

XE : ENGINEERING SCIENCES

Duration : Three Hours

Maximum Marks :150

Read the following instructions carefully

1. This question paper contains **64** printed pages including pages for rough work. Please check all pages and report discrepancy, if any.
2. Write your registration number, your name and name of the examination centre at the specified locations on the right half of the ORS.
3. Using HB pencil, darken the appropriate bubble under each digit of your registration number and the letters corresponding to your paper code.
4. All the questions in this question paper are of objective type.
5. Questions must be answered on **Objective Response Sheet (ORS)** by darkening the appropriate bubble (marked A, B, C, D) using HB pencil against the question number on the left hand side of the ORS. **Each question has only one correct answer.** In case you wish to change an answer, erase the old answer completely. More than one answer bubbled against a question will be treated as a wrong answer.
6. This question paper contains **nine** sections as listed below. Section A is compulsory. Choose **two** more sections from the remaining sections **B through I.**

Section	Page	Section	Page
A. Engineering Mathematics	02	F. Solid Mechanics	35
B. Computational Science	06	G. Thermodynamics	44
C. Electrical Sciences	13	H. Polymer Science and Engineering	50
D. Fluid Mechanics	22	I. Food Technology	55
E. Materials Science	30		

Using HB pencil, mark the sections you have chosen by darkening the appropriate bubbles on the left hand side of the **Objective Response Sheet (ORS)** provided. **Make sure you have correctly bubbled the sections you have chosen. ORS will not be evaluated if this information is NOT marked.**

7. The XE Engineering Mathematics section (A), which is compulsory, carries 30 marks. Questions 1 through 6 are 1-mark questions, and questions 7 through 18 are 2-mark questions.
8. Each of the other XE sections (B through I) carry 60 marks. Questions 1 through 8 are 1-mark questions, questions 9 through 34 are 2-mark questions. Questions 29 and 30 are a set of common data questions. The question pairs (31, 32) and (33, 34) are questions with linked answers. The answer to the second question of the above pairs will depend on the answer to the first question of the pair. If the first question in the linked pair is wrongly answered or is un-attempted, then the answer to the second question in the pair will not be evaluated.
9. Un-attempted questions will carry zero marks.
10. **NEGATIVE MARKING:**
(Section A): For Q.1 to Q.6, **0.25** mark will be deducted for each wrong answer. For Q.7 to Q.18, **0.5** mark will be deducted for each wrong answer.
(Sections B through I): For Q.1 to Q.8, **0.25** mark will be deducted for each wrong answer. For Q.9 to Q.30, **0.5** mark will be deducted for each wrong answer. For the pairs of questions with linked answers, there will be negative marks only for wrong answer to the first question, i.e. for Q.31 and Q.33, **0.5** mark will be deducted for each wrong answer. There is no negative marking for Q.32 and Q.34.
11. Calculator **without data connectivity** is allowed in the examination hall.
12. Charts, graph sheets and tables are NOT allowed in the examination hall.
13. Rough work can be done on the question paper itself. Additional blank pages are given at the end of the question paper for rough work.

A : ENGINEERING MATHEMATICS (*Compulsory*)

Q. 1 – Q. 6 carry one mark each.

Q.1 If the characteristic equation of a 3×3 matrix is $\lambda^3 - \lambda^2 + \lambda - 1 = 0$, then the matrix should be

- (A) Hermitian
- (B) unitary
- (C) skew symmetric
- (D) identity

Q.2 $\lim_{(x,y) \rightarrow (0,0)} \frac{x^4 + xy}{x^3 - y^3}$ is

- (A) 0
- (B) 1
- (C) -1
- (D) does not exist

Q.3 If $f(z) = u + iv$ is an analytic function and $u - v = (x - y)^3 + kxy(x - y)$, then k is

- (A) 2
- (B) -4
- (C) 6
- (D) -8

Q.4 The directional derivative at the point $P(1,2,3)$ to the surface

$x^2 + \frac{y^2}{4} + \frac{z^2}{9} = 3$ in the direction of the vector \overrightarrow{OP} , where O denotes the origin, is

- (A) 0
- (B) $\frac{2}{\sqrt{14}}$
- (C) $\frac{3}{\sqrt{14}}$
- (D) $\frac{6}{\sqrt{14}}$

