100 Questions

Que. 1 Read the question and answer the following questions:

The economic and labour crisis created by the COVID-19 pandemic could increase global unemployment by almost 25 million, according to a new assessment by the International Labour Organization (ILO). *However, if we see an internationally coordinated policy response, as happened in the global financial crisis of 2008/9, then the impact on global unemployment could be _____ lower.*

The preliminary assessment note, COVID-19 and the world of work: Impacts and responses, calls for urgent, large-scale and coordinated measures across three pillars: protecting workers in the workplace, stimulating the economy and employment, and supporting jobs and incomes. These measures include extending social protection, supporting employment **retention** (i.e. short-time work, paid leave, other subsidies), and financial and tax relief, including for micro, small and medium-sized enterprises. In addition, the note proposes fiscal and monetary policy measures, and lending and financial support for specific economic sectors.

Based on different scenarios for the impact of COVID-19 on global GDP growth, the ILO estimates indicate a rise in global unemployment of between 5.3 million ("low" scenario) and 24.7 million ("high" scenario) from a base level of 188 million in 2019. By comparison, the 2008-9 global financial crisis increased global unemployment by 22 million. Underemployment is also expected to increase on a large scale, as the economic consequences of the virus outbreak translate into reductions in working hours and wages. Self-employment in developing countries, which often serves to cushion the impact of changes, may not do so this time because of **restrictions** on the movement of people (e.g. service providers) and goods.

Fall in employment also means large income losses for workers. The study estimates these as being between USD 860 billion and USD 3.4 trillion by the end of 2020. This will translate into falls in the consumption of goods and services, in turn affecting the prospects for businesses and economies. Working poverty is expected to **increase** significantly too, as "the strain on incomes resulting from the decline in economic activity will devastate workers close to or below the poverty line". The ILO estimates that between 8.8 and 35 million additional people will be in working poverty worldwide, compared to the original estimate for 2020 (which projected a decline of 14 million worldwide).
