SET 55/1/P

Q. No.	**Expected Answer / Value Points**	**Marks**	**Total Marks**
	Section A		
Set-1, Q1 Set-2, Q5 Set-3, Q2	The emf of a cell is equal to the terminal voltage when the circuit is open. **Alternatively** The emf of a cell is greater than the terminal voltage when current is drawn through the cell. **Alternatively** The emf of a cell is less than the terminal voltage when the cell is being charged. **Alternatively** $\varepsilon = V + ir \quad \varepsilon = V \quad \text{when } i = 0$ $\varepsilon > V \quad \text{when } i > 0$ $\varepsilon < V \quad \text{when } i < 0$ **Alternatively** Emf of cell is work done by the cell force (of non-electrostatic origin) per unit charge, as charges are transferred through the cell. The terminal voltage is work done by the force of electric field per unit charge as charge move across the terminals of the cell through the external circuit. (Award this 1mark if the student distinguishes between emf and terminal voltage in any one of the ways given above)	1 or 1 or 1 or 1 or 1	1
Set-1, Q2 Set-2, Q4 Set-3, Q5	The kinetic energy of a negative charge decreases in going from point B to point A in the given field configuration. **Alternatively** Decreases	1 or 1	1
Set-1, Q3 Set-2, Q2 Set-3, Q4	A repeater picks up a signal, amplifies it, and re transmits it, thereby extending the range of a communication system. **Alternatively** Amplifies and retransmits the signal.	1 Or 1	1
Set-1, Q4 Set-2, Q3 Set-3, Q1	Concave Lens **Alternatively** It can be convex when the ambience is of higher refractive index. (Award one mark if the student writes the lens as a convex lens and gives the reason for this)	1 Or 1	1

Set-1, Q5 Set-2, Q1 Set-3, Q3	 (Award ½ mark if the student just writes $X_C = \frac{1}{wc}$ but does not draw the graph)	1	1
Section B			
Set-1, Q6 Set-2, Q7 Set-3, Q10	Writing the two equations: ½ + ½ Values of R & S: ½ + ½ $\frac{R}{S} = \frac{40}{60} \Rightarrow 3R = 2S$ ---(i) $\frac{R+10}{S} = \frac{60}{40} \Rightarrow 2R + 20 = 3S$ ---------------------------(ii) Simultaneously solving the equations we get $R = 8\Omega$ and $S = 12\Omega$	½ ½ ½ + ½	
Set-1, Q7 Set-2, Q10 Set-3, Q8 .	Writing $\mu = \frac{1}{sin\, i_c}$ ½ Calculating V ½ Writing Yes or Depends ½ Reason ½ $i + e = A + D$ $\frac{3}{4}A + \frac{3}{4}D = A + D$ $D = \frac{1}{2}A = \frac{1}{2} \times 60° = 30°$ **Or** $\mu = \frac{1}{sin^i c} = \frac{1}{sin45°} = \sqrt{2}$ $V = \frac{C}{\mu} = \frac{3 \times 10^8}{\sqrt{2}} m/s$	1 ½ ½ ½ ½	2

	$= 2.1 \times 10^8 m/s$ (also accept $V = (\frac{3}{\sqrt{2}}) \times 10^8 m/s$) Yes (or Depends) Reason: μ depends upon λ, the wavelength of the incident light (or $\mu = A + \frac{B}{\lambda^2}$)	 ½ ½	 2
Set-1, Q8 Set-2, Q6 Set-3, Q9 .	Writing $2\pi r = n\lambda$ ½ De Broglie formula $\lambda = \frac{h}{p}$ ½ Getting Bohr's second postulate 1 For a stationary state $2\pi r = n\lambda$ ....(i) By De-Broglie hypothesis wavelength of electron-wave is $\lambda = \frac{h}{p}$ ....(ii) Equation (i) and (ii) give $rp = n\frac{h}{2\pi}$ i.e. $l = \frac{nh}{2\pi}$ ($\because l = pr$) which is Bohr's second postulate of quantization of angular momentum.	 ½ ½ ½ ½	 2
Set-1, Q9 Set-2, Q8 Set-3, Q7	In ground wave communication, the e.m. wave glides over the earth's surface. At high frequencies, the rate of energy dissipation of the signal increases and the signal gets attenuated over a short distance. **Alternatively** As the ground wave glides over the earth surface, its changing magnetic field induces an electric current, on the surface. At higher frequency the rate of variation (of magnetic field) is larger inducing a larger current, so energy dissipation of the signal is more. So the higher the frequency the more rapid is the signal alternation.	1 1 or 1 1	 2
Set-1, Q10 Set-2, Q9 Set-3, Q6	Photon: $h\nu = \frac{hc}{\lambda} = E$ ½ Electron: $\lambda = \frac{h}{P}$ ½ Calculating P 1 Photon: $h\nu = E = \frac{hc}{\lambda}$ $or \lambda = \frac{hc}{E}$ Electron: $\lambda = \frac{h}{p}$ $\therefore \frac{h}{p} = \frac{hc}{E}$ or $p = \frac{E}{c} = 2 \times 10^{-25} kg\ ms^{-1}$	 ½ ½ 1	 2

