## 15 — INSTRUMENTATION, ELECTRONICS AND CONTROL ENGINEERING

(Answer ALL questions)

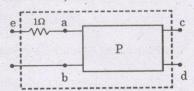

56. The admittance parameter  $Y_{12}$  in the 2-port network in figure is

- 1. -0.2 mho
- 2. 0.1 mho
- 3. -0.05 mho
- 4. 0.05 mho
- 57. In the following figure, C<sub>1</sub> and C<sub>2</sub> are ideal capacitors. C<sub>1</sub> has been charged to 12V before the ideal switch S is closed at t=0. The current i(t) for all t is

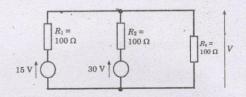

- 1. Zero
- 2. A step function
- 3. An exponentially decaying function
- 4. An impulse function
- 58. The two-port network P shown in the figure has ports 1 and 2, denoted by terminals (a,b) and (c,d), respectively. It has an impedance matrix Z with parameters denoted by Z<sub>ij</sub>. A 1Ω resistor is connected in series with the network at port 1 as shown in the figure. The impedance matrix of the modified two-port network (shown as a dashed box) is

- 1.  $\begin{bmatrix} Z_{11} + 1 & Z_{12} + 1 \\ Z_{21} & Z_{22} + 1 \end{bmatrix}$
- 2.  $\begin{bmatrix} Z_{11} + 1 & Z_{12} \\ Z_{21} & Z_{22} + 1 \end{bmatrix}$
- 3.  $\begin{bmatrix} Z_{11} + 1 & Z_{12} \\ Z_{21} + 1 & Z_{22} \end{bmatrix}$
- $egin{array}{cccc} Z_{11} + 1 & Z_{12} \ Z_{21} & Z_{22} \ \end{array}$

- 59. How much current will flow in a series RL circuit when  $V_T = 200 \, \text{V}$ ,  $X_L = 160 \, \text{G}$   $X_C = 80 \, \Omega$  and  $R = 60 \, \Omega$ ?
  - 1. 2A
  - 2. 1 mA
  - 3. 6.28 A
  - 4. 10 A
- 60. Using superposition theorem, determine the output voltage V of the following circuit

- 1. 30 V
- 2. 15 V
- 3. 45 V
- 4. 7.5 V
- 61.  $x(t) = e^t$  is a signal that has
  - 1. infinite power and energy
  - 2. finite energy and power
  - 3. finite energy and zero power
  - 4. infinite energy and zero power
- 62. For the signal  $e^{j\omega}o^n$  to be periodic with peri N, the condition to be satisfied is (assume is an integer):
  - 1.  $\omega_o = 2\pi m/N$
  - 2.  $2\pi \omega_0 / N = m$
  - 3.  $2\pi/N\omega_0 = m$
  - 4.  $\omega_0 = 2\pi N/m$
- 63. x(n) is called an odd signal if
  - 1. x(n) = (2n+1)x(n)
  - 2. x(n) = -x(-n)
  - 3. x(n) = -x(n)
  - $4. \qquad x(n) = x(-n)$
- 64. The system  $y(t) = \sin(t)x(t)$  is
  - 1. Time invariant and stable
  - 2. Time invariant and unstable
  - 3. Time variant and stable
  - 4. Time variant and unstable

- 65. In linear convolution, the equation  $x(n) * \{h_1(n) + h_2(n)\} = \{x(n) * h_1(n)\} + \{x(n) * h_2(n)\}$  is
  - 1. Associative property
  - 2. Distributive property
  - 3. Additive property
  - 4. Linearity property
- 66. A transistor has current gain of 0.99 in CB mode. Its current gain in CC mode is
  - 1. 99
  - 2. 1.01
  - 3. 0.99
  - 4. 100
- 67. Reverse recovery is nearly zero in
  - 1. Tunnel diode
  - 2. Varactor diode
  - 3. Schottky diode
  - 4. PIN diode
- 68. Assertion (A): The conductivity of p-type semiconductor is higher than that of intrinsic semiconductor.
  - Reason (R): The addition of donor impurity to an intrinsic semiconductor creates additional energy levels below conduction band.

Choose the best statement.

