## Atmospheric and Oceanic Sciences (XE-H)

Q. 1 - Q. 5 Multiple Choice Question (MCQ), carry ONE mark each (for each wrong answer: - 1/3).

| Q.1 | Western Boundary Current in the ocean is primarily due to |
| ---: | :--- |
| (A) | Ekman pumping. |
| (B) | rotation of the earth. |
| (C) | river water forcing. |
| (D) | ocean floor topography. |

| Q. 2 | The relevant nondimensional number in deciding deepening of the <br> thermocline driven by instability of ocean currents is |
| ---: | :--- |
| (A) | Rossby number. |
| (B) | Reynolds number. |
| (C) | Richardson number. |
| (D) | Ekman number. |

| Q. 3 | During July-August, the highest number of monsoon low pressure systems <br> form over |
| ---: | :--- |
| (A) | Arabian Sea. |
| (B) | Bay of Bengal. |
| (C) | South India. |
| (D) | Himalayan foothills. |

## Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Atmospheric and Oceanic Sciences (XE-H)

| Q. 4 | $\mathrm{CO}_{2}$ concentration in the Earth's atmosphere is increasing because $\mathbf{5 0 \%}$ of the annual anthropogenic emissions are retained in the atmosphere. If nations agree to reduce annual $\mathrm{CO}_{2}$ emissions by one Giga ton every year starting from 2021, then in which year will the $\mathrm{CO}_{2}$ concentration in the atmosphere stop rising due to anthropogenic emissions? <br> Take the anthropogenic $\mathrm{CO}_{2}$ emissions in 2020 as $\mathbf{4 0}$ Giga tons. |
| :---: | :---: |
| (A) | 2020 |
| (B) | 2050 |
| (C) | 2060 |
| (D) | 2100 |

| Q. 5 | The figure shows a schematic of Indian Ocean surface circulation. This <br> pattern is representative of the circulation in which month of the year? |
| :--- | :--- |
| (A) | January |
| (B) | July |
| (C) | May |
| (D) | November |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Atmospheric and Oceanic Sciences (XE-H)
Q. 6-Q. 7 Multiple Select Question (MSQ), Carry ONE mark each (no negative marks).

| Q.6 | Over the open ocean, if the air sea temperature difference is zero, then <br> which of the following statements is/are always true? |
| ---: | :--- |
| (A) | Sensible heat flux is zero. |
| (B) | Latent heat flux is zero. |
| (C) | Momentum flux is zero. |
| (D) | Net energy flux is zero. |

| Q. 7 | The psychrometric equation, which is useful in measuring humidity, is <br> derived assuming the following process(es). |
| ---: | :--- |
| (A) | Isobaric process |
| (B) | Isothermal process |
| (C) | Adiabatic process |
| (D) | Isentropic process |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

## Atmospheric and Oceanic Sciences (XE-H)

Q. 8 - Q. 9 Numerical Answer Type (NAT), carry ONE mark each (no negative marks).
Q. 8 The water vapour mixing ratio of an air parcel increases from $10 \mathrm{~g} \mathrm{~kg}^{-1}$ to 20 g $\mathbf{k g}^{-1}$ at a constant pressure of 1010 hPa and temperature of 300 K . The change in virtual temperature is $\qquad$ $K$ (to one decimal place).
Q. 9 The Ekman layer thickness, if turbulent diffusivity is $0.01 \mathbf{m}^{2} \mathbf{s}^{-1}$, is $\qquad$ m. Take Coriolis parameter to be $10^{-4} \mathrm{~s}^{\mathbf{- 1}}$. Calculate to the nearest integer.

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Atmospheric and Oceanic Sciences (XE-H)
Q. 10 - Multiple Choice Question (MCQ), carry TWO marks each (for each wrong answer: $-2 / 3$ ).

| Q. 10 | The figure shows vertical variation of two chemicals $\mathbf{P}$ and $\mathbf{Q}$ measured in <br> the Pacific Ocean. Identify the correct combination showing $(\mathbf{P}, \mathbf{Q})$ pair <br> from the list below. |
| :--- | :--- |
| (A) Oxygen, Nitrate |  |
| (B) Oxygen, Neon |  |
| (C) | Nitrate, Oxygen |
| (D) Neon, Nitrate |  |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Atmospheric and Oceanic Sciences (XE-H)
Q. 11 -Q. 15 Multiple Select Question (MSQ), Carry TWO marks each (no negative marks).

| Q.11 | Consider tropical high-level clouds and low-level stratus clouds with bases <br> at 12 km and 1 km above the surface of the Earth, respectively. Which of <br> the following statement(s) is/are correct? |
| ---: | :--- |
| (A) | High clouds are composed of ice crystals. |
| (B) | High clouds have a larger albedo than low clouds. |
| (C) | High clouds have a net warming effect on climate. |
| (D) | Low clouds have a net warming effect on climate. |

| Q. 12 | Which of the following statement(s) is/are correct in the context of <br> Sverdrup transport? |
| ---: | :--- |
| (A) | Sverdrup transport is always in the meridional direction. |
| (B) | Sverdrup transport is always orthogonal to the wind direction. |
| (C) | Sverdrup transport depends on the variation of the Coriolis parameter. |
| (D) | Sverdrup transport is only due to ageostrophic currents. |

| Q.13 | Which of the following statement(s) is/are true with regard to the Hadley <br> circulation? |
| ---: | :--- |
| (A) | The ascending branch is narrower than its descending branch. |
| (B) | Thunderstorms are more frequent in the subsiding region of the Hadley cell than <br> in its ascending region. |
| (C) | The lower level winds between the ascending and descending branches of the <br> Hadley cell are north-westerly. |
| (D) | Latent heat is transported from the subsiding to the ascending region of the <br> Hadley cell. |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Atmospheric and Oceanic Sciences (XE-H)

| Q.14 | Which of the following statement(s) is/are true about the ocean circulation? |
| ---: | :--- |
| (A) | Large-scale ocean surface currents are driven by winds. |
| (B) | Cold, dense and salty water forms in the North Atlantic Ocean. |
| (C) | Upwelling currents bring warm nutrient deficient water to the surface of the <br> ocean. |
| (D) | Thermohaline circulation does not transport energy in the meridional direction. |

| Q. 15 | Coral reefs are found primarily in tropical and subtropical shallow <br> seawaters. Which of the following statement(s) is/are correct? |
| ---: | :--- |
| (A) | Corals require plenty of sunlight for photosynthesis and sunlight is abundant in <br> the tropical and subtropical latitudes. |
| (B) | Corals grow optimally in seawater unsaturated in carbonate, which is found <br> only in the tropical and subtropical oceans. |
| (C) | Corals grow optimally in fresh low-salinity water. |
| (D) | Corals grow optimally in water temperatures between $23^{\circ} \mathrm{C}$ and $29^{\circ} \mathrm{C}$. |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Atmospheric and Oceanic Sciences (XE-H)
Q. 16 - Q. 22 Numerical Answer Type (NAT), carry TWO marks each (no negative marks).

| Q. 16 | In an incompressible fluid, the horizontal divergence is $-\mathbf{0 . 0 1} \mathrm{s}^{-1}$. Then, the <br> vertical velocity at 50 m above a flat surface is__ <br> decimal place. |
| :--- | :--- |

Q. 17 In an atmosphere, temperature (T) decreases linearly with height above the ground $(\mathbf{z})$, i.e., $T(z)=T_{0}-\gamma \mathbf{z}$, where $\gamma$ is a constant. Surface pressure is 900 hPa . If the atmosphere is at rest, then the value of z at which the pressure decreases to half of that at the surface is $\qquad$ $m$ (round off to the nearest integer).
Take acceleration due to gravity $g=10 \mathrm{~m} \mathrm{~s}^{-2}$, gas constant $R=300 \mathbf{J ~ k g}^{-1} \mathrm{~K}^{-}$ ${ }^{1}, \mathbf{T}_{\mathbf{0}}=\mathbf{3 0 0} \mathrm{K}$ and $\gamma=1 / 30 \mathrm{~K} \mathrm{~m}^{-1}$, and the atmosphere behaves as an ideal gas.
Q. 18 In a local Cartesian system, a zonal jet has a form $u(y)=u_{0}\left(1-y^{2} / L^{2}\right)$, for $-\mathrm{L} \leq \mathrm{y} \leq \mathrm{L}$. Here, y is the meridional distance measured from the axis of the jet and is positive northward. The vertical component of vorticity of this flow at $\mathrm{y}=\mathrm{L} / \mathbf{2}$ is $\qquad$ $\mathrm{s}^{-1}$. Round off to 3 decimal places.
Take $u_{0}=50 \mathrm{~m} \mathrm{~s}^{-1}$ and $L=5 \mathrm{~km}$.
Q. 19 An eastward flow with a speed of $10 \mathrm{~m} \mathrm{~s}^{-1}$ goes from station $M$ to station $\mathbf{N}$, which are separated by a distance of 1 km . The temperature at station $\mathbf{N}$ is always higher than that at station M by 10 K . The absolute change in temperature due to advection at the mid-point between the stations in 50 s is $\qquad$ $K$ (round off to nearest integer).