Section C

Set-1, Q11 Set-2, Q20 Set-3, Q15	Finding Equivalent Capacitance 2 Finding Charge ½ Finding Energy ½ The equivalent setup is  Here $V_A = V_B$(A & B are at the same potential) so the bridge capacitor can be removed. (i) Q= CV = 6 μc (ii) $U = \frac{1}{2} qV = 18 \mu J$ **NOTE:** (i) In case the student gets an incorrect answer for the equivalent capacitance (C_{eq}) but uses his/her calculated value of C_{eq} to correctly calculate the (i) Charge and (ii) stored energy, award him/her ½+½ marks respectively. (ii) If a student just writes the formulae q = C_{eq}V and $u = \frac{1}{2} C_{eq} V^2$ but does not do the calculations, award him/her a total of ½ marks for the second part of the question.	2 ½ ½	3
Set-1, Q12 Set-2, Q21 Set-3, Q16	Principle 1 Two Factors ½+½ Reason for preference 1 <u>Principle:</u> The potential drop, across a part of a length l of a uniform wire of length L (L>l), is proportional to the length l. <u>Two factors:</u> (i) increasing the length L of the wire (ii) connecting a suitable resistance, R, in series with the potentiometer wire. <u>Reason:</u> At the balance position, there is no net current drawn, from the cell and the cell is effectively in an open circuit condition. This is not so for a voltmeter.	1 ½ ½ ½ ½	3

Set-1, Q13 Set-2, Q22 Set-3, Q17	(a) Definition — 1 (b) (i) Number of photons comparison — ½ Reason — ½ (iii) Maximum K.E. — ½ Reason — ½ a) Intensity of radiation is determined by the number of photons incident per unit area per unit time. b) (i) Red Light Reason: Energy of photon of red light is less than that of a photon of blue light (**Alternative** $h\nu_{red} < h\nu_{blue}$) (ii) Blue Light Reason: Energy of photon of Blue light is more than that of a photon of red light (**Alternative** $h\nu_{blue} > h\nu_{red}$) Note: [If the student writes the Einstein's photoelectric equation: $h\nu = h\nu_0 + \frac{1}{2}mv_{max}^2$ Instead of the reason in part (ii) award him/her ½ mark only.]	 1 ½ ½ ½ ½	3
Set-1, Q14 Set-2, Q16 Set-3, Q18	(a) Two reasons — ½+½ (b) Writing mirror equation — ½ (c) Proving the given result — 1½ Reasons: Reflecting telescopes can be made to have (i) Larger light gathering power (ii) Better resolution (Also: less expensive; easier to design; free from aberrations) (any two) $\frac{1}{v} + \frac{1}{u} = \frac{1}{f} \Rightarrow v = \frac{uf}{u-f}$ …..(i) As 'u' is always –ve for a real object and 'f'is +ve for a convex mirror (as per Cartesian sign convention) ∴ v is always +ve. Hence, the image is always on the other side of the mirror (and hence, virtual for all u)	 ½ ½ ½ ½ ½ ½	3
Set-1, Q15 Set-2, Q17 Set-3, Q11	Statement of the law — 1 Example — 1 Numerical — 1 Lenz's law applies to closed circuit determining the direction of induced current states "The induced emf will appear in such a direction that it opposes the change that produced it."	1	

