There are two generic approaches for software designing - Top-down Design and Bottom-up Design. Read the following statements.

Statement I: Top-down design model starts with most specific and basic components. It proceeds with composing higher level of components by using basic or lower level components. It keeps creating higher level components until the desired system is not evolved as one single component.

Statement II: Bottom-up design takes the whole software system as one entity and then decomposes it to achieve more than one sub-system or component based on some characteristics. In light of the above statements, choose the correct answer from options given below

Given a two-input neuron with the following parameters: bias $b = 1$, weight factors $\mathbf{w} = [w_1 \ w_2] = [3 \ 2]$, and input vector $\mathbf{x} = [x_1 \ x_2]^T = [-5 \ 6]^T$.

Match the neuron's output (**List II**) for the different activation functions used (**List I**).

List I	List II
Activation function	Neuron's output
A. Hard limit	I. -1
B. Symmetrical hard limit	II. -2
C. Linear	III. 0
D. Log-sigmoid	IV. $1/(1+e^2)$

Choose the correct answer from the options given below:

1. A - II, B - I, C - III, D - IV
2. A - III, B - I, C - II, D - IV
3. A - III, B - II, C - I, D - IV
4. A - III, B - I, C - IV, D - II

Statements about partial classes in object-oriented programming language C# are given below:

Statement I: Partial classes give you the ability to split a single class into more than one source code file.

Statement II: For example, if the product class became particularly long and intricate, you might decide to break it into two pieces (e.g. public partial class Product).

In light of the above statements, choose the *correct* answer from the options given below:

1. Both Statement I and Statement II are correct
2. Both Statement I and Statement II are incorrect
3. Statement I is correct but Statement II is incorrect
4. Statement I is incorrect but Statement II is correct

The statements regarding inheritance in object-oriented programming concept are given below.

Statement I: Inheritance is a form of code reuse.

Statement II: It allows one class to acquire and extend the functionality of parent class.

In light of the above statements, choose the *correct* answer from the options given below:

1. Both Statement I and Statement II are true
2. Both Statement I and Statement II are false
3. Statement I is true but Statement II is false
4. Statement I is false but Statement II is true

The various steps involved in k-Nearest Neighbor (kNN) classification process are given below in random order:

- A. Determine the category (class) for each of the nearest neighbors.
- B. Determine parameter k - number of nearest neighbors.
- C. Sort the distance and determine nearest neighbors based on the k-th threshold.
- D. Calculate the distance between each testing sample and all the training samples.
- E. Use simple majority of the category of nearest neighbors as the prediction value of the testing sample classification.

Choose the correct order from the options given below:

- 1. B, A, C, D, E
- 2. B, C, D, E, A
- 3. B, D, C, A, E
- 4. B, C, D, A, E