| Q. 20 | Suppose, because of the doubling of atmospheric $\mathrm{CO}_{2}$ concentration, an ocean water column receives an additional net energy input of $4 \mathbf{W m}^{-2}$. If the entire water column of depth $1 \mathbf{k m}$ heats up uniformly, the water temperature will increase by 1 K in $\qquad$ years (round off to the nearest integer). <br> Assume all the additional heat added is retained and not lost. Take density of seawater $=1000 \mathrm{~kg} \mathrm{~m}^{-3}$; specific heat capacity of seawater $=4200 \mathbf{J ~ k g}^{-1}$ $\mathrm{K}^{-1}$. |
| :---: | :---: |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Atmospheric and Oceanic Sciences (XE-H)
Q. 21 Consider a layer of atmosphere between 5 and 6 km height. The downwelling longwave radiation at 5 and 6 km is 240 and $230 \mathrm{Wm}^{-2}$, respectively. The upwelling longwave radiation at these heights is 260 and $240 \mathbf{~ W m}^{-2}$, respectively. The longwave heating rate in this layer is $\qquad$ K per day. (Round off to one decimal place.)
Take the average density of air in this layer to be $0.5 \mathrm{~kg} \mathrm{~m}^{-3}$; Specific heat capacity of air at constant pressure $=1000 \mathrm{~J} \mathrm{~kg}^{-1} \mathrm{~K}^{-1}$.
Q. 22 A spherical asteroid, revolving around the sun in a circular orbit, is in radiative balance. Suddenly, the asteroid enters the shadow of a planet and solar radiation is cut off. Assuming that the asteroid emits as a blackbody in the longwave regime, the time taken to reduce the average temperature of the asteroid by 0.5 K is $\qquad$ seconds (round off to the nearest integer). Ignore the temporal change in radiation emitted by the asteroid during this cooling period.

The physical properties of the asteroid are: diameter $=\mathbf{2} \mathbf{~ m}$, density $=3000 \mathrm{~kg} \mathrm{~m}^{-3}$, specific heat $=2000 \mathrm{~J} \mathrm{~kg}^{-1} \mathrm{~K}^{-1}$ and albedo $=0.8$ in shortwave radiation. Take the solar constant $=500 \mathrm{~W} \mathrm{~m}^{-2}$, Stefan-Boltzmann constant $=5.67 \times 10^{-8} \mathrm{~W} \mathrm{~m}^{-2} \mathrm{~K}^{-4}$.

## END OF THE QUESTION PAPER

## Food Technology (XE-G)

Q. 1 - Q. 9 Multiple Choice Question (MCQ), carry ONE mark each (for each wrong answer: - 1/3).

| Q.1 | In a typical bacterial growth curve, the first order kinetics for growth rate <br> is observed in |
| :--- | :--- |
| (A) | Lag phase |
| (B) | Log phase |
| (C) | Stationary phase |
| (D) | Death phase |

| Q.2 | Which one of the following microorganism is NOT a causative agent for <br> food borne diseases? |
| ---: | :--- |
| (A) | Campylobacter jejuni |
| (B) | Clostridium perfingens |
| (C) | Norovirus |
| (D) | Borrelia burgdorferi |

| Q. $\mathbf{3}$ | Which of the followings is NOT a fermented food product? |
| ---: | :--- |
| (A) | Tofu |
| (B) | Vinegar |
| (C) | Sauerkraut |
| (D) | Tempeh |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Food Technology (XE-G)

| Q.4 | The Protein Efficiency Ratio (PER) is defined as |
| ---: | :--- |
| (A) | Percentage of absorbed nitrogen retained in the body |
| (B) | Weight gain in body mass (in gram) per gram protein intake |
| (C) | Ratio of essential and non-essential amino acids in a protein |
| (D) | Percent in vitro digestibility of a protein |

| Q.5 | Which one of the following enzymes sequentially releases maltose from <br> starch? |
| ---: | :--- |
| (A) | $\alpha$-Amylase |
| (B) | $\beta$-Amylase |
| (C) | Glucoamylase |
| (D) | Pullulanase |

| Q.6 | Which one of the following enzymes is involved in proteolysis of casein in <br> cheese during aging? |
| :--- | :--- |
| (A) | Myrosinase |
| (B) | Alliinases |
| (C) | Cathepsin |
| (D) | Plasmin |

| Q. 7 | Which one of the following compounds is present in soybean and acts as <br> phytoesterogen? |
| :--- | :--- |
| (A) | Tangeretin |
| (B) | Lutin |
| (C) | Quercetin |
| (D) | Genistein |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Food Technology (XE-G)

| Q.8 | Ultra high temperature (UHT) process of pasteurization of milk is achieved <br> by Heating at |
| :--- | :--- |
| (A) | $145^{\circ} \mathrm{F}$ for 30 minutes |
| (B) | $161^{\circ} \mathrm{F}$ for 15 seconds |
| (C) | $280^{\circ} \mathrm{F}$ for 2 seconds |
| (D) | $400^{\circ} \mathrm{F}$ for 15 seconds |

| Q.9 | Bittering agent in grape fruit formed after juice extraction under acidic <br> conditions is |
| ---: | :--- |
| (A) | Quinine |
| (B) | Theobromine |
| (C) | Isohumulone |
| (D) | Limonin |

Q. 10-Q. 12 Multiple Choice Question (MCQ), carry TWO marks each (for each wrong answer: - 2/3).

| Q.10 | The conversion of pyruvate to lactic acid in homolactic fermentation is <br> catalyzed by |
| ---: | :--- |
| (A) | Lactate dehydrogenase |
| (B) | Pyruvate dehydrogenase |
| (C) | Lactase |
| (D) | Pyruvate decarboxylase |

| Q.11 | Which one of the following statements is INCORRECT with respect to <br> Controlled Atmosphere Package (CAP) and Modified Atmosphere Package <br> (MAP) of agro-produce? |
| ---: | :--- |
| (A) | CAP and MAP limit microbial as well as biochemical activities. |
| (B) | Gas composition inside a MAP during the storage is continuously monitored and <br> regulated. |
| (C) | CAP implies a greater degree of precision than MAP in maintaining specific <br> levels of the gas composition. |
| (D) | Modification of the atmosphere inside a MAP is achieved by natural interplay <br> between respiration of products and permeation of gases through the packaging <br> film. |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

| Q.12 | Match unit operation in Column I with its application in food processing in <br> Column II. |  |
| :--- | :--- | :--- |
| Column I | Column II <br> P. Hydrogenation <br> Q. Blanching <br> R. Leaching <br> S. Winterization | 1. Removal of soft wax <br> 2. Shortening of fat |
| (A) | P-2, Q-4, R-2, S-I |  |
| (B) | P-2, Q-3, Reparation of dye |  |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Food Technology (XE-G)
Q. 13 - Q. 19 Multiple Select Question (MSQ), Carry TWO marks each (no negative marks).

| Q.13 | Which of the followings are correct pair of GRAS chemical food <br> preservative, affected organism and given food matrix? |
| ---: | :--- |
| (A) | Sodium lactate-Bacteria-Pre-cooked meats |
| (B) | Caprylic acid-Insects-Cheese wraps |
| (C) | Dehydroacetic acid-Molds-Squash |
| (D) | Sodium nitrite-Clostridia-Meat curing preparations |

| Q.14 | Choose the correct pair of pigment and their corresponding color in given <br> plant product. |
| ---: | :--- |
| (A) | Carotene - Yellow-orange-Peppers |
| (B) | Betanin - Purple/red-Cactus pear |
| (C) | Lycopene - Red-Red beets |
| (D) | Flavanols - Orange-Cauliflower |

| Q.15 | Which of the following compounds act as anti-nutritional factors? |
| ---: | :--- |
| (A) | Phytate |
| (B) | Isoflavones |
| (C) | Trypsin Inhibitor |
| (D) | Resveratrol |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Food Technology (XE-G)

| Q.16 | Which of the followings is/are commonly used medium/media in the <br> supercritical fluid extraction of spices and tea? |
| ---: | :--- |
| (A) | Water |
| (B) | Carbon dioxide |
| (C) | Dichloromethane |
| (D) | Carbon dioxide with Ethanol |

| Q.17 | Which of the following expressions represent the Reynolds number of a fluid <br> flowing through a uniform circular cross section pipe? |
| ---: | :--- |
| (A) | $\frac{\text { (density of the fluid) } \times \text { (average velocity of the fluid) } \times \text { (internal diamater of the pipe) }}{\text { (dynamic viscosity of the fluid) }}$ |
| (B) | $\frac{\text { (average velocity of the fluid) } \times \text { (internal diamater of the pipe) }}{\text { (kinematic viscosity of the fluid) }}$ |
| (C) | $\frac{\text { (dynamic viscosity of the fluid) }}{\text { (average velocity of the fluid) } \times(\text { density of the fluid) } \times \text { (internal diamater of the pipe) }}$ |
| (D) | $\frac{(\text { kinematic viscosity of the fluid) }}{\text { (average velocity of the fluid) } \times \text { (internal diamater of the pipe) }}$ |

| Q.18 | Which of the following combinations of analytical equipment, property <br> measured and food property are correct? |
| ---: | :--- |
| (A) | Particle size analyzer - particle size distribution - span value |
| (B) | Texture profile analyzer - morphology - chewiness |
| (C) | Differential scanning calorimeter - glass transition temperature - degree of caking |
| (D) | Capillary viscometer - viscosity - sensory |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

| Q.19 | Choose the correct pair(s) of Governing Law and corresponding <br> application(s) |
| ---: | :--- |
| (A) | Hagen Poiseuille law - Pressure drop |
| (B) | Rittinger's law - Vapour pressure |
| (C) | Stefan Boltzmann law - Radiation heat transfer |
| (D) | Raoult's law - Size reduction |

