

## Chapter Eight

# ELECTROMAGNETIC WAVES

### MCQ I

- 8.1** One requires 11eV of energy to dissociate a carbon monoxide molecule into carbon and oxygen atoms. The minimum frequency of the appropriate electromagnetic radiation to achieve the dissociation lies in
- (a) visible region.
  - (b) infrared region.
  - (c) ultraviolet region.
  - (d) microwave region.
- 8.2** A linearly polarized electromagnetic wave given as  $\mathbf{E} = E_0 \hat{\mathbf{i}} \cos(kz - \omega t)$  is incident normally on a perfectly reflecting infinite wall at  $z = a$ . Assuming that the material of the wall is optically inactive, the reflected wave will be given as
- (a)  $\mathbf{E}_r = -E_0 \hat{\mathbf{i}} \cos(kz - \omega t)$ .
  - (b)  $\mathbf{E}_r = E_0 \hat{\mathbf{i}} \cos(kz + \omega t)$ .

(c)  $\mathbf{E}_r = -E_0 \hat{\mathbf{i}} \cos(kz + \omega t)$ .

(d)  $\mathbf{E}_r = E_0 \hat{\mathbf{i}} \sin(kz - \omega t)$ .

**8.3** Light with an energy flux of  $20 \text{ W/cm}^2$  falls on a non-reflecting surface at normal incidence. If the surface has an area of  $30 \text{ cm}^2$ , the total momentum delivered (for complete absorption) during 30 minutes is

- (a)  $36 \times 10^{-5} \text{ kg m/s}$ .
- (b)  $36 \times 10^{-4} \text{ kg m/s}$ .
- (c)  $108 \times 10^4 \text{ kg m/s}$ .
- (d)  $1.08 \times 10^7 \text{ kg m/s}$ .

**8.4** The electric field intensity produced by the radiations coming from 100 W bulb at a 3 m distance is  $E$ . The electric field intensity produced by the radiations coming from 50 W bulb at the same distance is

- (a)  $\frac{E}{2}$ .
- (b)  $2E$ .
- (c)  $\frac{E}{\sqrt{2}}$ .
- (d)  $\sqrt{2}E$ .

**8.5** If  $\mathbf{E}$  and  $\mathbf{B}$  represent electric and magnetic field vectors of the electromagnetic wave, the direction of propagation of electromagnetic wave is along

- (a)  $\mathbf{E}$ .
- (b)  $\mathbf{B}$ .
- (c)  $\mathbf{B} \times \mathbf{E}$ .
- (d)  $\mathbf{E} \times \mathbf{B}$ .

**8.6** The ratio of contributions made by the electric field and magnetic field components to the intensity of an EM wave is

- (a)  $c : 1$
- (b)  $c^2 : 1$
- (c)  $1 : 1$
- (d)  $\sqrt{c} : 1$

**8.7** An EM wave radiates outwards from a dipole antenna, with  $E_0$  as the amplitude of its electric field vector. The electric field  $E_0$  which

transports significant energy from the source falls off as

- (a)  $\frac{1}{r^3}$
- (b)  $\frac{1}{r^2}$
- (c)  $\frac{1}{r}$
- (d) remains constant.

## MCQ II

**8.8** An electromagnetic wave travels in vacuum along z direction:  $\mathbf{E} = (E_1\hat{\mathbf{i}} + E_2\hat{\mathbf{j}}) \cos(kz - \omega t)$ . Choose the correct options from the following:

(a) The associated magnetic field is given as

$$\mathbf{B} = \frac{1}{c}(E_1\hat{\mathbf{i}} - E_2\hat{\mathbf{j}}) \cos(kz - \omega t).$$

(b) The associated magnetic field is given as

$$\mathbf{B} = \frac{1}{c}(E_1\hat{\mathbf{i}} + E_2\hat{\mathbf{j}}) \cos(kz - \omega t).$$

- (c) The given electromagnetic field is circularly polarised.
- (d) The given electromagnetic wave is plane polarised.

**8.9** An electromagnetic wave travelling along z-axis is given as:  $\mathbf{E} = \mathbf{E}_0 \cos(kz - \omega t)$ . Choose the correct options from the following:

(a) The associated magnetic field is given as  $\mathbf{B} = \frac{1}{c}\hat{\mathbf{k}} \times \mathbf{E} = \frac{1}{\omega}(\hat{\mathbf{k}} \times \mathbf{E})$ .