	 (Also accept any other example appropriate) $\|\varepsilon\| = L\frac{di}{dt}$ $\|\varepsilon\| = 5 \times 10^{-3} \times \frac{(4-1)}{30 \times 10^{-3}} V = 0.5V$ **OR** Difference and Explanation 1½ Formula ½ Calculation and result 1 In magnetism, Gauss's law states: $\oint \vec{B}.\vec{ds} = 0$ In electrostatistics, Gauss's law states: $\oint \vec{E}.\vec{ds} = \frac{q}{\varepsilon_o}$ Reason: Isolated magnetic poles do not exist $B = \frac{\mu_0}{4\pi}\left(\frac{m}{R^3}\right) = 10^{-7}\left(\frac{m}{R^3}\right)$ $m = \frac{0.4 \times 10^{-4} \times (6400 \times 10^3)^3}{10^{-7}}$ $= 1.1 \times 10^{23}$ Am^2	½ ½ 1 ½ ½ ½ ½ ½. ½	3 3
Set-1, Q16 Set-2, Q18 Set-3, Q12	Production ½ Source of Energy ½ Schematic Sketch ½ Directions of $\vec{E}$ and $\vec{B}$: ½+½ Relation ½ Production: Electromagnetic waves are produced by 'accelerated Charges' The battery/ Electric field that accelerates the charge carriers is the source of energy of em waves.	½ ½

Set-2, Q19
Set-3, Q13

</td>
<td>

Writing the formula: $N = N_0 e^{-\lambda t}$	½
Obtaining the Relation	1
Numerical	1½

We have $N = N_0 e^{-\lambda t}$

When $t = T_{\frac{1}{2}}$ (the half life), we have $N = \frac{N_0}{2}$

$$\therefore \frac{N_0}{2} = N_0 e^{-\lambda T_{\frac{1}{2}}}$$

This gives

$$T_{\frac{1}{2}} = \frac{ln_e^2}{\lambda}$$

Numerical: We have $\frac{N}{N_o} = 6.25\% = \frac{6.25}{100} = \frac{1}{16} = \left(\frac{1}{2}\right)^4$

∴ Required time = 4 × (half life)
= 4 × 100 days
= 400 days

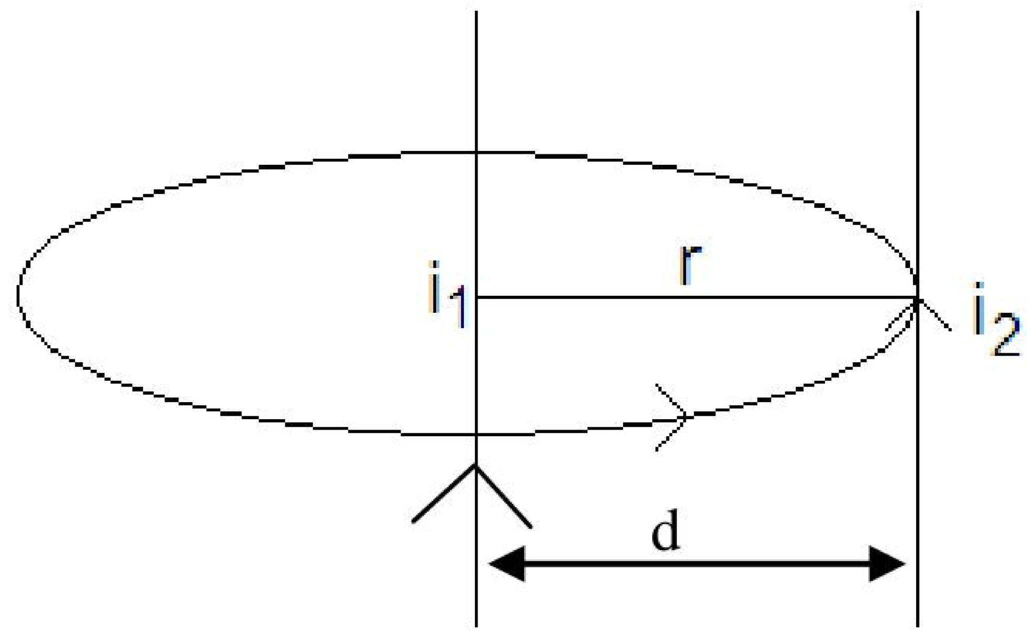
	(Award ½ mark even if the student writes only one of these) <u>Circuit diagram</u>  Zener diode as DC voltage regulatr <u>Principle:</u> Even small reverse bias voltage (5V) can produce a very high electric field because the depletion region is very thin Working - The unregulated DC voltage is connected to the Zener diode through a series resistance R_S such that the Zener diode is reverse biased. In break down region, the Zener voltage remains constant even though the current through Zener diode changes. This helps to regulate the output voltage	½ ½ 1	3
Set-1, Q19 Set-2, Q12 Set-3, Q21	Energy band diagrams 1½ Effect of change of temperature 1½  (i) (ii) (iii) (i) In conductor, collision become more frequent at higher temperature lowering conductivity. (ii) In semiconductors , more electron hole pairs become available at higher temperature so conductivity increases. (iii) In insulators , the band gap is unsurpassable for ordinary temperature rise. Hence there is practically no change in their behavior.	½+½+½ ½ ½ ½	3
Set-1, Q20 Set-2, Q13 Set-3, Q22	(a) Three Basic units & their function ½+½+½ (b) Three applications of Internet ½+½+½ <u>Three Basic units</u> Transmitter: Processing & transmission of message signal	½	