- 1. Both (A) and (R) are True and (R) is the correct explanation of (A)
- 2. Both (A) and (R) are True but (R) is not the correct explanation of (A)
- 3. (A) is True but (R) is False
- 4. (A) is False but (R) is True
- 69. An amplifier without feedback has a voltage gain of 50, input resistance of 1K and output resistance of 2.5 K. If the amplifier is provided current shunt feedback with a feedback factor of 0.2, the input resistance of the feedback amplifier would be:
  - 1. 1/11 K
  - 2. 1/5 K
  - 3. 11 K
  - 4. 5 K
- 70. BJT has input impedance and MOSFET has input impedance.
  - 1. Low and low
  - 2. Low and high
  - 3. High and low
  - 4. High and high

- 71. For the given  $F = \sum X, Y, Z$  (1,2,5,7), find the minimum sum of Products expression
  - 1.  $\overline{X}Y\overline{Z} + \overline{Y}Z$
  - 2.  $X\overline{Z} + \overline{Y}$
  - 3.  $XYZ + XZ + \overline{Y}Z$
  - 4.  $\overline{X}Y\overline{Z} + XZ + \overline{Y}Z$
- 72. How many flip-flops are required to produce a divide-by-128 device?
  - 1. 2
  - 2. 4
  - 3. 6
  - 4. 7
- 73. MOS family that dominates VLSI field is
  - 1. PMQS
  - 2. NMOS
  - 3. CMOS
  - 4. None of above
- 74. The resolution of a 4-bit ADC is 0.5 Volts. For an analog input of 6.7 volts, the digital output of the ADC will be
  - 1. 1011
  - 2. 1101
  - 3. 1111
  - 4. 1000
- 75. The following program starts at location 4100H
  - 4100 LXI SP, 0010
  - 4103 LXI H, 4107
  - 4106 MVI A, 40H
  - 4108 SUB M
  - 4109
  - The content of accumulator when the Program counter reaches 4109H will be
  - 1. 20H
  - 2. 00H
  - 3. 02H
  - 4. FFH
- 76. For a Gaussian distribution, the probable error is r. This means that
  - 1. Area under the curve between ±r limits is 0.5
  - 2. Half of the observed values lie between ±r limits
  - 3. Chances that an additional observation will lie between ±r limits are 50%
  - 4. All of the above
- 77. The high torque to weight ratio in an analog indicating instrument indicates
  - 1. High friction loss
  - 2. Low friction loss
  - 3. Not related to friction loss
  - 4. None of the above

- 78. An electrodynamometer type of instruments finds its major use as
  - 1. Standard instrument only
  - 2. Transfer instrument only
  - 3. Both as standard and transfer instrument
  - 4. A indicator type of instrument
- 79. The power in a 3 phase four wire circuit can be measured by using
  - 1. 2 watt meters
  - 2. 4 watt meters
  - 3. 3 watt meters
  - 4. 1 watt meter
- 80. Maxwell's inductance-capacitance bridge is used for measurement of inductance of
  - 1. Low Q coils
  - 2. Medium Q coils
  - 3. High Q coils
  - 4. Low and medium Q coils
- 81. The bandwidth of a CRO is from 0-20 MHz. The fastest rise time, a sine wave can have to be accurately reproduced by the instrument is
  - 1. 35 ns
  - 2. 35 µs
  - 3. 17.5 ns
  - 4. 0.175 μs
- 82. The lower limit of useful working range of a transducer is determined by
  - 1. Minimum useful input level
  - 2. By transducer error and noise
  - 3. Cross sensitivity
  - 4. Dynamic response
- 83. A digital voltmeter uses an A/D converter which needs a start pulse, uses an analog comparator and has a relatively fixed conversion time independent of the applied voltage. The A/D converter is
  - 1. Successive approximation converter
  - 2. Digital ramp converter
  - 3. Dual slope converter
  - 4. All of the above
- 84. Determine the flow velocity of water of density 1000 kg/m³ at the head of the pitot tube if it produces a pressure difference of 10 KPa between the outlets
  - 1. 7.47 m/s
  - 2. 5.47 m/s
  - 3. 6.47 m/s
  - 4. 4.47 m/s