(b) The electromagnetic field can be written in terms of the associated magnetic field as  $\mathbf{E} = c(\mathbf{B} \times \hat{\mathbf{k}})$ .

(c)  $\hat{\mathbf{k}} \cdot \mathbf{E} = 0, \hat{\mathbf{k}} \cdot \mathbf{B} = 0$ .

(d)  $\hat{\mathbf{k}} \times \mathbf{E} = 0, \hat{\mathbf{k}} \times \mathbf{B} = 0$ .

**8.10** A plane electromagnetic wave propagating along x direction can have the following pairs of  $\mathbf{E}$  and  $\mathbf{B}$

- (a)  $E_x, B_y$ .
- (b)  $E_y, B_z$ .
- (c)  $B_x, E_y$ .
- (d)  $E_z, B_y$ .

- 8.11** A charged particle oscillates about its mean equilibrium position with a frequency of  $10^9$  Hz. The electromagnetic waves produced:
- will have frequency of  $10^9$  Hz.
  - will have frequency of  $2 \times 10^9$  Hz.
  - will have a wavelength of 0.3 m.
  - fall in the region of radiowaves.
- 8.12** The source of electromagnetic waves can be a charge
- moving with a constant velocity.
  - moving in a circular orbit.
  - at rest.
  - falling in an electric field.
- 8.13** An EM wave of intensity  $I$  falls on a surface kept in vacuum and exerts radiation pressure  $p$  on it. Which of the following are true?
- Radiation pressure is  $I/c$  if the wave is totally absorbed.
  - Radiation pressure is  $I/c$  if the wave is totally reflected.
  - Radiation pressure is  $2I/c$  if the wave is totally reflected.
  - Radiation pressure is in the range  $I/c < p < 2I/c$  for real surfaces.

### VSA

- 8.14** Why is the orientation of the portable radio with respect to broadcasting station important?
- 8.15** Why does microwave oven heats up a food item containing water molecules most efficiently?
- 8.16** The charge on a parallel plate capacitor varies as  $q = q_0 \cos 2\pi vt$ . The plates are very large and close together (area =  $A$ , separation =  $d$ ). Neglecting the edge effects, find the displacement current through the capacitor?
- 8.17** A variable frequency a.c source is connected to a capacitor. How will the displacement current change with decrease in frequency?
- 8.18** The magnetic field of a beam emerging from a filter facing a floodlight is given by  
 $B_0 = 12 \times 10^{-8} \sin (1.20 \times 10^7 z - 3.60 \times 10^{15} t)$  T.  
 What is the average intensity of the beam?
- 8.19** Poynting vectors  $\mathbf{S}$  is defined as a vector whose magnitude is equal to the wave intensity and whose direction is along the direction of wave propagation. Mathematically, it is given by  $\mathbf{S} = \frac{1}{\mu_0} \mathbf{E} \times \mathbf{B}$ . Show the nature of  $S$  vs  $t$  graph.

- 8.20** Professor C.V Raman surprised his students by suspending freely a tiny light ball in a transparent vacuum chamber by shining a laser beam on it. Which property of EM waves was he exhibiting? Give one more example of this property.

## SA

- 8.21** Show that the magnetic field  $B$  at a point in between the plates of a parallel-plate capacitor during charging is  $\frac{\epsilon_0 \mu_r}{2} \frac{dE}{dt}$  (symbols having usual meaning).
- 8.22** Electromagnetic waves with wavelength
- (i)  $\lambda_1$  is used in satellite communication.
  - (ii)  $\lambda_2$  is used to kill germs in water purifiers.
  - (iii)  $\lambda_3$  is used to detect leakage of oil in underground pipelines.
  - (iv)  $\lambda_4$  is used to improve visibility in runways during fog and mist conditions.
- (a) Identify and name the part of electromagnetic spectrum to which these radiations belong.
- (b) Arrange these wavelengths in ascending order of their magnitude.
- (c) Write one more application of each.
- 8.23** Show that average value of radiant flux density 'S' over a single period 'T' is given by  $S = \frac{1}{2c\mu_0} E_0^2$ .
- 8.24** You are given a  $2\mu\text{F}$  parallel plate capacitor. How would you establish an instantaneous displacement current of  $1\text{mA}$  in the space between its plates?
- 8.25** Show that the radiation pressure exerted by an EM wave of intensity  $I$  on a surface kept in vacuum is  $I/c$ .
- 8.26** What happens to the intensity of light from a bulb if the distance from the bulb is doubled? As a laser beam travels across the length of a room, its intensity essentially remains constant.