Q. 20 - Q. 22 Numerical Answer Type (NAT), carry TWO marks each (no negative marks).

| Q.20 | An orange juice sample is concentrated from $10 \%$ to $40 \%$ (by weight) total <br> soluble solids in a single effect evaporator with a feed rate of $3600 \mathrm{~kg} \mathrm{hr}-1$ <br> at $25^{\circ} \mathrm{C}$. The evaporator operates at sufficient vacuum to allow the product <br> moisture to evaporate at $55^{\circ} \mathrm{C}$. The specific heat of both feed and <br> concentrated juice is $4.0 \mathrm{~kJ} \mathrm{~kg}-1{ }^{\circ} \mathrm{C}-1$. If enthalpy of water vapour at $55^{\circ} \mathrm{C}$ <br> is $2600 \mathrm{~kJ} \mathrm{~kg}-1$, heat transfer rate through the heating surface area of the <br> evaporator in kilowatt (in integer) will be- |
| :--- | :--- |

| Q.21 | Dry air is fed into a tray dryer. The percentage relative humidity of the air <br> leaving the dryer is $60 \%$ at $70^{\circ} \mathrm{C}$ and 101.35 kPa . If, saturated vapour <br> pressure of water at $70^{\circ} \mathrm{C}$ is 31.2 kPa , the humidity of the air leaving the <br> dryer in kg water per kg dry air (round off to 3 decimal places) will be |
| :--- | :--- |
| (Given : Molecular weight of water and air are 18.02 g mol-1 and 28.97 g <br> mol-1 respectively) |  |

Q. 22 In a cold storage plant, 5000 kg potato having a constant specific heat capacity of $3.65 \mathrm{~kJ} \mathrm{~kg}-1{ }^{\circ} \mathrm{C}-1$ are cooled from $28^{\circ} \mathrm{C}$ to $2^{\circ} \mathrm{C}$ in 24 hours. The heat of respiration of potato per 24 hour is $3.12 \mathrm{~kJ} \mathrm{~kg}-1$ during the storage. Assuming the efficiency of the storage plant to be $\mathbf{7 0 \%}$, the capacity of the plant in ton of refrigeration (round off to 2 decimal places) is $\qquad$ .
(Given: 1 ton of refrigeration $=3.517$ kilowatt)

## END OF THE QUESTION PAPER

## Polymer Science and Engineering (XE-F)

Q. 1 - Q. 9 Multiple Choice Question (MCQ), carry ONE mark each (for each wrong answer: - 1/3).

| Q.1 | Linear low density polyethylene (LLDPE) is a copolymer of ethylene and a <br> small fraction of <br> (A) |
| ---: | :--- |
| butadiene |  |
| (B) | isoprene |
| (C) | butene |
| (D) | hexadiene |

| Q.2 | Binary polymer blends of polypropylene and polyamide 6 are immiscible. <br> From a thermodynamic viewpoint this is due to <br> (A) |
| :--- | :--- |
| (B) | high entropy of mixing |
| (C) | high enthalpy of mixing |
| (D) | low entropy of mixing |

| Q.3 | Which one of the following is an elastomer? |
| ---: | :--- |
| (A) | Polyamide 6,6 |
| (B) | Poly(ethylene terepthalate) |
| (C) | Vulcanized polybutadiene |
| (D) | High density polyethylene |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Polymer Science and Engineering (XE-F)

| Q. 4 | Compression moulded isotropic polypropylene film exhibits <br> in X-ray diffraction analysis. |
| ---: | :--- |
| (A) | spot pattern |
| (B) | circular ring pattern |
| (C) | circular ring and spot pattern |
| (D) | arc pattern |

| Q. 5 | Which one of the following is an example of a biodegradable polymer? |
| ---: | :--- |
| (A) | Polyethylene |
| (B) | Polyamide 6,6 |
| (C) | Polypropylene |
| (D) | Polylactic acid |

| Q.6 | Polymer crystals show a range of melting points in contrast to single <br> melting point of crystals of small molecules, because <br> (A) |
| ---: | :--- |
| there is an absence of intermolecular interactions |  |
| (B) | there is an absence of long range ordering |
| (C) | the polymer chains are not in thermodynamic equilibrium in a metastable state |
| (D) | the melting behavior of polymer crystal is independent of sample thermal <br> history |

| Q. 7 | When the rate of cooling is increased during the solidification process, the <br> glass transition temperature of a polymer <br> (A) |
| :--- | :--- |
| decreases |  |
| (B) | increases |
| (C) | stays unaltered |
| (D) | shows a non-monotonic dependence |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Polymer Science and Engineering (XE-F)

| Q.8 | Equal and opposite forces of a constant magnitude $\boldsymbol{F}$ are applied at the two <br> ends of a thin elastomeric rod, which is held at a temperature $\boldsymbol{T}_{1}\left(\boldsymbol{T}_{\mathrm{g}}<\boldsymbol{T}_{\mathbf{1}}<\right.$ <br> $\left.\boldsymbol{T}_{\mathrm{m}}\right)$, where $\boldsymbol{T}_{\mathrm{g}}$ and $\boldsymbol{T}_{\mathrm{m}}$ are the glass transition temperature and melting <br> temperature respectively. If the temperature is increased to $\boldsymbol{T}_{\mathbf{2}}\left(\boldsymbol{T}_{\mathrm{g}}<\boldsymbol{T}_{\mathbf{2}}<\right.$ <br> $\boldsymbol{T}_{\mathrm{m}}$ and $\left.\boldsymbol{T}_{\mathbf{2}}>\boldsymbol{T}_{\mathbf{1}}\right)$, the rod will <br> (A) |
| :--- | :--- |
| expand along the loading direction and the transverse direction |  |
| (B) | shrink along the loading direction |
| (C) | remain dimensionally unaltered |
| (D) | expand only along the loading direction |

| Q. 9 | The size of a coiled polymer chain in a dilute solution is $\boldsymbol{R}_{G}$ in a good <br> solvent, $\boldsymbol{R}_{I}$ in an ideal solvent and $\boldsymbol{R}_{P}$ in a poor solvent. Select the correct <br> ordering of sizes. |
| ---: | :--- |
| (A) | $R_{G}>R_{I}>R_{P}$ |
| (B) | $R_{G}<R_{I}<R_{P}$ |
| (C) | $R_{P}>R_{G}>R_{I}$ |
| (D) | $R_{P}<R_{G}<R_{I}$ |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Polymer Science and Engineering (XE-F)
Q. 10 - Q. 12 Multiple Choice Question (MCQ), carry TWO marks each (for each wrong answer: - 2/3).

| Q. 10 | Match the Additive to its Function. |  |
| :---: | :---: | :---: |
|  | Additive | Function |
|  | P. Tritolyl phosphate | 1. Coupling Agent |
|  | Q. Triethoxy vinyl silane | 2. Antioxidant |
|  | R. Azoisobutyronitrile | 3. Plasticizer |
|  | S. 4-Methyl-2,6-di-t-butyl phenol | 4. Blowing Agent |
| (A) | P-3, Q-2, R-1, S-4 |  |
| (B) | P-3, Q-1, R-4, S-2 |  |
| (C) | P-4, Q-1, R-3, S-2 |  |
| (D) | P-1, Q-2, R-4, S-3 |  |

| Q. 11 | Match the polymer processing operation with respect to its typical range of shear rate. |  |
| :---: | :---: | :---: |
|  | Processing Operation | Shear rate ( $\mathrm{s}^{\mathbf{- 1}}$ ) |
|  | P. Compression Moulding | 1. 1000-10000 |
|  | Q. Extrusion | 2. 100-1000 |
|  | R. Calendering | 3. 1-10 |
|  | S. Injection Moulding | 4. 10-100 |
| (A) | P-3, Q-4, R-2, S-1 |  |
| (B) | P-1, Q-3, R-2, S-4 |  |
| (C) | P-2, Q-4, R-3, S-1 |  |
| (D) | P-3, Q-2, R-1, S-4 |  |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