Q.5 If the solution of the differential equation

$$\frac{dy}{dx} + P(x)y = xy^3$$

$$\text{is } y^2(1 + ce^{x^2}) = 1,$$

c being an arbitrary constant, then $P(x)$ is

- (A) $-x$
- (B) $\frac{x}{2}$
- (C) x
- (D) $2x$

Q.6 The system of equations

$$ax + by + a^2 = 0$$

$$bx + ay - b^2 = 0$$

$$x + y + a - b = 0$$

- (A) admits unique solution if $a = b \neq 0$
 (B) admits unique solution if $a = -b \neq 0$
 (C) admits unique solution if $a = b = 0$
 (D) does not admit unique solution

Q. 7 to Q.18 carry two marks each.

Q.7 The matrix

$$\begin{bmatrix} l & 0 & \sin \theta \\ 0 & 1 & m \\ n & 0 & \cos \theta \end{bmatrix}$$

is orthogonal, if

- (A) $l = -\sin \theta, m = -\cos \theta, n = 0$
 (B) $l = -\sin \theta, m = 0, n = \cos \theta$
 (C) $l = \cos \theta, m = \sin \theta, n = 0$
 (D) $l = -\cos \theta, m = 0, n = \sin \theta$

Q.8 The radius of convergence of the real power series

$$\sum_{m=0}^{\infty} \frac{(m!)^2}{(2m+1)!} x^m \text{ is}$$

- (A) 4
 (B) 3
 (C) 2
 (D) 1

Q.9 The value of

$$\left(\int_0^{\frac{\pi}{2}} (\sin \theta)^{3/4} d\theta \right) \times \left(\int_0^{\frac{\pi}{2}} (\sin \theta)^{-3/4} d\theta \right)$$

is

- (A) $\frac{2\pi}{3}(\sqrt{2} + 1)$
 (B) $\frac{2\pi}{3}(\sqrt{2} - 1)$
 (C) $\frac{\pi}{2}\sqrt{3}$
 (D) $-\frac{\pi}{2}\sqrt{3}$

2008

Q.10 If $f(z) = y(1+x^2) + x^2 + i(y^2 + 2y)x$ is differentiable at a point $z = z_0$, then $f'(z_0)$ is

- (A) 0
- (B) 1
- (C) i
- (D) $-i$

Q.11 The value of the integral

$$\oint_{|z|=2} \frac{e^{1/z}}{(z-1)^2} dz$$

is

- (A) 0
- (B) $(2e\pi)i$
- (C) $(4e\pi)i$
- (D) $(4\pi)i$

Q.12 The absolute value of the integral

$$\oint_c (-zdx + xdy + ydz),$$

where c is the curve obtained by the intersection of $x^2 + y^2 = a^2, a > 0$ and $y = z$, is

- (A) $\frac{\pi a^2}{\sqrt{2}}$
- (B) $\frac{\pi a^2}{\sqrt{3}}$
- (C) $\pi a^2 \sqrt{2}$
- (D) $2\pi a^2$

Q.13 One of the values of

$$\frac{1}{(4x^2 D^2 + 8xD + 1)} (\ln x) \text{ where } D \equiv \frac{d}{dx},$$

is

- (A) $\ln x + 4$
- (B) $\ln x - 4$
- (C) $4 \ln x - 4$
- (D) $4 \ln x + 4$

Q.14 A particular integral of the differential equation

$$\frac{d^2 y}{dx^2} - y = \operatorname{sech} x$$

is

- (A) $-(\cosh x) (\ln \cosh x) + x \sinh x$
- (B) $-(\sinh x) (\ln \cosh x) + x \cosh x$
- (C) $(\cosh x) (\ln \sinh x) + x \sinh x$
- (D) $(\sinh x) (\ln \cosh x) - x \cosh x$

