What has emerged in recent times as crucially important to controlling public opinion and communication is "framing" the debate—using language effectively to define the issues. People can be easily swayed by political catchphrases that are intentionally crafted to convince and direct us into making certain choices. It doesn't have to be complicated; in fact, the simpler the words, the more effective they often are.

George Lakoff, an eminent linguist, explains how each word in these seemingly innocuous phrases – tax relief; death tax – frames exactly how we're supposed to think, even as we're unaware of it. Taking up "tax relief", Lakoff says that newspapers treated them as if it were a neutral term, which it is not. Because the frame for "relief" assumes there has to be an affliction – causing pain or sorrow -- and an afflicted individual(s). The relief-provider is the hero, and anybody opposing or stopping relief is the bad guy. The second rule or principle people accept as true is that taxation is affliction,

Along with the assumption 'taxes are bad', we would also assume that "death tax" is immoral and ominous. An understanding of this helped the Republican machine to nose-lead Americans to opposing death tax. Simply by changing the name, it changed the frame of perception. When "estate tax" on the rich who could easily afford it was re-christened 'death-tax' and then it was proposed that it be abolished, a significant majority supported it. The supporters may not have or know what an estate is, but they certainly knew what it meant to be taxed when they died; they declared "taxing at death is immoral".