## Polymer Science and Engineering (XE-F)

| Q. 12 | Shear stress ( $\boldsymbol{\sigma}$ ) and shear viscosity $(\boldsymbol{\eta})$ are plotted as functions of the shear <br> rate, $\dot{\boldsymbol{\gamma}, \text { for idealized "solid-like with yielding (1)" and "liquid-like (2)" }}$ <br> materials. |
| :--- | :--- |
| (A) | P-2, Q-1, R-2, S-1 <br> responses. |
| (B) | P-1, Q-2, R-1, S-2 |
| (C) | P-1, Q-2, R-2, S-1 |
| (D) | P-2, Q-1, R-1, S-2 |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Polymer Science and Engineering (XE-F)
Q. 13 - Q. 22 Numerical Answer Type (NAT), carry TWO marks each (no negative marks).
Q. 13 The plateau modulus of polystyrene has a value of $0.2 \times 10^{6} \mathrm{~Pa}$ at $150{ }^{\circ} \mathrm{C}$. Given, the density of polystyrene is $1.05 \mathrm{~g} / \mathrm{cm}^{3}$, the universal gas constant, $R=8.3 \mathrm{~J} \mathrm{~K}^{-1} \mathrm{~mol}^{-1}$, and the monomer molecular weight is $104 \mathrm{~g} / \mathrm{mol}$. The molecular weight between entanglements (rounded off to the nearest integer) of polystyrene chains is $\qquad$ $\mathrm{g} / \mathrm{mol}$.
Q. 14 A unidirectional composite of epoxy and carbon fiber of $50 \%$ by volume is made. The elastic modulus of epoxy and carbon fiber are 3.5 GPa and 350 GPa, respectively. The ratio (rounded off to one decimal place) of the modulus of the composite to the matrix modulus is $\qquad$ .

| Q. 15 | A single screw extruder is operating at a rotational speed of 2 revolutions <br> per second for the extrusion of a Newtonian polymer under open-discharge <br> conditions (in absence of a die, the pressure drop, $\Delta p=0$ ). The extruder has <br> a screw diameter, $D=5 \mathrm{~cm}$, a channel depth, $H=0.4 \mathrm{~cm}$, distance between <br> flights, $W=1 \mathrm{~cm}$, and a helix angle, $\theta=20^{\circ}$. Assume the value of $\pi=$ <br> 3.14. The volumetric flow rate (rounded off to 2 decimal places) is <br> $\mathrm{cm}^{3} / \mathrm{s}$. |
| :--- | :--- |

Q. 16

At $215{ }^{\circ} \mathrm{C}$, the viscosity of a polystyrene of molecular weight $250 \times 10^{3}$ $\mathrm{g} / \mathrm{mol}$ is $8.0 \times 10^{\mathbf{3}} \mathrm{Pa}$.s. The critical molecular weight of polystyrene, $M_{\mathrm{c}}=$ $35 \times 10^{\mathbf{3}} \mathrm{g} / \mathrm{mol}$. For a similar polystyrene of molecular weight $500 \times 10^{\mathbf{3}}$ $\mathrm{g} / \mathrm{mol}$, the viscosity (rounded off to nearest integer) will be $\qquad$ $\times 10^{3}$ Pa.s.
Q. 17

There are two different PTFE polymer specimens of the following density ( $\rho$ ) and \% crystallinity. For PTFE-specimen- $1, \rho$ is $2.144 \mathrm{~g} / \mathrm{cm}^{3}$ and $\%$ crystallinity is 50 . For PTFE- specimen-2, $\rho$ is $2.215 \mathrm{~g} / \mathrm{cm}^{3}$ and \% crystallinity is 75 . Assuming the polymer is pure and defect free, the density (rounded off to 3 decimal places) of $\mathbf{1 0 0 \%}$ amorphous PTFE specimen will be $\qquad$ $\mathrm{g} / \mathrm{cm}^{3}$.

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Polymer Science and Engineering (XE-F)

| Q. 18 | The behavior of a polymer is described by a Maxwell model consisting of a <br> spring element of modulus $10^{10} \mathrm{~Pa}$ in series with a dashpot of viscosity $10^{12}$ <br> Pa.s. In the solid, 50 s after the sudden application of a fixed strain of $\mathbf{1 \%}$, <br> the stress (rounded off to 2 decimal places) will be__ $\times 10^{7} \mathrm{~Pa}$. |
| :--- | :--- |

| Q. 19 | A particular free radical polymerization process yields a polymer with a <br> number averaged degree of polymerization, $\bar{x}_{\boldsymbol{n}}=100$. The monomer <br> concentration is doubled and the initiator concentration is increased by <br> four times. Assuming that all rate coefficients and other parameters remain <br> unchanged, the value of $\bar{x}_{n}$ (rounded off to the nearest integer) is |
| :--- | :--- |

| Q. 20 | A polymer is synthesized from 2 moles of terephthalic acid (molecular <br> weight of the repeat unit, $\left(-\mathrm{OCC}_{6} \mathrm{H}_{4} \mathrm{CO}-\right)$, is $\left.132 \mathrm{~g} / \mathrm{mol}\right), 1 \mathrm{~mol}$ of ethylene <br> glycol (molecular weight of the repeat unit, $\left(-0 \mathrm{CH}_{2} \mathrm{CH}_{2} \mathrm{O}-\right)$, is $\left.60 \mathrm{~g} / \mathrm{mol}\right)$, and |
| :--- | :--- |
| 1 mol of butylene glycol (molecular weight of the repeat unit, $\left.\left(-0\left(\mathrm{CH}_{2}\right)\right)_{4} 0-\right)$, |  |
| is $88 \mathrm{~g} / \mathrm{mol})$. The reaction is terminated at $99 \%$ conversion of the acid. The |  |
| number averaged molecular weight, $\bar{M}_{\boldsymbol{n}}($ rounded off to the nearest integer) |  |
| is $\quad \mathrm{g} / \mathrm{mol}$. |  |

| Q. 21 | A sample of natural rubber (cis-1,4-polyisoprene) is vulcanized such that <br> one of every 240 chain carbon atoms is cross-linked. The formula unit of <br> the isoprene monomer is $\mathrm{C}_{5} \mathrm{H}_{8}($ molecular weight $=\mathbf{6 8} \mathrm{g} / \mathrm{mol})$. The average <br> molecular weight (rounded off to the nearest integer) between cross-links is <br> $\mathrm{g} / \mathrm{mol}$. |
| :--- | :--- |

| Q. 22 | A sample of an oriented semi-crystalline polymer is subjected to uniaxial <br> tensile stress, $\sigma$, in an X-ray diffractometer. The wavelength of X-ray <br> radiation $\left(\mathrm{Cu} K_{\alpha}\right)$ is $\lambda=1.542$ A. The position of the (002) peak, which was <br> found initially at a Bragg angle of $37.50^{\circ}$ at $\sigma=0$ MPa shifted to $37.45^{\circ}$ at $\sigma$ <br> $=160 \mathrm{MPa}$. Assuming elastic deformation, the strain (rounded off to three <br> decimal places) in the sample along the direction of applied stress is <br> $\times 10^{-3}$. |

Thermodynamics (XE-E)
Q. 10 - Q. 13 Multiple Choice Question (MCQ), carry TWO marks each (for each wrong answer: -2/3).

| Q. 10 | The saturation pressure $\boldsymbol{P}_{\text {sat }}$ of a pure liquid is represented by an equation of the <br> form: <br> ln $\boldsymbol{P}_{\text {sat }}=\mathbf{A}-(\mathbf{B} / \boldsymbol{T})$, <br> where, $\mathbf{A}$ and $\mathbf{B}$ are constants, and $\boldsymbol{T}$ is the absolute temperature. For this <br> substance, which of the following expression for specific entropy difference <br> between the saturated vapour and the saturated liquid phase $\left(\boldsymbol{s}_{\boldsymbol{f} \boldsymbol{g}}\right)$ is correct? <br> Note: Subscripts $\boldsymbol{f}$ and $\boldsymbol{g}$ refer to saturated liquid and saturated vapour phases, <br> respectively, and $\boldsymbol{v}_{f g}$ is the specific volume difference between the saturated <br> vapour and the saturated liquid phases. |
| ---: | :--- |
| (A) | $s_{f g}=v_{f g} \frac{B P_{s a t}^{2}}{T^{2}}$ |
| (B) | $s_{f g}=v_{f g} \frac{B P_{s a t}}{T^{2}}$ |
| (C) | $s_{f g}=v_{f g} \frac{B P_{s a t}}{T^{3}}$ |
| (D) | $s_{f g}=v_{f g} \frac{B P_{s a t}^{3}}{T^{2}}$ |

Q. 11 For a refrigeration cycle, the ratio of actual COP to the COP of a reversible refrigerator operating between the same temperature limits is 0.8 . The condenser and evaporator temperatures are $51^{\circ} \mathrm{C}$ and $-30^{\circ} \mathrm{C}$, respectively. If the cooling capacity of the plant is 2.4 kW , then the power input to the refrigerator is:
(COP: Coefficient of Performance)
(A) 1.00 kW
(B) 1.33 kW
(C) 1.25 kW
(D) 2.08 kW
Q. 12 Two identical pressure cookers, Cooker A and Cooker B, each having a total internal capacity of 6 litres are available. Cooker $A$ is filled with 2 litres of liquid water at $110^{\circ} \mathrm{C}$ and Cooker $B$ is filled with 4 litres of liquid water at $110^{\circ} \mathrm{C}$. The remaining space in both the cookers is filled with saturated water vapour in equilibrium with the liquid water. If $\boldsymbol{g}$ represents the specific Gibbs free energy, and subscripts $v$ and $l$ represent the saturated vapour and the saturated liquid phases, respectively, which of the following expressions is correct?