Q.15 If $u = u(x, t)$ is such that

$$\frac{\partial^2 u}{\partial t^2} = 4 \frac{\partial^2 u}{\partial x^2}, \quad 0 \leq x \leq \pi, \quad t \geq 0,$$

$$u(0, t) = u(\pi, t) = 0,$$

$$u(x, 0) = 0,$$

$$\frac{\partial u}{\partial t}(x, 0) = \sin x,$$

then $u\left(\frac{\pi}{3}, \frac{\pi}{6}\right)$ is

(A) $\frac{3}{4}$

(B) $\frac{3}{8}$

(C) $\frac{\sqrt{3}}{4}$

(D) $\frac{\sqrt{3}}{8}$

Q.16 The two lines of regression of the variables x and y are

$$4x + 2.4y = 20 \text{ and } 1.6x + 4y = 12.$$

The coefficient of correlation between x and y is

(A) 0.49

(B) -0.49

(C) 0.35

(D) -0.35

Q.17 While solving the initial value problem

$$\frac{dy}{dx} + ky = 0, \quad y(0) = 1$$

at $x = h$ by fourth order Runge-Kutta method, the expression for k_3 is

(A) $-kh + \frac{(kh)^2}{2!} - \frac{(kh)^3}{3!}$

(B) $-kh + \frac{(kh)^2}{2} - \frac{(kh)^3}{3}$

(C) $-kh + \frac{(kh)^2}{2} - \frac{(kh)^3}{4}$

(D) $-k\left(1 + \frac{h}{2} - \frac{h^2}{3}\right)$

Q.18 On solving the system of equations

$$4x + z = 5$$

$$x + 2y + 3z = 1$$

$$-y - 4z = 3,$$

by LU -decomposition with $u_{ii} = 1$ for $i = 1, 2, 3$; the values of u_{23} and l_{33} are respectively

(A) 1.375 and -4.250

(B) 2.750 and -3.625

(C) 1.375 and -2.625

(D) 2.750 and -4.250

END OF SECTION – A

B : COMPUTATIONAL SCIENCE**Q. 1 – Q. 8 carry one mark each.**

Q.1 Which one of the following is not a physical component of a computer ?

- (A) CPU (B) RAM
(C) Assembler (D) Mother Board

Q.2 A number whose representation in base b is 64, is equal to 100 in the decimal representation. The value of the base b is

- (A) 4 (B) 8 (C) 12 (D) 16

Q.3 Evaluation of the integral

$$\int_1^2 \frac{dx}{\sqrt{1+x^2}}$$

using 2 segment trapezoidal rule with equal intervals gives the result

- (A) 0.566 (B) 0.564 (C) 0.562 (D) 0.560

Q.4 A continuous function $f(x)$ defined in the interval $[a, b]$ is such that $f(a)f(b) < 0$. A possible number of simple roots of the equation $f(x) = 0$ in this interval is

- (A) 0 (B) 1 (C) 2 (D) 4

Q.5 The function e^x is expanded about the point $x = 0$ in a Taylor polynomial $P_n(x)$ of degree n . The value of n necessary to approximate e^x to an accuracy of 10^{-5} in $[0, 0.5]$ is

- (A) 5 (B) 6 (C) 7 (D) 8

Q.6 The eigenvalues of the matrix $\begin{pmatrix} 0 & -1 \\ 1 & 0 \end{pmatrix}$ are

- (A) 1, -1 (B) i, i
(C) 1, 1 (D) $i, -i$

Q.7 Consider the following code segment in Fortran:

```
REAL PARAMETER :: X=10.0, Y=2.0, Z=5.0
REAL :: RESULT
RESULT = X/Y+Y*Z**2
```

The value of the result when this code segment is executed, is

- (A) 0.098 (B) 0.192
(C) 55.0 (D) 105.0

Q.8 The value of the integral $\int_1^2 \frac{dx}{x}$ obtained by using Simpson's 1/3 rule, with 3 points, is

- (A) 0.694 (B) 0.693 (C) 0.692 (D) 0.691

Q. 9 to Q.30 carry two marks each.

- Q.9 The hypotenuse c and a side b of a right triangle are found by measurement to be 13 cm and 5 cm respectively. The possible error in the measurement of the hypotenuse is 0.2 cm and that in the side b is 0.1 cm. The maximum possible error (in cm) in the calculation of the third side is

(A) 0.26 (B) 0.22 (C) 0.17 (D) 0.10

- Q.10 One of the eigenvalues of a 3×3 matrix M is 3. If the determinant of the matrix M is 24 and the trace is 9, then the smallest eigenvalue of the matrix M^{-1} is

