

CS - 16

Computer Science & Information Technology

Duration of Test: 2 Hours		Max. Marks: 120
	Hall Ticket No.	
Name of the Candidate :		
Date of Examination :	OMR Answer Sheet	No.:
		_
Signature of the Candidate	Signat	ure of the Invigilator

INSTRUCTIONS

- This Question Booklet consists of 120 multiple choice objective type questions to be answered in 120 minutes
- 2. Every question in this booklet has 4 choices marked (A), (B), (C) and (D) for its answer.
- 3 Each question carries one mark. There are no negative marks for wrong answers.
- This Booklet consists of 16 pages. Any discrepancy or any defect is found, the same may be informed to the Invigilator for replacement of Booklet.
- Answer all the questions on the OMR Answer Sheet using Blue/Black ball point pen only.
- Before answering the questions on the OMR Answer Sheet, please read the instructions printed on the OMR sheet carefully.
- OMR Answer Sheet should be handed over to the Invigilator before leaving the Examination Hall
- 8 Calculators, Pagers, Mobile Phones, etc., are not allowed into the Examination Hall.
- 9. No part of the Booklet should be detached under any circumstances.
- 10 The seal of the Booklet should be opened only after signal/bell is given.

CS-16-A

COMPUTER SCIENCE & INFORMATION TECHNOLOGY (C5)

The system of equations x + 5y + 3z = 0, 5x + y - z = 0, x + 2y + z = 0 has

1.

(A) unique solution

which of the following statements is raise;

19.

- If O is a CPO and was a string of length at in L(O), now long is a derivation of wint O, it G is a Chomsky normal form?
 - (A) = 21
- (B) 21 + 1
- (C) = 21 1
- (D) 1
- 87. Which of the following is true for the language {ap | p is a prime}?
 - (A) It is not accepted by a Turing Machine
 - (B) It is regular but not context-free
 - (C) It is context-free but not regular
 - (D) It is neither regular nor context-free, but accepted by a Turing machine
- A minimum state deterministic finite automaton accepting the language 88.

 $L = \{w|w \in \{0.1\}^*, number of 0s and 1s in w are divisible by 3 and 5 respectively \{ has$

- (A) 15 states
- (B) 11 states
- (C) 10 states (D) 9 states

89. Consider the following grammar

 $G: S \rightarrow bS \mid aA \mid b$

 $A \rightarrow bA \mid aB$

 $B \rightarrow bB \mid aS \mid a$

Let Na (w) and Nb (w) denote the number of as and bs in a string w respectively. The language L(G) {a, b}+ generated by G is

- $(A) \quad \{ w \mid Na(w) > 3Nb(w) \}$
- (B) $\{ w \mid Nb(w) > 3Nb(w) \}$
- (C) $\{ w \mid Na(w) = 3k, k \mid 0, 1, 2, ... \mid 1 \mid (D) \mid \{ w \mid Nb(w) = 3k, k \mid 0, 1, 2, ... \mid 1 \mid (D) \mid \{ w \mid Nb(w) = 3k, k \mid 0, 1, 2, ... \mid 1 \mid \{ w \mid Nb(w) = 3k, k$
- The following diagram represents a finite state machine which takes as input a binary 90. number from the least significant bit.

Which one of the following is TRUE "

- (A) It computes I's complement of the input number
- (B) It computes 2's complement of the input number
- (C) It increments the input number
- (D) It decrements the input number
- 91. The language accepted by this automaton is given by the regular expression
 - (A) b * ab * ab * ab *
- (B) (a + b)*

(C) b * a (a + b)*

- (D) b * ab * ab *
- 92. The main function of a browser is to
 - (A) Compile HTML
- (B) Interpret HTML
- (C) De-compile HTML
- (D) Interpret CGI programs