Cooker A

Cooker B
(A) $g_{v, A}>g_{l, B}$
(B) $g_{v, A}<g_{l, B}$
(C) $g_{v, A}=g_{l, B}$
(D) $g_{l, B}=2 g_{l, A}$

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Thermodynamics (XE-E)
Q. 13 Four different Entropy (S) - Temperature (T) diagrams, representing liquid to vapour phase transition process of a pure substance in a closed system under constant pressure are shown. The diagram, which correctly represents the process, is:

(1)

(2)

(3)
(A) 1
(B) 2
(C) 3
(D) 4

Thermodynamics (XE-E)
Q. 14 - Q. 22 Numerical Answer Type (NAT), carry TWO marks each (no negative marks).
Q. 14 Air having a mass flow rate of $2 \mathrm{~kg} / \mathrm{s}$ enters a diffuser at 100 kPa and $30^{\circ} \mathrm{C}$, with a velocity of $200 \mathrm{~m} / \mathrm{s}$. Exit area of the diffuser is $400 \mathrm{~cm}^{2}$ while the exit temperature of the air is $45^{\circ} \mathrm{C}$. The rate of heat loss from the diffuser to the surrounding is 8 $\mathrm{kJ} / \mathrm{s}$. The pressure at the diffuser exit is $\qquad$ kPa (2 decimal places).

For air, the characteristic gas constant is $287 \mathrm{~J} /(\mathrm{kgK})$ and specific heat capacity at constant pressure is $1005 \mathrm{~J} /(\mathrm{kgK})$. Assume air to be an ideal gas and the flow in the diffuser is steady.
Q. 15 For the Refrigerant $R-134$ (at 1 MPa and $50^{\circ} \mathrm{C}$ ), the difference between the specific volume computed by assuming it to be an ideal gas and its actual specific volume is: $v_{\text {ideal }}-v_{\text {actual }}=4.529 \times 10^{-3} \mathrm{~m}^{3} / \mathrm{kg}$. If the compressibility factor associated with this state is $Z=0.84$, then $v_{\text {com }}-v_{\text {actual }}=$ $\ldots \times 10^{-3} \mathrm{~m}^{3} / \mathrm{kg}$ ( 3 decimal places).
Here $\boldsymbol{v}_{\text {com }}$ is the specific volume calculated using the compressibility factor.
For Refrigerant $R$-134 (at 1 MPa and $50^{\circ} \mathrm{C}$ ):
The characteristic gas constant: $0.0815 \mathrm{~kJ} /(\mathrm{kgK})$, The critical pressure and temperature are, respectively, $P_{c r}=4.059 \mathrm{MPa}$ and $T_{c r}=374.2 \mathrm{~K}$.
Q. 16 A mixture of air and water vapour enters a steady-flow adiabatic saturator at $50^{\circ} \mathrm{C}$ and 100 kPa . It leaves the saturator in a completely saturated state at temperature of $25^{\circ} \mathrm{C}$ and pressure of 100 kPa . Liquid water enters the saturator at $25^{\circ} \mathrm{C}$. If air is considered to be an ideal gas, with constant specific heat capacity, the relative humidity of the air entering the saturator is $\qquad$ \% (1 decimal place).

Use the following data:
at $25^{\circ} \mathrm{C} \boldsymbol{h}_{f}=104.87 \mathrm{~kJ} / \mathrm{kg}, \boldsymbol{h}_{g}=2547.17 \mathrm{~kJ} / \mathrm{kg}, P_{\text {sat }}=3.161 \mathrm{kPa}$
at $50^{\circ} \mathrm{C} \boldsymbol{h}_{f}=209.31 \mathrm{~kJ} / \mathrm{kg}, \boldsymbol{h}_{g}=2592.06 \mathrm{~kJ} / \mathrm{kg}, P_{\text {sat }}=12.335 \mathrm{kPa}$
Specific heat capacity of air at constant pressure $C_{P}=1.005 \mathrm{~kJ} /(\mathrm{kgK})$
Q. 17 Air at a pressure of 1 MPa and 300 K is flowing in a pipe. An insulated evacuated rigid tank is connected to this pipe through an insulated valve. The volume of the tank is $1 \mathrm{~m}^{\mathbf{3}}$. The valve is opened and the tank is filled with air until the pressure in the tank is 1 MPa . Subsequently, the valve is closed. Consider air to be an ideal gas and neglect bulk kinetic and potential energy. The final temperature of air in the tank is $\qquad$ $K$ (1 decimal place).
Specific heat capacity of air at constant pressure $C_{P}=1.005 \mathrm{~kJ} /(\mathrm{kgK})$ and characteristic gas constant for air $=0.287 \mathrm{~kJ} /(\mathrm{kgK})$
Q. 18 A cylinder of volume $0.1 \mathrm{~m}^{3}$ is filled with 100 mol of propane $\left(\mathrm{C}_{3} \mathrm{H}_{8}\right)$ at 2 MPa . If propane is assumed to obey the van der Waals equation of state, then its temperature is $\qquad$ K (1 decimal place).
The van der Waals constants for propane are: $a=939.2 \mathrm{kPa}\left(\mathrm{m}^{3} / \mathrm{kmol}\right)^{2}$ and $b=0.0905 \mathrm{~m}^{3} / \mathrm{kmol}$. The universal gas constant is $8.3145 \mathrm{~J} /(\mathrm{mol} \mathrm{K})$.
Q. 19 A frictionless piston cylinder device contains 1 kg of an ideal gas. The gas is compressed according to $P \boldsymbol{v}^{1.3}=$ constant ( $P$ is pressure and $v$ is mass specific volume), from $100 \mathrm{kPa}, 250 \mathrm{~K}$, till it reaches a temperature of 500 K . The heat transfer from the piston cylinder device to its surroundings is $\qquad$ kJ (2 decimal places).

The characteristic gas constant is $287 \mathrm{~J} /(\mathrm{kgK})$ and the ratio of specific heat capacities is 1.4.
Q. 20 A $0.8 \mathbf{m}^{3}$ insulated rigid tank contains 1.5 kg of an ideal gas at 100 kPa . Electric work is done on the system until the pressure in the tank rises to 135 kPa . The loss in availability (exergy) associated with the process is $\qquad$ kJ (2 decimal places).
For the ideal gas, the characteristic gas constant is $188.9 \mathrm{~J} /(\mathrm{kgK})$ and the specific heat capacity at constant volume is $680 \mathrm{~J} /(\mathrm{kgK})$. The temperature of the dead state is 298 K .
Q. 21 A rigid tank contains 1.0 kg of pure water consisting of liquid and vapour phases in equilibrium at 10 bar. If the liquid and vapour phase each occupies one half of the volume of the tank, then the net enthalpy of the contents of the tank is $\qquad$ kJ (1 decimal place).

For saturated liquid and vapour at 10 bar, the thermodynamic data table provides the following values:
$v_{f}=1.127 \times 10^{-3} \mathrm{~m}^{3} / \mathrm{kg}, v_{g}=194.3 \times 10^{-3} \mathrm{~m}^{3} / \mathrm{kg}$,
$h_{f}=762.6 \mathrm{~kJ} / \mathrm{kg}, \boldsymbol{h}_{g}=2776.2 \mathrm{~kJ} / \mathrm{kg}$
Q. 22 An air-standard Diesel cycle with a compression ratio of 16 takes air at 1 bar and 300 K . If the maximum temperature in the cycle is 2100 K , then the thermal efficiency of the cycle is $\qquad$ \% ( 1 decimal place). The ratio of the specific heat capacities of air is 1.4.

## END OF THE QUESTION PAPER

## Solid Mechanics (XE-D)

Q. 1 - Q. 8 Multiple Choice Question (MCQ), carry ONE mark each (for each wrong answer: - 1/3).

| Q.1 | A force $\mathbf{F}=\mathbf{4 0} \mathbf{k N}$ is applied on the hook as shown. The equivalent force- <br> couple system at $\mathbf{B}$ is |
| :--- | :--- |
| (A) | 40 kN in +y direction and $\mathrm{M}=0$ |
| (B) | 40 kN in -y direction and $\mathrm{M}=0$ |
| (C) | 40 kN in +y direction and $\mathrm{M}=4000 \mathrm{Nm}$ counter clockwise |
| (D) | 40 kN in -y direction and $\mathrm{M}=4000 \mathrm{Nm}$ clockwise |

| Q. 2 | A rigid rod OA rotates clockwise at an angular velocity of $10 \mathrm{rad} / \mathrm{s}$. A bead $B(O B=1 \mathrm{~m})$ translates outward on the rod at a speed of $5 \mathrm{~m} / \mathrm{s}$ and acceleration $2.5 \mathrm{~m} / \mathrm{s} 2$ (both quantities with respect to the rod). The Coriolis component of acceleration is |
| :---: | :---: |
| (A) | $2.5 \mathrm{~m} / \mathrm{s} 2 \mathrm{in}+\mathrm{x}$ direction |
| (B) | $100 \mathrm{~m} / \mathrm{s} 2 \mathrm{in}+\mathrm{x}$ direction |
| (C) | $100 \mathrm{~m} / \mathrm{s} 2 \mathrm{in}-\mathrm{y}$ direction |
| (D) | $25 \mathrm{~m} / \mathrm{s} 2 \mathrm{in}+\mathrm{y}$ direction |