(A) 1/8 (B) 1/4 (C) 1/3 (D) 1/2

- Q.11 A quadrature formula is given by

$$\int_0^1 f(x) dx = pf(0) + qf(0.5) + rf(1)$$

where the coefficients p , q , and r are determined by comparing the right hand side of the above formula with the exact value of the integral for a quadratic polynomial. The formula corresponds to

- (A) Two segment trapezoidal rule
 (B) One segment trapezoidal rule
 (C) Simpson's 3/8 rule
 (D) Simpson's 1/3 rule

- Q.12 The set of simultaneous equations

$$4x - y = 15$$

$$x + 5y = 9$$

is to be solved using Jacobi's iterative method. Starting with the initial values $x = 2, y = 2$, the values of x and y after two iterations are, respectively,

- (A) 4.25, 0.95 (B) 4.25, 1.4
 (C) 4.1, 0.95 (D) 4.1, 1.4

- Q.13 The lower triangular matrix L in the LU factorization of the matrix

$$\begin{pmatrix} 25 & 5 & 4 \\ 10 & 8 & 16 \\ 8 & 10 & 22 \end{pmatrix} \text{ is written as } \begin{pmatrix} 1 & 0 & 0 \\ L_{21} & 1 & 0 \\ L_{31} & L_{32} & 1 \end{pmatrix}. \text{ The element } L_{32} \text{ is}$$

- (A) 1.0 (B) 1.4 (C) 0.4 (D) 0.32

- Q.14 For a function $f(x)$ whose second derivative $f''(x)$ has a maximum value 12 in the interval $[0, 1]$. The number of segments required to integrate $\int_0^1 f(x) dx$ with an accuracy of 0.0001 using trapezoidal rule is

- (A) 10 (B) 12 (C) 100 (D) 1000

- Q.15 An approximate solution of the equation $x^3 - 3x + 1 = 0$ is 0.347296. Which of the following iterating functions will converge most rapidly to this root?

(A) $x_{n+1} = \frac{1}{(3 - x_n^2)}$

(B) $x_{n+1} = \frac{1}{3}(x_n^3 + 1)$

(C) $x_{n+1} = \frac{1}{5}(x_n^3 + 2x_n + 1)$

(D) $x_{n+1} = \frac{1}{27}(10x_n^3 - 3x_n + 10)$

Q.22 A portion of a Fortran 90 program is reproduced below:

```
PROGRAM CHECK_CYCLE
  DO I =1, 10, 2
    IF (MOD(I, 3) == 0 ) CYCLE
    PRINT *, I
  END DO
END PROGRAM CHECK_CYCLE
```

The result displayed by the program is

- (A) 1
5
7
- (B) 1
3
5
- (C) 1
3
7
- (D) 3
5
7

Q.23 (P), (Q), (R) and (S) are separate segments of Fortran 90 code.

- (P) IF (A > B) P=Q
- (Q) SUBROUTINE SWAP(A,B)
INTEGER, INTENT(IN):: A, B
TEMP = A
A = B
B = TEMP
END SUBROUTINE SWAP
- (R) IF (A /= B) X = Y-Z
ELSE
X=Y+Z
ENDIF
- (S) DO I = 1, N, 3
C(I) = A(I) + B(I)
END DO

Which segments have syntax errors?

- (A) P, Q (B) Q, R (C) R, S (D) P,S

- Q.24 A Fortran-90 subroutine for Gauss-Siedel Method to solve a set of N simultaneous equations $[A][X]=[C]$ is given below.

```

SUBROUTINE SIEDEL(A, C, X, N, IMAX)
REAL:: SUM
REAL, DIMENSION(N,N):: A
REAL, DIMENSION(N):: C, X
DO K = 1, IMAX
DO I = 1, N
SUM = 0.0
DO J = 1, N
IF ( I /= J ) THEN
SUM = SUM+A(I,J)*X(J)
ENDIF
ENDDO
*****
ENDDO
ENDDO
END SUBROUTINE SIEDEL

```

The missing statement in the program, indicated by *********, is

- (A) $X(I) = C(I) + SUM$
 (B) $X(I) = C(I) - SUM$
 (C) $X(I) = (C(I) + SUM)/A(I, I)$
 (D) $X(I) = (C(I) - SUM)/A(I, I)$

- Q.25 What is the result of the following C program?

```

int main()
{
int i, sum=0;
for ( i = 0; i < 25; i++ ) {
if ( i > 10 ) continue;
sum += i;
}
printf("%d\n", sum);
return 1;
}