- 85. The excitation frequency of LVDT is 2 kHz. The maximum frequency of displacement should be limited to
  - 1. 1.5 kHz
  - 2. 200 Hz
  - 3. 1.0 kHz
  - 4. 4.0 kHz
- 86. Square root extractor is needed for
  - 1. Electromagnetic flow meter
  - 2. Ultrasonic flow meter
  - Differential head type flow meter
  - 4. Variable are type flow meter
- 87. When a weir is placed in an open channel, which of these factors is used to determine fluid flow rate?
  - 1. Level
  - 2. Weight
  - 3. Pressure
  - 4. Density
- 88. Standard resistor is made from
  - 1. platinum
  - 2. manganin
  - 3. silver
  - 4. nichrome
- 89. Which transducer is best suited for measuring rapidly changing input?
  - second order transducer with large natural frequency
  - second order transducer with small rise time
  - 3. first order transducer with small time constant
  - 4. zero order transducer
- 90. In an LVDT the harmonics in supply and stray capacitance between primary and secondary causes
  - 1. Phase shift between input voltage and output voltage
  - 2. A non-zero core null position voltage
  - 3. Increase in static sensitivity
  - 4. Decrease in linear range
- In variable head type of flow meters a larg coefficient of discharge means
  - Pressure loss is less and sensitivity of the meter is less
  - 2. Pressure loss is less and sensitivity of the meter is high
  - 3. Pressure loss is high and sensitivity of the meter is less
  - 4. Pressure loss is high and sensitivity of the meter is high

| 92. | will determine the maximum                     | 100. | A carrier is simultaneously amplitude  |

|     | 50   |      | NG 17 (GROUP B)  |

105. Assuming zero initial condition, the response y(t) of the system given below to a unit step input u(t) is

 $U(s) \longrightarrow \frac{1}{s} \longrightarrow Y(s)$ 1. u(t)

- 2. tu(t)
- 3.  $t^2u(t)$
- 4. e<sup>-t</sup> u(t)
- 106. The forward path transfer function of unity feedback control is  $G(s) = \frac{1000}{(1+0.1s)(1+10s)}$  the step, ramp and parabolic error constants
  - 1. 0,1000,0
  - 2. 1000,0,0
  - 3. 0,0,0

are

- 4. 0,0,1000
- 107. The number of roots of the equation  $(2s^4 + s^3 + 3s^2 + 5s + 7) = 0$  that lie in the right half of s plane is
  - 1. Zero
  - 2. One
  - 3. Two
  - 4. Three
- 108. If the controller output changes by 100% for 20% change in control variable the Kp is
  - 1. Zero
  - 2. Unity
  - 3. 5
  - 4. 10
- 109. Larger differential gap in on-off controller leads to
  - increase in frequency of operation of control valve
  - 2. decrease in frequency of operation of control valve
  - 3. no change in frequency of operation of control valve
  - 4. control valve opens to 100%

- 110. Feed forward control is added with feedback control system when
  - 1. Set point changes frequently
  - 2. Load variable changes frequently
  - 3. Process gain changes frequently
  - 4. The process is nonlinear
- 111. Identify the controller that exhibits zero order behavior
  - 1. Integral
  - 2. Proportional
  - 3. Derivative
  - 4. PID
- 112. Identify the timer in which "Output B comes on at a specific set time after output A is turned on. When A is turned off, B also goes off and the accumulated time value is retained even if the input rung is deenergized"
  - 1. ON DELAY timer
  - 2. OFF DELAY timer
  - 3. Retentive ON DELAY timer
  - 4. Non retentive ON DELAY timer
- 113. To simultaneously optimize an interacting dead-time dominant process with multiple constraints, one should use a(n):
  - 1. Override PID control
  - 2. Model predictive control
  - Decoupled PID control
  - 4. PID Controller
- 114. Identify the communication protocol the supports both analog and digit communication
  - 1. ISO/OSI reference model
  - 2. HART
  - 3. Foundation Field Bus
  - 4. MODBUS
- 115. In a \_\_\_\_\_\_ control system, control function is allocated to seve microprocessor-based control units. The control units can manipulate one or m process control loops, perform calculating and detect alarm functions. In this system computer has all of the control responsibility.
  - 1. DDC
  - 2. Supervisory
  - 3. PLC
  - 4. DCS