| Q. 3 | A two force member in equilibrium is one in which |
| ---: | :--- |
| (A) | Forces act at two points and forces are collinear |
| (B) | Forces act at two points and member is always straight |
| (C) | Forces act at two points but the member is free to carry moment at any point |
| (D) | Force acts at one point and moment acts at second point |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Solid Mechanics (XE-D)

| Q.4 | If the yield point shear stress obtained from the torsion test of a cylindrical <br> specimen is $\tau \mathbf{y}$, then what is the maximum value of principal strain at <br> yielding? ( $\boldsymbol{\mu}$ is Poisson's ratio and E is Young's modulus) |
| :--- | :--- |
| (A) | $\frac{\tau_{y}}{E}$ |
| (B) | $\frac{(1+\mu) \tau_{y}}{E}$ |
| (C) | $\frac{\tau_{y}}{2 E}$ |
| (D) | $\frac{(1-\mu) \tau_{y}}{E}$ |

| Q.5 | If the ratio of Young's modulus to bulk modulus of a material is 3/2, then <br> the ratio of shear modulus to the Young's modulus of the material is |
| :--- | :--- |
| (A) | 1 |
| (B) | $2 / 5$ |
| (C) | $1 / 3$ |
| (D) | $3 / 5$ |

| Q.6 | With respect to the plane of maximum shear stress, which of the following <br> statements is INCORRECT? |
| :--- | :--- |
| (A) | The normal stress on this plane is zero. |
| (B) | The maximum shear stress is equal to the largest of the one half the difference of <br> principal stresses |
| (C) | The plane of maximum shear stress occurs at $45^{\circ}$ to the principal planes. |
| (D) | The magnitude of the maximum shear stress is equal to the largest of the radius <br> of the Mohr's circles. |

Q. 10-Q. 15 Multiple Choice Question (MCQ), carry TWO marks each (for each wrong answer: - 2/3).

| Q. 10 | For the state of plane stress shown, the components of normal and shear <br> stresses are given in terms of stress $\boldsymbol{\sigma}$ and unknown constants m and n . If <br> the normal and shear components of stress on a 450 plane are $2 \boldsymbol{\sigma}$ and zero, <br> the values of m and n would be: |
| :--- | :--- |
| (A) | $m=1, n=2$ |
| (B) | $m=2, n=1$ |
| (C) | $m=1, n=1$ |
| (D) | $m=2, n=2$ |

| Q.11 | For a state of plane strain, the normal strains are given by <br> $\boldsymbol{\varepsilon x x}=\mathbf{1 0 0 0} \times \mathbf{1 0 - 6 , \mathbf { \varepsilon y y } = \mathbf { 2 0 0 } \times \mathbf { 1 0 - 6 } \text { and the maximum shear strain is }}$ <br> $\boldsymbol{\gamma \mathbf { m a x } = \mathbf { 1 0 0 0 } \times \mathbf { 1 0 - 6 } \text { . The value of shear strain } \gamma \mathbf { x y } \text { for this strain state is }}$ |
| :--- | :--- |
| (A) | $600 \times 10^{-6}$ |
| (B) | $183 \times 10^{-6}$ |
| (C) | $1000 \times 10^{-6}$ |
| (D) | $800 \times 10^{-6}$ |

| Q.12 | A thin cylinder (closed at its ends) of radius $\mathbf{r}$ and thickness $\mathbf{t}(\mathbf{r}>\mathbf{t}$ ) is <br> subjected to internal pressure $\mathbf{p}$. The maximum shear stress in the wall of <br> the cylinder is |
| :--- | :--- |
| (A) | $\frac{p r}{t}$ |
| (B) | $\frac{p r}{2 t}$ |
| (C) | $\frac{p r}{4 t}$ |
| (D) | $\frac{3 p r}{2 t}$ |

| Q.13 | The truss shown is subjected to a force P. All members of the truss have the <br> same length L . The reaction at $\mathbf{A}$ and force in member AB are |
| :--- | :--- |
| (A) | $\frac{P \sqrt{3}}{4}$ and $\frac{P}{2}$ |
| (B) | $\frac{P \sqrt{3}}{8}$ and $\frac{P \sqrt{3}}{4}$ |
| (C) | $\frac{P \sqrt{3}}{4}$ and $\frac{P}{4}$ |
| (D) | $P$ and $\frac{P}{4}$ |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Solid Mechanics (XE-D)
Q.14

| Q. 15 | A hammer of mass 1 kg is used to break an almond shell. The velocity time graph of the hammer during the impact duration is shown in the figure. The shape of force time graph is also given, which can be approximated as a triangle. A force of $\mathbf{3 0 0} \mathbf{N}$ is required for breaking the shell, while a force of $\mathbf{2 0 0} \mathbf{N}$ will not be able to break it, but just introduce a crack. Which one of the following events will happen? |
| :---: | :---: |
| (A) | The almond shell will crack but not break |
| (B) | The almond shell will not crack. |
| (C) | The almond shell will break |
| (D) | Cannot be determined from the given data |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Solid Mechanics (XE-D)
Q. 16 - Q. 22 Numerical Answer Type (NAT), carry TWO marks each (no negative marks).

| Q.16 | A rigid circular disc of radius 0.2 m and mass 10 kg rolls without slip on <br> the ground at A. The coefficient of static friction $\mu$ between ground and <br> disc is 0.7 . A torque T of 9 Nm acts on the disc as shown. Given <br> acceleration due to gravity $\mathrm{g}=10 \mathrm{~m} / \mathrm{s}^{2}$. The friction force (in N ) acting on <br> the disc (in integer) is |
| :--- | :--- |

Q. 17 A prismatic solid circular rod of diameter $d$ is bent to introduce an offset $\mathbf{s}=\mathrm{d}$ as shown. The rod is further subjected to an axial load $P$. If the maximum longitudinal stress at a section A-B in the rod (with offset) is $\mathbf{n}$ times the longitudinal stress in the straight rod, the value of $\mathbf{n}$ (in integer) would be $\qquad$

| Q. 18 | A naturally curved steel beam AB having Young's modulus 208 GPa , area <br> moment of inertia $\mathrm{I}=26.7 \mathrm{~cm}^{4}$ and radius $\mathrm{R}=2 \mathrm{~m}$ is subjected to a vertical <br> load $\mathrm{P}=1000 \mathrm{~N}$ at B . The end A at $\theta=900$ is rigidly fixed. The bending <br> strain energy of the beam <br> (in Nm , rounded off to two decimal places) is |
| :--- | :--- |

| Q. 19 | At room temperature of $25^{\circ} \mathrm{C}$, a gap of 1 mm exists between the ends of the <br> rods 1 and 2 as shown. Given the cross section area $A$ of the rods is <br> $1500 \mathrm{~mm}^{2}$, Young's modulus $\mathrm{E}=75 \mathrm{GPa}$ and the coefficient of thermal <br> expansion $\alpha=23 \times 10^{-6} /{ }^{\circ} \mathrm{C}$. When the temperature has reached $150^{\circ} \mathrm{C}$, the <br> magnitude of normal stress in each of the rods (in MPa , rounded off to two <br> decimal places) is |
| :--- | :--- |

| Q. 20 | A tube of inner radius 4 cm and outer radius 5 cm can carry a maximum <br> torque of $T$. This tube is now replaced by a solid circular shaft of the same <br> material. The minimum radius of the solid circular shaft (in cm, rounded <br> off to two decimal places) to carry the same amount of torque $T$ is |
| :--- | :--- |

| Q. 21 | In System A, a rectangular block of mass M is centrally supported on a <br> spring of stiffness K as shown. In the System B , the mass is hinged at one of <br> its ends and is supported centrally by the spring. The ratio of natural <br> frequency of System B to that of System A (rounded off to two decimal <br> places) is _ |
| :--- | :--- |

| Q.22 | A coronavirus droplet of mass 1 microgram ejects from the mouth of a <br> patient with a velocity of $0.7 \mathrm{~m} / \mathrm{s}$ and travels through air. The gravitational <br> force experienced by it can be neglected due to the buoyancy effect. <br> However, the droplet experiences air drag force proportional to its velocity <br> and the drag coefficient is given as $1.0 \mu \mathrm{~N}-\mathrm{s} / \mathrm{m}$. The distance travelled by <br> the droplet before its velocity drops to $10 \%$ of its initial velocity (in m, <br> rounded off to two decimal places) is |
| :--- | :--- |

Q. 13 Multiple Select Question (MSQ), Carry TWO marks each (no negative marks).

| Q.13 | X-ray diffraction peak broadening enables the estimation of |
| ---: | :--- |
| (A) | crystallite size of the material |
| (B) | microstrain in the material |
| (C) | precise lattice parameter |
| (D) | residual macrostress acting on the material |