```

- (A) 25 (B) 45 (C) 55 (D) 325

- Q.26 Consider the following C code.

```

int x = 1, y = 5, z;
z = x++<<--y;

```

The values of x,y and z after the execution are

- (A) 2, 4, 16 (B) 2, 4, 32 (C) 2, 4, 64 (D) 1, 5, 32

- Q.27 A two dimensional array is declared as `int num[3][3]`. Then the result of the expression `*(num+1)` is

- (A) The value of `num[1][0]`
 (B) The value of `num[0][1]`
 (C) The address of `num[1][0]`
 (D) The address of `num[0][1]`

Q.28 A C function named `func` is defined as follows:

```
int func(int a, int b) {
    if ( (a == 1) || (b == 0) || (a == b) ) return 1;
    return func(a-1,b) + func(a-1,b-1);
}
```

What is the result of `func(4, 2)`?

- (A) 12 (B) 6 (C) 3 (D) 1

Common Data Questions

Common Data for Questions 29 and 30:

The following table gives the values of a function f at three discrete points.

x	0.5	0.6	0.7
$f(x)$	0.4794	0.5646	0.6442

Q.29 The value of $f'(x)$ at $x = 0.5$ accurate upto two decimal places, is

- (A) 0.82 (B) 0.85
(C) 0.88 (D) 0.91

Q.30 The value of $f(x)$ at $x = 0.55$ obtained using Newton's interpolation formula, is

- (A) 0.5626 (B) 0.5227
(C) 0.4847 (D) 0.4749

Linked Answer Questions: Q.31 to Q.34 carry two marks each.

Statement for Linked Answer Questions 31 and 32:

A modified Newton-Raphson method is used to find the roots of an equation $f(x) = 0$ which has multiple zeros at some point $x = p$ in the interval $[a, b]$. If the multiplicity M of the root is known in advance, an iterative procedure for determining p is given by

$$P_{k+1} = P_k - M \frac{f(P_k)}{f'(P_k)} \text{ for } k = 0, 1, 2, \dots$$

Q.31 The equation $f(x) = x^3 - 1.8x^2 - 1.35x + 2.7 = 0$ is known to have a multiple root in the interval $[1, 2]$. Starting with an initial guess $x_0 = 1.0$ in modified Newton-Raphson method, the root, correct up to three decimal places, is

- (A) 1.500 (B) 1.200
(C) 1.578 (D) 1.495

Q.32 The root of the derivative of $f(x)$ in the same interval is

- (A) 1.500 (B) 1.200
(C) 1.578 (D) 1.495

Statement for Linked Answer Questions 33 and 34:

The values of a function $f(x)$ at four discrete points are as follows

x	0	1	3	4
$f(x)$	-12	0	6	12

- Q.33 The function may be represented by a polynomial $P(x) = (x - a)R(x)$, where $R(x)$ is a polynomial of degree 2, obtained by Lagrange's interpolation and a is a real constant. The polynomial $R(x)$ is
- (A) $x^2 + 6x + 12$
(B) $x^2 + 6x - 12$
(C) $x^2 - 6x - 12$
(D) $x^2 - 6x + 12$
- Q.34 The value of the derivative of the interpolated polynomial $P(x)$ at the position of its real root is
- (A) -6 (B) -4 (C) 6 (D) 7

END OF SECTION - B

C : ELECTRICAL SCIENCES

Q. 1 – Q. 8 carry one mark each.

Q.1 An LC circuit is shown in the figure. The inductor current, i , when the switch S is opened at $t = 0$ is best represented by

Q.2 In the figure shown, power supplied by the current source is

- (A) 0.0 W
(B) 5.0 W, delivered
(C) 10.0 W, delivered
(D) 10.0 W, absorbed

2008

- Q.3 An inductor of 0.4 H was constructed with 20 turns on an iron core. If 10 additional turns in the same sense are added to the coil on the same core, the new inductance will be
 (A) 0.9 H (B) 0.8 H (C) 0.7 H (D) 0.6 H