	Communication channel: The link for propagating the signal from transmitter to receiver. Receiver: Extracting the message signal from the signal received by it. Three applications of internet: (i) internet surfing (ii) E-mails (iii) E-banking (iv) E-shopping (v) E-booking (e-ticketing) (vi) Social networking + additional applications(Any three)	½ ½ ½ + ½ + ½	3
Set-1, Q21 Set-2, Q14 Set-3, Q19 .	(a) Conditions ½ (b) Formula ½ Graph 1 Effect on Fringe Width ½ Information from scope ½		
	<u>Conditions:</u> The two superposing sources must be coherent and obtained from the same source. (Also award this ½ mark is the student just writes that two sources must have the same frequency) <u>Formula:</u> $\beta = \frac{\lambda D}{d}$  Slope = $\frac{\lambda}{d}$ $or\ \lambda = slope \times d$ Effect: the fringe width would increase (Alternatively : $\beta \propto \frac{1}{d}$)	½ ½ 1 ½ ½	3

Set-1, Q22 Set-2, Q15 Set-3, Q20 .	Graph 1 (a) Sharper resonance ½+½ (Case + reason) (b) More power Dissipation case ½ Reason ½		
		1	
	(a) Sharper for R = R_2 Sharpness of reasonance = $\frac{\omega_o L}{R} \propto \frac{1}{R}$ (b) More power dissipation for R = R_2 At Resonance, power dissipation = $\frac{V^2}{R} \propto \frac{1}{R}$ (for same V)	½ ½ ½ ½	3
	Section D		
Set-1, Q23 Set-2, Q23 Set-3, Q23 .	(a) Values 1+1 (b) Reason 1 (c) Explanation 1		
	(a) Presence of mind, careful, helpful/Awareness etc. (any two).	½+½	
	(b) The two feet of the bird, sitting on the live wire, are at the same potential. Hence, no current passes through its body.	½	
	The potential difference between the earth and the live wire when somebody touches a live wire, standing on the ground can result in a passage of current, so a fatal shock.	1	
	(c) Transmitting the power at a very high voltage is equivalent to lowering the current to a very low level, so Transmission losses $(= i^2 R)$ are minimized.	½ ½	4
	Section E		
Set-1, Q24 Set-2, Q26 Set-3, Q25	Obtaining the expression for magnetic field 2 Diagram & Force (magnitude & direction) ½+½+½ Change in nature of force ½ Definition of SI unit of current 1		