Q. 14 - Q. 22 Numerical Answer Type (NAT), carry TWO marks each (no negative marks).

| Q. 14 | $\mathrm{Fe}-10$ atom \% C austenite (fcc), having no Fe vacancies, has a lattice parameter of $4 \AA$. The density of austenite in $\mathrm{g} \mathrm{cm}^{-3}$ is $\qquad$ (round off to 2 decimal places) <br> (Given: atomic weight of $\mathrm{Fe}=55.8$; atomic weight of $\mathrm{C}=12.0$; <br> Avogadro's number $=6.023 \times 10^{23}$ ) |
| :---: | :---: |

| Q.15 | An element transforms from $\alpha$ to $\beta$ at 773 K and 1 atm pressure with 912 J <br> mol ${ }^{-1}$ as enthalpy of transformation. The molar volumes of $\alpha$ and $\beta$ phases <br> are $7.377 \mathrm{~cm}^{3}$ and $7.317 \mathrm{~cm}^{3}$, respectively. Assume that the difference in <br> molar volumes of $\alpha$ and $\beta$ is independent of pressure. The pressure (in atm) <br> required for $\alpha$ to $\beta$ transformation to occur at 723 K is <br> off to nearest integer) <br> (Given: $\left.1 \mathrm{~atm}=1.01325 \times 10^{5} \mathrm{~Pa}\right)$ |
| :--- | :--- |
| (round |  |

Q. 16 A binary A-B alloy has $\alpha$ and $\beta$ phases at equilibrium. The ratio of weight percentages (wt.\%) of $\alpha$ to $\beta$ is 4 . The wt. $\%$ of $A$ in $\alpha$ and $\beta$ phases is 70 and 20 , respectively. The $w t . \%$ of $B$ in the alloy is $\qquad$ (round off to nearest integer)

| Q.17 | During heating, Ti undergoes allotropic transformation from hcp to bcc at <br> 882 ${ }^{\circ} \mathrm{C}$. The percent volume change accompanying this transformation is <br> (round off to 1 decimal place $)$ |
| :--- | :--- |
| (Given: atomic weight of $T i=47.9 ;$ lattice parameter of bcc $T i=0.332 \mathrm{~nm} ;$ <br> density of $h c p T i=4.51 \mathrm{~g} \mathrm{~cm}^{-3} ;$ Avogadro's number $\left.=6.023 \times 10^{23}\right)$ |  |

Q. 18 Vickers hardness test is performed with an indenter of square-base diamond pyramid having an included angle of $136^{\circ}$ between the opposite faces of the pyramid. If the applied load is 10 kg and the average length of diagonals of square indentation is 0.5 mm , the Vickers hardness in $\mathrm{kg} \mathrm{mm}^{-2}$ is $\qquad$ (round off to nearest integer)
Q. 19 The drift mobility of electron in an n-type Si crystal doped with $\mathbf{1 0}^{\mathbf{1 6}} \mathbf{c m}^{-3}$ phosphorous atoms is $\mathbf{1 3 5 0} \mathrm{cm}^{2} V^{-1} \mathrm{~s}^{-1}$. The electrical conductivity in $\Omega^{-1} \mathbf{m}^{-1}$ is $\qquad$ (round off to nearest integer)
(Given: Intrinsic charge concentration of Si=1.45 $\times \mathbf{1 0}^{10} \mathbf{~ c m}^{-3}$;
Charge of an electron, $e=1.6 \times 10^{-19} \mathrm{C}$ )
Q. 20 At 1000 K , the linear thermal expansion coefficients of graphite, parallel and perpendicular to the graphite layers, are $0.8 \times 10^{-6} \mathrm{~K}^{-1}$ and $29 \times 10^{-6} \mathrm{~K}^{-1}$, respectively. The percentage increase in the volume of graphite when heated from 900 K to 1100 K is $\qquad$ (round off to 2 decimal places)

| Q.21 | A certain ceramic has a theoretical density and sintered density of 6.76 g <br> $\mathrm{~cm}^{-3}$ and 6.60 g cm <br> porosity. For a sintered cube of side 2 cm, the required side of the cubic greent <br> compact in cm is <br> (round off to 2 decimal places) |
| :--- | :--- |

| Q. 22 | When a metal $(\mathrm{M})$ is immersed in de-aerated acid electrolyte, it polarizes <br> anodically by 0.4 V . The $\mathrm{M} / \mathrm{M}^{\mathrm{n}+}$ exchange current density is $10^{-5} \mathrm{~A} \mathrm{~m}^{-2}$ and <br> Tafel slope is $0.1 \mathrm{~V} /$ decade for the anodic reaction. Assume that corrosion is <br> uniform and, anodic and cathodic reactions are under activation control. <br> The rate of metal dissolution in $\mathrm{A} \mathrm{m}^{-2}$ is _ (round off to 1 decimal <br> place) |
| :--- | :--- |

## END OF THE QUESTION PAPER

Fluid Mechanics (XE-B)

## Fluid Mechanics (XE-B)

Q. 1 - Q. 8 Multiple Choice Question (MCQ), carry ONE mark each (for each wrong answer: - 1/3).

| Q. 1 | The general relationship between shear stress, $\tau$, and the velocity gradient <br> $\left(\frac{d u}{d y}\right)$ for a fluid is given by $\tau=k\left(\frac{d u}{d y}\right)^{n}$, where $k$ is a constant with <br> appropriate units. The fluid is Newtonian if |
| :--- | :--- |
| (A) | $n>1$ |
| (B) | $n<1$ |
| (C) | $n=1$ |
| (D) | $n=0$ |

| Q.2 | Which one of the following options is TRUE? |
| ---: | :--- |
| (A) | Pathlines and streaklines are the same in an unsteady flow, and streamlines are <br> tangential to the local fluid velocity at a point. |
| (B) | Streamlines are perpendicular to the local fluid velocity at a point, and <br> streamlines and streaklines are the same in a steady flow. |
| (C) | Pathlines and streaklines are the same in an unsteady flow, and streamlines and <br> streaklines are the same in a steady flow. |
| (D) | Streamlines are tangential to the local fluid velocity at a point, and streamlines <br> and streaklines are the same in a steady flow. |

| Q.3 | If $P_{\text {in }}=1.2 \mathrm{~Pa}$ and $P_{\text {out }}=1.0 \mathrm{~Pa}$ are the average pressures at inlet and outlet <br> respectively for a fully-developed flow inside a channel having a height of 50 <br> cm, then the absolute value of average shear stress (in Pa) acting on the walls <br> of the channel of length $5 \mathbf{~ m}$ is |
| :--- | :--- |
| (A) | 0.005 |
| (B) | 0.02 |
| (C) | 0.01 |
| (D) | 0.05 |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Fluid Mechanics (XE-B)

| Q. 4 | Consider the fully-developed flow of a Newtonian fluid (density $\rho$; <br> viscosity $\mu$ ) through a smooth pipe of diameter $D$ and length $L$. The <br> average velocity of the flow is $V$. If the length of the pipe is doubled, <br> keeping $V, D, \rho, \mu$ constant, the friction factor |
| :--- | :--- |
| (A) | increases by two times |
| (B) | remains the same |
| (C) | decreases by two times |
| (D) | increases by four times |

| Q. 5 | The absolute value of pressure difference between the inside and outside of <br> a spherical soap bubble of radius, $R$, and surface tension, $\gamma$, is: |
| :--- | :--- |
| (A) | $\frac{2 \gamma}{R}$ |
| (B) | $\frac{\gamma}{R}$ |
| (C) | $\frac{\gamma}{2 R}$ |
| (D) | $\frac{4 \gamma}{R}$ |

| Q.6 | Which one of the following statements is TRUE about the continuity <br> equation $\frac{\partial u}{\partial x}+\frac{\partial v}{\partial y}+\frac{\partial w}{\partial z}=0$ (where $u, v, w$ are the velocity components along <br> the $x, y$, and $z$ coordinates respectively): |
| ---: | :--- |
| (A) | The equation is valid only for steady incompressible flows. |
| (B) | The equation is valid for both steady and unsteady incompressible flows. |
| (C) | The equation is valid only for steady compressible flows. |
| (D) | The equation is valid only for unsteady compressible flows. |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Fluid Mechanics (XE-B)

| Q. 7 | The head loss $\left(K_{L}\right)$ associated with the flow entry of water to an internal <br> passage depends on the shape of the entry. The following figure shows <br> three different types of flow entry into a pipe. Which one of the following <br> relationships correctly represents the head loss associated with the three <br> different flow entries? |
| :--- | :--- |
| (A) | $\left(K_{L}\right)_{a}>\left(K_{L}\right)_{b}>\left(K_{L}\right)_{c}$ |
| (B) | $\left(K_{L}\right)_{b}>\left(K_{L}\right)_{a}>\left(K_{L}\right)_{c}$ |
| (C) | $\left(K_{L}\right)_{b} \leq\left(K_{L}\right)_{a}=\left(K_{L}\right)_{c}$ |

| Q. 8 | The form and friction drags together contribute to the total drag when flow <br> of air occurs past any object. Two orientations of a finite flat plate are <br> shown in the figure. In Orientation-1, the plate is placed perpendicular to <br> the flow while in Orientation-2, the plate is placed parallel to the flow. If <br> the velocity (V) of air in both orientations is the same, which one of the <br> following options is TRUE? |
| :--- | :--- |
| (A) | Orientation-1 has higher form drag and lower friction drag and Orientation-2 <br> has lower form drag and higher friction drag |
| (B) | Orientation-1 has lower form drag and lower friction drag and Orientation-2 <br> has higher form drag and higher friction drag |
| (C) | Orientation-1 has lower form drag and higher friction drag and Orientation-2 <br> has higher form drag and lower friction drag |
| (D) | Orientation-1 has higher form drag and higher friction drag and Orientation-2 <br> has lower form drag and lower friction drag |

