

I have just completed undergraduate education by getting a degree in the Bachelor of Technology in telecommunication engineering and now I would like to pursue my MS in Telecommunications from TU Munich in Germany. Considering the fact that science and technology are two areas in which one can get the best world-class degree from Germany I was eying this option since high school.

I have an excellent academic record scoring above 80% both in High school and the secondary certificate. I completed the ICSE board and learned a lot not only through academic syllabus but also through the activities and the projects undertaken in the school. I got a lot of exposure to see life and science coming together as my school has collaborated with the school in Germany. During my Secondary Education, we had a lot of interaction not only with German children but also with German teachers visiting our school and guiding us about the differential education taking place in the country.

This made many children interested in studying in Germany and here also I am one of those luckier ones whose parents agreed for it and gave me a nod to sponsor my education. They also guided me at least to learn the basics of the German language as it will help me to mingle with the locals and understand the culture of my surroundings.

I also participated in various non-academic activities like debates, roleplays, school fairs, and sports. I continued the practical studies and the co-curricular activities even when I was in my undergraduate but the level of experiential learning decreased as there was no longer that German collaboration in my higher studies. I started realizing the difference between the two methods of delivery and got more inclined to have my higher studies from Germany.

I tried my best to acquire the fundamental knowledge required for the advanced course and also to inculcate all the life skills and other qualities that are required to secure admission. I possess excellent communication skills, am a good team player, and have the ability to critically examine any situation and take decisions empathetically and reasonably. I also participated in the research project and did a 6 months internship as part of my degree to gain the best possible from my academics and beyond them from my education.

Now I have cleared the standardized tests also with very good grades and feel that I am absolutely ready for advanced education. I am enclosing all my relevant documents, transcripts, certificates, and achievements along with this application and I'm quite hopeful that I'll be able to get a positive outcome of my application.
