## TIME, DISTANCE AND SPEED

## Definition

| Speed: | It is defined as the rate of travel to cover a certain distance. It is generally <br> expressed in $\mathrm{m} / \mathrm{s}, \mathrm{km} / \mathrm{hr}$ etc. |
| :--- | :--- |
| Time: | It is defined as the duration for which travelling has been done to cover a <br> certain distance. It is generally expressed in seconds, hours etc. |
| Distance: | It is defined as the length of path for which travelling has been done. It is <br> generally expressed in metre, kilometre etc. |

Speed $=\frac{\text { Distance }}{\text { Time }}$

## Unit Conversions

1) $\mathrm{km} / \mathrm{hr}$ to $\mathrm{m} / \mathrm{s}$
$\mathrm{X} \mathrm{km} / \mathrm{hr}=\left(\mathrm{X} \times \frac{5}{18}\right) \mathrm{m} / \mathrm{sec}$

## Q-1. Convert 54 km/hr into

$\mathrm{m} / \mathrm{sec}$.

## Solution:

$54 \mathrm{~km} / \mathrm{hr}=54 \times 5 / 18=15 \mathrm{~m} / \mathrm{sec}$
2) $\mathrm{m} / \mathrm{s}$ to $\mathrm{km} / \mathrm{hr}$
$X \mathrm{~m} / \mathrm{Sec}=\left(\mathrm{X} \times \frac{18}{5}\right) \mathrm{Km} / \mathrm{hr}$

## Q2. A car goes $\mathbf{2 0}$ meters in a second. Find its speed in $\mathbf{k m} / \mathrm{hr}$.

## Solution:

$20 \mathrm{~m} / \mathrm{sec}=20 \times 18 / 5=72 \mathrm{~km} / \mathrm{hr}$.

## Ratios of Speed, Distance and/or Time

If the ratio of the speeds of $A$ and $B$ is $a: b$, then the ratio of the times take by them to cover the same distance will be $\frac{1}{a}: \frac{1}{b}$ or b : a .
Q-3. The speed of three cars is in the ratio 5: 4: 6. The ratio between the time taken by them to travel the same distance is

## Solution:

Ratio of time taken $=1 / 5: 1 / 4: 1 / 6=12: 15: 10$

## Average Speed

Q4. A truck covers a distance of 1200 km in $\mathbf{4 0}$ hours. What is the average speed of the truck? Solution:
Average speed $=$ Total distance travelled/Total time taken
$\Rightarrow$ Average speed $=1200 / 40$
$\therefore$ Average speed $=30 \mathrm{~km} / \mathrm{hr}$.

Q5. A man travelled 12 km at a speed of $4 \mathrm{~km} / \mathrm{h}$ and further 10 km at a speed of 5 $\mathrm{km} / \mathrm{hr}$. What was his average speed?

## Solution:

Total time taken $=$ Time taken at a speed of $4 \mathrm{~km} / \mathrm{h}+$ Time taken at a speed of $5 \mathrm{~km} / \mathrm{h}$
$\Rightarrow 12 / 4+10 / 5=5$ hours [ $\because$ Time $=$ Distance $/$ Speed $]$ Average
speed $=$ Total distance/Total time
$\Rightarrow(12+10) / 5=22 / 5=4.4 \mathrm{~km} / \mathrm{h}$

Q6. Rahul goes Delhi to Pune at a speed of $50 \mathrm{~km} / \mathrm{h}$ and comes back at a speed of $75 \mathrm{~km} / \mathrm{h}$. Find his average speed of the journey.

## Solution:

As, distance is same both cases
$\Rightarrow$ Required average speed $=(2 \times 50 \times 75) /(50+75)=7500 / 125=60 \mathrm{~km} / \mathrm{hr}$.

## Practice Questions:

Q1.The speeds of the Shaan and Rohan are $50 \mathrm{~km} / \mathrm{h}$ and $30 \mathrm{~km} / \mathrm{h}$ respectively. Initially Shaan is at a place $\mathbf{N}$ and Rohan is at a place $\mathbf{M}$. The distance between $\mathbf{M}$ and $\mathbf{N}$ is 710 km. Shaan started his journey 3 hours earlier than Rohan to meet each other. If they meet each other at a place $R$ somewhere between $M$ and $N$. then the distance between $R$ and $N$ is
A) 210 km
B) 500 km
C) 430 km
D) 620 km
E) None of these

Ans: (B) 500km

Q2. The distance between two places $A$ and $B$ is 370 km . The 1st car departs from place $A$ to $B$, at a speed of 80 kmph at 10 am and the 2 nd car departs from place $B$ to $A$ at a speed of 50 kmph at 1 pm . At what time both cars meet each other?
A) $2: 30 \mathrm{pm}$
B) $2: 00 \mathrm{pm}$
C) $2: 10 \mathrm{pm}$
D) $2: 20 \mathrm{pm}$
E) None of these

Ans: (B) 2:00pm

Q3. A man takes 5 hours 45 minutes to walk to a certain place and ride back. He would have saved $\mathbf{2}$ hours had he ridden both ways. The time he would take to walk both ways is
A) 3 hours 45 minutes
B) 7 hours 30 minutes
C) 7 hours 45 minutes
D) 11 hours 45 minutes
E) None of these

Q4. A and B start at the same time with speeds of $40 \mathrm{~km} / \mathrm{hr}$ and $50 \mathrm{~km} / \mathrm{hr}$ respectively. If in covering the journey $A$ takes 15 minutes longer than $B$, the total distance of the journey is
A) 46 km
B) 48 km
C) 50 km
D) 52 km
E) None of these

Ans: (C) 50km

Q5. A cyclist covers a distance of 750 m in 2 min 30 sec . What is the speed in $\mathrm{km} / \mathrm{hr}$ of the cyclist?
A) $12 \mathrm{~km} / \mathrm{hr}$
B) $15 \mathrm{~km} / \mathrm{hr}$
C) $18 \mathrm{~km} / \mathrm{hr}$
D) $20 \mathrm{~km} / \mathrm{hr}$

Ans: (C) $18 \mathrm{~km} / \mathrm{hr}$

Q6. A Jackal takes 4 leaps for every 5 leaps of goat but 3 leaps of a Jackal are equal to 4 leaps of the goat. compare their speeds
A) $12: 10$
B) $7: 5$
C) $1: 4$
D) $16: 15$

Ans: (D) 16:15
