineering. I have no doubt that he will prove himself to be an asset to the institute. I wish him well for his bright career ahead. Please reach out to my office for any further queries regarding his candidature.

Thank You
Yours Sincerely
Mr A.K. Jha