Graduate Aptitude Test in Engineering 2021 Organising Institute - IIT Bombay

Fluid Mechanics (XE-B)
Q. 9 Numerical Answer Type (NAT), carry ONE mark each (no negative marks).

| Q. 9 | A spherical ball is steadily supported against gravity by an upward air jet <br> as shown in the figure. Take acceleration due to gravity to be $g=10 \mathrm{~m} / \mathrm{s}^{2}$. <br> The mass flow rate of air, reaching the ball, is $0.01 \mathrm{~kg} / \mathrm{s}$ and the air reaches <br> the ball at an upward velocity of $3 \mathrm{~m} / \mathrm{s}$. Neglecting the buoyancy force, and <br> using the principle of integral momentum balance, the mass (in grams, up <br> to one decimal place) of the ball is__. |
| :--- | :--- |

Fluid Mechanics (XE-B)

| Q. 15 | For the configuration shown in the figure, oil of density $800 \mathrm{~kg} / \mathrm{m}^{3}$ lies above water of density $1000 \mathrm{~kg} / \mathrm{m}^{3}$. Assuming hydrostatic conditions and acceleration due to gravity $g=10 \mathrm{~m} / \mathbf{s}^{\mathbf{2}}$, the length $L$ (in meters, up to one decimal place) of water in the inclined tube is $\qquad$ |
| :---: | :---: |

Q. 16 A two-dimensional Eulerian velocity field is given (in $\mathbf{m} / \mathbf{s}$ ) by $\mathbf{V}=[(\sqrt{5}) x] \mathbf{i}-[(\sqrt{12}) y] \mathbf{j}$, where $x$ and $y$ are the coordinates (in meters) in a Cartesian coordinate system. The magnitude of the acceleration (in $\mathbf{m} / \mathbf{s}^{\mathbf{2}}$, up to one decimal place) of a fluid particle at $x=1 \mathbf{m}$ and $y=-1 \mathbf{m}$ is $\qquad$ .
Q. 17 A large pump is to deliver oil at an average velocity $(V)$ of $1.5 \mathrm{~m} / \mathrm{s}$. The pump has an impeller diameter $(D)$ of $\mathbf{4 0} \mathrm{cm}$ and the pressure rise across the pump is 400 kPa . To design this pump, a lab-scale model pump with an impeller diameter of $\mathbf{4} \mathbf{~ c m}$ is to be used with water as the fluid. The viscosity $(\mu)$ of the oil is $\mathbf{1 0 0}$ times that of water, and the densities $(\rho)$ of oil and water are identical. A complete geometric similarity is maintained between the model and prototype. If the pressure rise is a function only of $V, D, \rho$ and $\mu$, the pressure rise (in kPa , up to one decimal place) across the model pump is $\qquad$ .

| Q. 18 | Water (density $=10^{3} \mathrm{~kg} / \mathrm{m}^{3}$ ) enters steadily into a horizontal pipe bend, <br> which is part of a larger piping system, as shown in the figure. The <br> volumetric flow rate of water is $0.1 \mathrm{~m}^{3} / \mathrm{s}$. The gage pressure at the inlet is <br> 500 kPa , while the exit is open to atmosphere. The $x$-component of the <br> force on the support is $F_{x}$. The absolute value of $F_{x}$ (in kN , up to one <br> decimal place) is __. |
| :--- | :--- |
| area $=100 \mathrm{~cm}^{2}$ |  |

Q. 19

Air (of density $0.5 \mathrm{~kg} / \mathrm{m}^{3}$ ) enters horizontally into a jet engine at a steady speed of $200 \mathrm{~m} / \mathrm{s}$ through an inlet area of $1.0 \mathrm{~m}^{2}$. Upon entering the engine, the air passes through the combustion chamber and the exhaust gas exits the jet engine horizontally at a constant speed of $700 \mathrm{~m} / \mathrm{s}$. The fuel mass flow rate added in the combustion chamber is negligible compared to the air mass flow rate. Also neglect the pressure difference between the inlet air and the exhaust gas. The absolute value of the horizontal force (in kN , up to one decimal place) on the jet engine is $\qquad$ .

Fluid Mechanics (XE-B)

| Q. 20 | Water discharges from a cylindrical tank through an orifice, as shown in <br> the figure. The flow is considered frictionless. Initially, the water level in <br> the tank was $\boldsymbol{h}_{\mathbf{1}}=\mathbf{2} \mathbf{~} \mathbf{m}$. The diameter of the tank is $\boldsymbol{D}=\mathbf{1} \mathbf{~} \mathrm{m}$, while the <br> diameter of the jet is $\boldsymbol{d}=10 \mathrm{~cm}$, and the acceleration due to gravity is <br> $g=10 \mathrm{~m} / \mathrm{s}^{2}$. The time taken (in seconds, up to one decimal place) for the <br> water level in the tank to come down to $\boldsymbol{h}_{\mathbf{2}}=1 \mathrm{~mm}$ is |
| :--- | :--- |

Q. 21 Water discharges steadily from a large reservoir through a long pipeline, as shown in the figure. The Darcy friction factor in the pipe is $\mathbf{0 . 0 2}$. The pipe diameter is 20 cm and the discharge of water is $360 \mathrm{~m}^{3} / \mathrm{h}$. Water level in the reservoir is 10 m and acceleration due to gravity $g=10 \mathrm{~m} / \mathrm{s}^{2}$. If minor losses are negligible, the length $L$ (in meters, up to one decimal place) of the pipeline is $\qquad$ .

| Q.3 | If $\boldsymbol{\theta}$ is the angle, in degrees, between the longest diagonal of the cube and <br> any one of the edges of the cube, then, $\cos \boldsymbol{\theta}=$ |
| :--- | :--- |
| (A) | $\frac{1}{2}$ |
| (B) | $\frac{1}{\sqrt{3}}$ |
| (C) | $\frac{1}{\sqrt{2}}$ |
| (D) | $\frac{\sqrt{3}}{2}$ |

| Q. 4 | If $\left(x-\frac{1}{2}\right)^{2}-\left(x-\frac{3}{2}\right)^{2}=x+2$, then the value of $x$ is: |
| ---: | :--- |
| (A) | 2 |
| (B) | 4 |
| (C) | 6 |
| (D) | 8 |

| Q. 5 | Pen : Write :: Knife : <br> Which one of the following options maintains a similar logical relation in the <br> above? |
| :--- | :--- |
| (A) | Vegetables |
| (B) | Sharp |
| (C) | Cut |
| (D) | Blunt |

Q. 6 - Q. 10 Multiple Choice Question (MCQ), carry TWO marks each (for each wrong answer: - 2/3).

| Q.6 | Listening to music during exercise improves exercise performance and <br> reduces discomfort. Scientists researched whether listening to music while <br> studying can help students learn better and the results were inconclusive. <br> Students who needed external stimulation for studying fared worse while <br> students who did not need any external stimulation benefited from music. <br> Which one of the following statements is the CORRECT inference of the <br> above passage? |
| ---: | :--- |
| (A) | Listening to music has no effect on learning and a positive effect on physical <br> exercise. |
| (B) | Listening to music has a clear positive effect both on physical exercise and on <br> learning. |
| (C) | Listening to music has a clear positive effect on physical exercise. Music has a <br> positive effect on learning only in some students. |
| (D) | Listening to music has a clear positive effect on learning in all students. Music <br> has a positive effect only in some students who exercise. |

Engineering Mathematics (XE-A)
Q. 4 - Q. 7 Numerical Answer Type (NAT), carry ONE mark each (no negative marks).
Q. 4 Let $\boldsymbol{f}(\boldsymbol{x})$ be a non-negative continuous function of real variable $\boldsymbol{x}$. If the area under the curve $y=f(x)$ from $x=0$ to $x=a$ is $\frac{a^{2}}{2}+\frac{a}{2} \sin a+\frac{\pi}{2} \cos a-\frac{\pi}{2}$, then the value of $f\left(\frac{\pi}{2}\right)$ is___ (round off to one decimal place).

| Q. 5 | If the numerical approximation of the value of the integral $\int_{0}^{4} 2^{\alpha x} d x$ using <br> the Trapezoidal rule with two subintervals is 9, then the value of the real <br> constant $\alpha$ is <br> (round off to one decimal place). |
| :--- | :--- |

Q. 6 l|llation | Let the transformation |
| :--- |
| equation |

$$
x \frac{d^{2} y}{d x^{2}}+2(1-x) \frac{d y}{d x}+(x-2) y=0 ; x>0
$$

to

$$
\alpha x \frac{d^{2} v}{d x^{2}}+2 \beta \frac{d v}{d x}+3 \gamma v=0
$$

where $\alpha, \beta, \gamma$ are real constants. Then, the arithmetic mean of $\alpha, \beta, \gamma$ is $\qquad$ (round off to three decimal places).

## Q. 7

A person, who speaks the truth 3 out of 4 times, throws a fair dice with six faces and informs that the outcome is 5 . The probability that the outcome is really 5 is $\qquad$ (round off to three decimal places).