What geometrical characteristic of LASER beam is responsible for the constant intensity which is missing in the case of light from the bulb?

- 8.27** Even though an electric field  $\mathbf{E}$  exerts a force  $q\mathbf{E}$  on a charged particle yet the electric field of an EM wave does not contribute to the radiation pressure (but transfers energy). Explain.

**LA**

Fig. 8.1

- 8.28** An infinitely long thin wire carrying a uniform linear static charge density  $\lambda$  is placed along the  $z$ -axis (Fig. 8.1). The wire is set into motion along its length with a uniform velocity  $\mathbf{v} = v\hat{\mathbf{k}}_z$ . Calculate

the poynting vector  $\mathbf{S} = \frac{1}{\mu_0}(\mathbf{E} \times \mathbf{B})$ .

- 8.29** Sea water at frequency  $\nu = 4 \times 10^8$  Hz has permittivity  $\epsilon \approx 80 \epsilon_0$ , permeability  $\mu \approx \mu_0$  and resistivity  $\rho = 0.25 \Omega\text{-m}$ . Imagine a parallel plate capacitor immersed in sea water and driven by an alternating voltage source  $V(t) = V_0 \sin(2\pi \nu t)$ . What fraction of the conduction current density is the displacement current density?

- 8.30** A long straight cable of length  $l$  is placed symmetrically along  $z$ -axis and has radius  $a (a \ll l)$ . The cable consists of a thin wire and a co-axial conducting tube. An alternating current  $I(t) = I_0 \sin(2\pi \nu t)$  flows down the central thin wire and returns along the co-axial conducting tube. The induced electric field at a distance  $s$  from the wire inside the cable is  $\mathbf{E}(s, t) = \mu_0 I_0 \nu \cos(2\pi \nu t) \ln\left(\frac{s}{a}\right) \hat{\mathbf{k}}$ .

- (i) Calculate the displacement current density inside the cable.
- (ii) Integrate the displacement current density across the cross-section of the cable to find the total displacement current  $I^d$ .
- (iii) Compare the conduction current  $I_0$  with the displacement current  $I_0^d$ .

- 8.31** A plane EM wave travelling in vacuum along  $z$  direction is given by  $\mathbf{E} = E_0 \sin(kz - \omega t)\hat{\mathbf{i}}$  and  $\mathbf{B} = B_0 \sin(kz - \omega t)\hat{\mathbf{j}}$ .

- (i) Evaluate  $\oint \mathbf{E} \cdot d\mathbf{l}$  over the rectangular loop 1234 shown in Fig 8.2.
- (ii) Evaluate  $\int \mathbf{B} \cdot d\mathbf{s}$  over the surface bounded by loop 1234.

(iii) Use equation  $\oint \mathbf{E} \cdot d\mathbf{l} = \frac{-d\phi_B}{dt}$  to prove  $\frac{E_0}{B_0} = c$ .

(iv) By using similar process and the equation

$$\oint \mathbf{B} \cdot d\mathbf{l} = \mu_0 I + \epsilon_0 \frac{d\phi_E}{dt}, \text{ prove that } c = \frac{1}{\sqrt{\mu_0 \epsilon_0}}$$

**8.32** A plane EM wave travelling along z direction is described by  $\mathbf{E} = E_0 \sin(kz - \omega t)\hat{\mathbf{i}}$  and  $\mathbf{B} = B_0 \sin(kz - \omega t)\hat{\mathbf{j}}$ . Show that

(i) The average energy density of the wave is given by

$$u_{\text{av}} = \frac{1}{4} \epsilon_0 E_0^2 + \frac{1}{4} \frac{B_0^2}{\mu_0}.$$

(ii) The time averaged intensity of the wave is given by

$$I_{\text{av}} = \frac{1}{2} c \epsilon_0 E_0^2.$$