98.	The hardware prior is called	ity int	errupt scheme	imple	mented using	senall	y connected I/O devices
	(A) Polling (C) Vectored inte	rrupt			Masked interr Daisy chainin		
99.	A framesherfaul		de investor is	L	15 16 D \ \	1	two-way set associative
99.	cache memory of si	ze 102	24 cache menu) 11 (TC	rds. The length	n of ea	ich cache word is
	(A) 32	(B)	44	(C)	10	(D)	32
100.	Which of the follow (A) D-flip flops					-	ng Busary Counters ? Multiplexers
101.	In two-wired hand lines are used.	shaki	ng method of	async	hronous data	transf	er the following control
	(A) Strobe and da (C) Strobe and da				Data valid and Strobe and da		888
102.	In floating point ar alignment?	ithme	tic which of t	he fol	lowing operation	ons de	nes not require mantissa
	(A) addition	(B)	subtraction	(C)	multiplication	(D)	division
103.	The hexadecimal ec (A) 3B15	•	ent to octal nui 981B			(D)	none of these
104.	The binary equivale (A) 1010.10101						
Set -[A			13			CS

Set -	A			14				CS				
	(A) 255 255.0.0	(B)	255, 255, 64, 0	(C)	255,255,128	0 (D)	255.255.252.0					
114.	An organization subnet mask wou	mization has a class B network and wishes to form subnets for 64 departments. The mask would be:										
	(A) 12	(B)	14	(C)	16	(D)	18					
110	Station A needs to send a message consisting of 9 packets to Station B using a sliding window (window size 3) and go-back-n error control strategy. All packets are ready and immediately available for transmission. If every 5th packet that A transmits gets lost, but no tack' from B is lost, then what is the number of packets that A will transmit for sending the message to B?											
113.	Station A needs	to send	a message co	nsistir	or of 9 packe	ts to S	tation B using a	. Jidno				
112.	11001001 is the protect it from er (A) 110010010	rors. Th	e message that	shoule	d be transmitte	ed is:	₹00 ±00	3x+1 to				
	(A) 212	(B)	2	(C)	221	(D)	2^{24}					
111.	In the IPv4 addressing format, the number of networks allowed under Class C ac											
110.	A Single bit full (A) Two half a (C) One Ex-OF	dders ar	nd one OR gate	(B)			d one AND gate					
109.	Which Logic circ (A) Full adder		아이들 아이를 가는 것이 없는 그리고 있는데 그리다.		Jack March 1995 and 1995 and 1995		DMA					
108.	Which of the foll (A) Shift regist	-										
107.	Which of the fol intervals ! (A) Shift Regis		10E		5). 2022			ied time				
	(C) Gray code			(D)	Parity code							
106.	 Which of the following code provides 9's complement of a number by simple bit (logical complementation): (A) Binary Coded Decimal (BCD) (B) Excess-3 code 											
	(A) 10011101	(B)	11001111	(')	11001110	(D)	000110000					
IVO.	winch of the following is the 6 on signed-2 s complement representation of the negative decimal number '-99'.											

	in a network of LAINS connected by bridges, packets are sent from one LAIN to anomer through intermediate bridges. Since more than one path may exist between two LANs, packets may have to be routed through multiple bridges. Why is the spanning tree algorithm used for bridge-routing "												
	(A) For shortest path routing between LANs												
	(B) For avoiding loops in the routing paths												
	(C) For fault tolerance												
	(D) For r	ninimizing co	llisions										
116.	6. Station A uses 32 byte packets to transmit messages to Station B using a sliding winder protocol. The round trip delay between A and B is 80 milliseconds and the bottlene bandwidth on the path between A and B is 128 kbps. What is the optimal window size the A should use?												
	(A) 20	(B)	40	iC)	160	(D) 320							
117.	In Ethernet	t when Manch	nester encodi	าฮ is แระย	f the bit rati	is:							
-C-1-1-1-1		the baud rate.			Twice the								
		e as the baud i			None of th								
118.	What is the maximum size of data that the application layer can pass on to the TCP layer below?												
	(A) Any	size		(B)	216 bytes-	size of TCP header							
	(C) 216 b			(D)	5%								
119.	If link tran circuit this		ames per sec	ond. and	each slot h	as 8 bits, the transmission	rate of						
	(A) 32kb	pps (B)	500bps	(C)	500kbps	(D) None of these							
120.	An ATM cell has the payload field of												
	(A) 32 by	ytes (B)	48 bytes	(C)	64 bytes	(D) 128 bytes							
			£