½

Consider a (circle) Amperian loop of radius ‘d’ centered at the wire ‘i’ and having its plane perpendicular to the wire. ½

$$\oint \vec{B}.\vec{dl} = \mu_0 i_1$$

By symmetry B has the same magnitude at every point on the contour, and is tangential. If we go along the contour anticlockwise, $\vec{B}$ is along $\vec{dl}$ and $\vec{B}.\vec{dl} = Bdl$ ½

$$B\oint dl = \mu_0 i, \qquad B 2\pi d = \mu_0 i_1$$ ½

$$\therefore B_i = \frac{\mu_0 i_1}{2\pi d}$$ ½

Now $\vec{F}_{2i} = i_2 \vec{l}_2 \times \vec{B}_i$ $\therefore$

$$F_{2i} = i_2 l_2 B = \frac{\mu_0 i_1 i_2 l_2}{2\pi d}$$ (substituting the value of B)

$$\therefore \frac{Force}{Length} = \frac{\mu_0 i_1 i_2}{2\pi d}$$

$\vec{F}$ is directed towards left so wire ‘2’ is attracted by the force of magnetic field of wire ‘l’, acting on it. ½ ½

If I, reverses direction, $\vec{F}$ is directed toward right i.e. wire 1 repels wire 2`.

If $i_1 = i_2 = 1$ amp and d = 1m then $\frac{F}{l} = \frac{\mu_0}{2\pi}\ N/m$

$= 2 \times 10^{-7}$ N/m 1

Or

a) Two reasons	1+1
b) Finding the Net Electric Field	3

(a)

			
	The figure shows two surfaces A and B of different shapes and sizes enclosing a given charge +Q.		
	(i) For a given charge, the number of field lines, emanating from it, depends only on the net charge enclosed and not on the shape or size of surface enclosing it.	1	
	(ii) By Gauss's law of electrostatics, the outward flux of the electric field is the $\oint \vec{E}.d\vec{s} = \frac{Q}{\varepsilon_0}$. This is same for both the surfaces, since both enclose the same charge (Q).	1	
			
	(b) Field of the centre of loop 1, due to its own charge = zero (This is because each element of the loop, has a corresponding symmetrical element which produces an equal and opposite fields at the centre)	1	
		½	5

For finding the field at O_1, due to coil 2

Total field at O_1 due to two elements dl_1 and dl_2 of coil 2.

= sum of their horizontal components

$= \frac{1}{4\pi\varepsilon_0} \cdot \frac{2\lambda dl}{(2R)^2} \cos\theta = \frac{1}{4\pi\varepsilon_0} \cdot \frac{2\lambda dl}{(2R)^2} \cdot \frac{R\sqrt{3}}{R}$

$$\frac{1}{4\pi\varepsilon_0} \cdot \frac{2\lambda dl}{(2R)^2} \cdot \frac{\sqrt{3}}{2}$$ ½

$\therefore$ Total field at O_1 $= \frac{\sqrt{3}}{4\pi\varepsilon_0} \cdot \frac{\lambda}{4R^2} \cdot (\sum dl)_{over\ half\ the\ loop}$ ½ ½

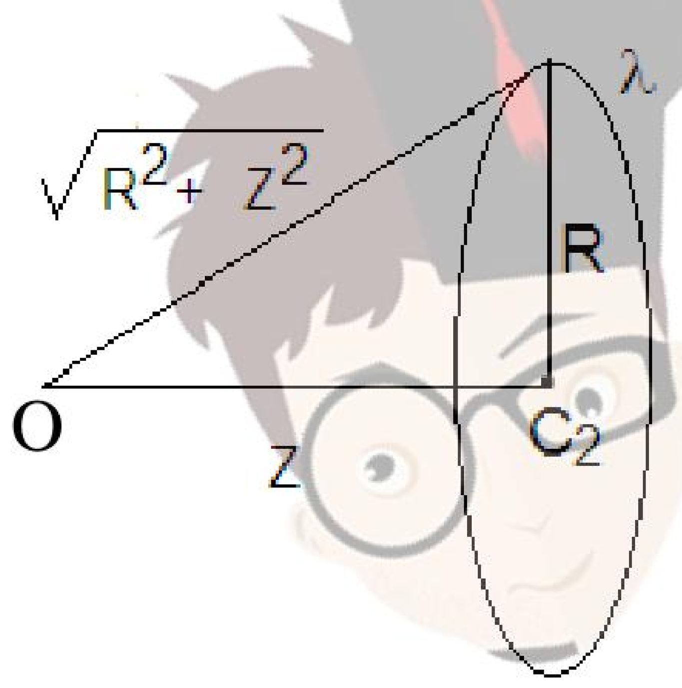
$= \frac{\sqrt{3}}{4\pi\varepsilon_0} \cdot \frac{\lambda}{4R^2} \cdot \pi R$ 3

$= \frac{1}{4\pi\varepsilon_0} \cdot \frac{\sqrt{3}\pi\lambda}{4R} = \frac{\sqrt{3}\pi\lambda}{16\varepsilon_0 R}$

This field, as seen from above, is directed along the line $O_2 O_1$.

$\therefore$ Total field at O_1 due to both the coils $O_1 = \frac{1}{4\pi\varepsilon_0}\left[\frac{(\pi\sqrt{3})\lambda}{4R}\right]$ (along $O_2 O_1$) 5

Alternatively



1

The field at an axial point of a circular loop of radius R and linear charge density λ, is given by ½

$$\vec{E} = \frac{\lambda R}{2\epsilon_0} \frac{Z}{(R^2 + Z^2)^{3/2}} \hat{z}$$ ½

The field at C

is $\vec{E} = \vec{E}_1 + \vec{E}_2 = 0 + \frac{\lambda R}{2\epsilon_0} \frac{R\sqrt{3}}{(2R)^3}$ towards left ½

$= \frac{\lambda\sqrt{3}}{16\epsilon_0 R}$ towards left. ½

($\vec{E}_1 = 0$ since $z = 0$)

	($\vec{E}_2$ is towards left because λ is (+)ve)		
Set-1, Q26 Set-2, Q25 Set-3, Q24	(a) Diagram 1 Proving $\frac{v_2}{v_1} = \frac{sin_i}{sin_r}$ 2 (b) (i) Reason 1 (ii)Brewster law 1		
		1	
	(a) We consider refraction of a plane wave at a rarer medium, i.e., $v_1 > v_2$ The angle of refraction will be greater than angle of incidence. $n_1 \sin i = n_2 \sin r$ $\sin i_c = \frac{n_2}{n_1}$ $\therefore \frac{n_2}{n_1} = \frac{\sin i}{\sin r}$	½	
	But $\frac{n_2}{n_1} = ratio\ of\ speed\ of\ lights$ $\therefore \frac{v_2}{v_1} = \frac{\sin i}{\sin r}$	½	2
	(i) It absorbs the electric vectors of the incident light along the direction of alignment of its molecules and only lets the perpendicular electric vectors to go through.	½	1
	(ii) At the Brewster's angle of incidence ($\angle i_B$) $\angle i_B + \angle r_B = \frac{\pi}{2}$	½	

$$\therefore \mu = \frac{\sin i_B}{\sin r_B} = \tan i_B (\frac{1}{2})$$

This is known as Brewsters's Law. ½

Or

Equivalent Focal Length	2½
Obtaining the condition	1
Nature of combination + Ray diagram	1
Nature of image	½

½

2

The image distance V_1 for the surface is the object distance for the second surface, Radius of curvature of the first surface is R that of the second surface is –R

$$\frac{\mu_1}{V_1} - \frac{1}{u} = \frac{\mu_1 - 1}{R} \quad \text{(Refraction at first surface)}$$

$$\frac{\mu_2}{V} - \frac{\mu_1}{V_1} = \frac{\mu_2 - \mu_1}{-R} \quad \text{(Refraction at second surface)}$$ ½

$$\therefore \frac{\mu_2}{V} - \frac{1}{u} = \frac{2\mu_1 - \mu_2 - 1}{R}$$

At $u = -\infty$ $V = f$

$$\therefore f = \frac{\mu_2 R}{2\mu_1 - \mu_2 - 1}$$

5

(b) For the combination to be diverging

$f < 0$

This requires $\mu_1 < (\frac{\mu_2 + 1}{2})$ ½

(c) for $\mu_1 > \frac{\mu_2 + 1}{2}$, $f > 0$

So the combination acts as a converging lens

(of focal length $f = \frac{\mu_2 R}{2\mu_1 - \mu_2 - 1}$).

½

	 The image formed is a real image.	½	5