- Q.4 A three-phase star-connected, slip-ring induction motor has per-phase standstill rotor resistance, $r_2 = 0.01 \Omega$ and reactance, $x_2 = 0.05 \Omega$. To achieve maximum torque at starting, the external per-phase resistance to be connected at the slip-rings is
 (A) 0.01Ω (B) 0.02Ω (C) 0.03Ω (D) 0.04Ω

- Q.5 The device structure shown in the figure is that of a

- (A) pnp BJT
 (C) npn BJT

- (B) p-channel MOSFET
 (D) n-channel MOSFET

- Q.6 The input voltage applied to the rectifier circuit shown in the figure is $v_{in} = V_m \sin(2\pi 50t)$. The steady state output voltage V_o of the rectifier, under no-load condition, is

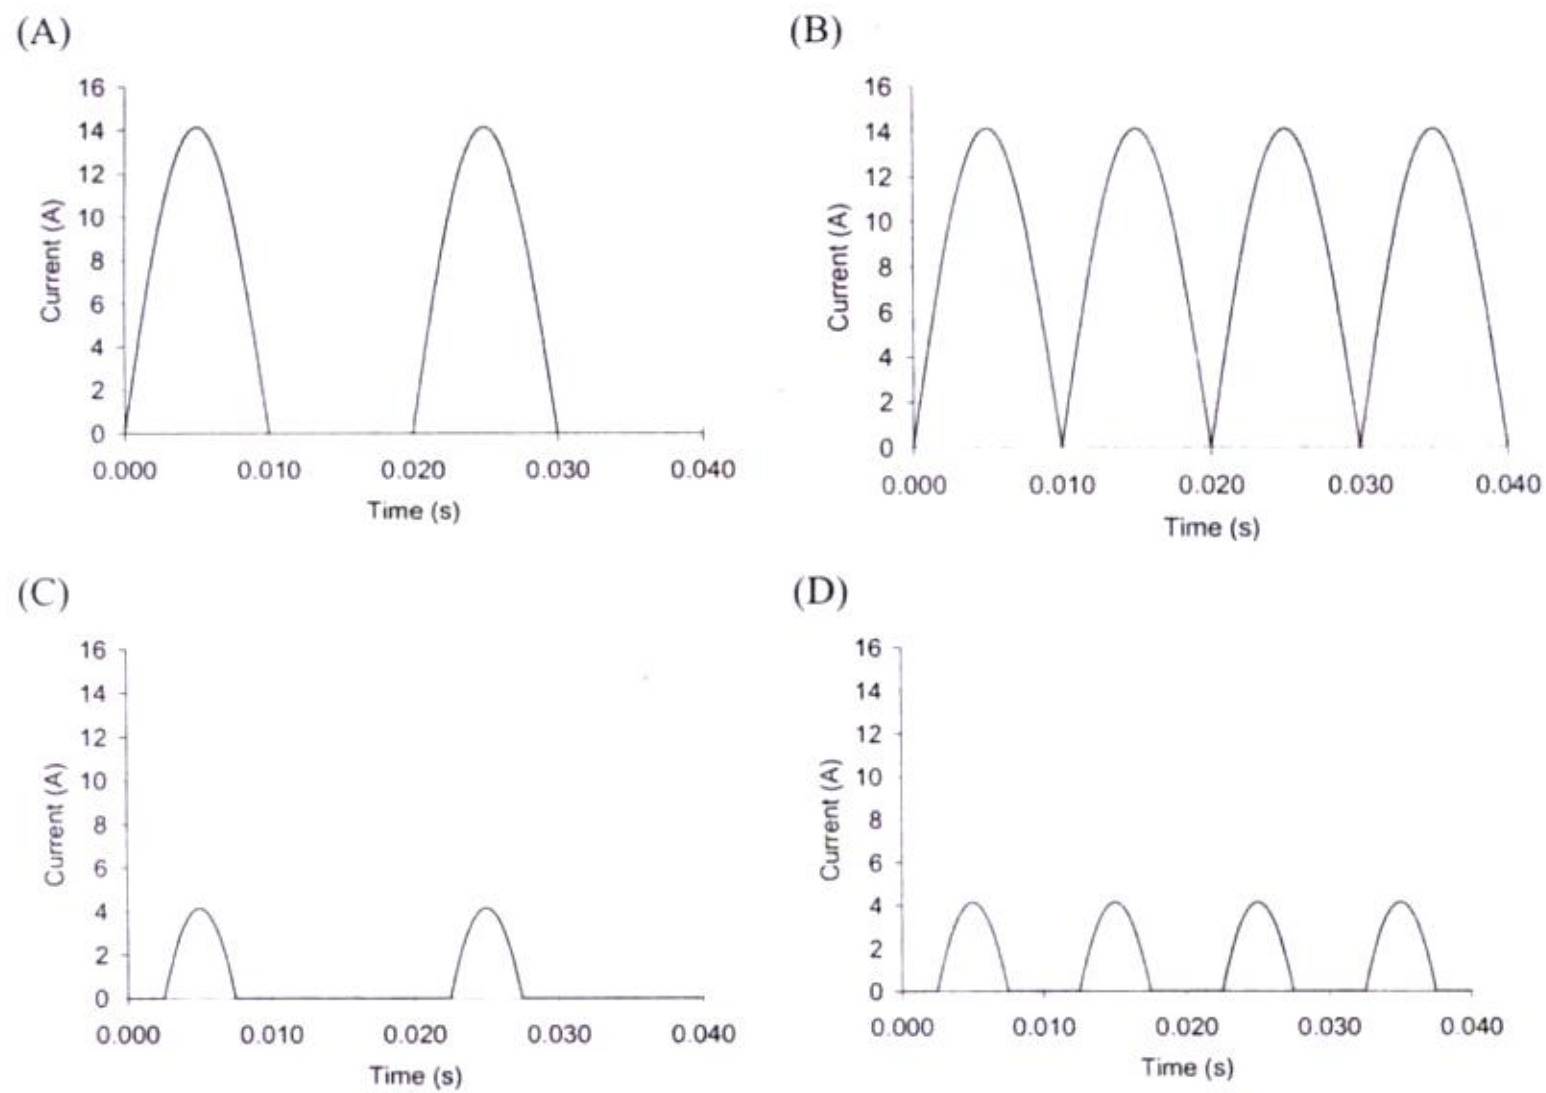

- (A) V_m

- (B) $\sqrt{2} V_m$

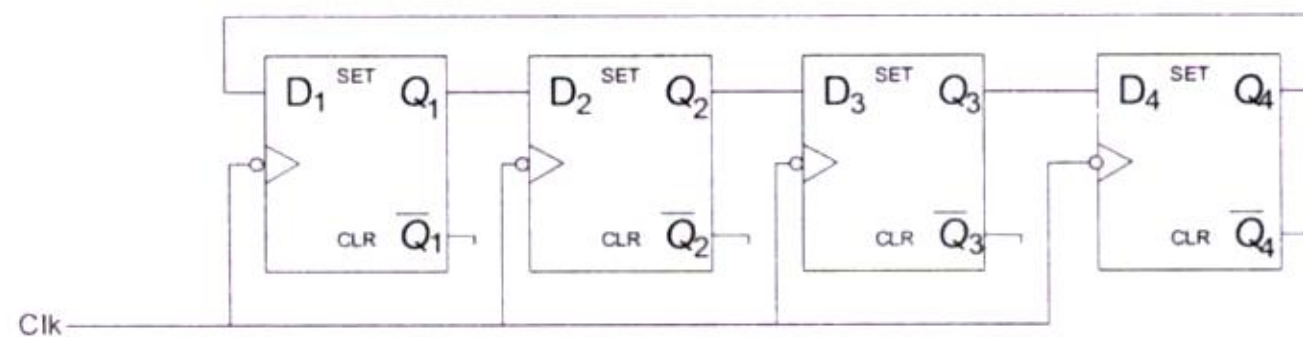

- (C) $2 V_m$

- (D) $2\sqrt{2} V_m$

- Q.7 In the figure shown, the diode is ideal and the zener voltage is 10 V. The input voltage, $v_m = 10\sqrt{2} \sin(100\pi t)$ V. The wave-shape of the current through the resistor, R is represented by

- Q.8 For the counter shown in figure, the present count, $Q_1Q_2Q_3Q_4$ is 0100. The count after two clock pulses will be

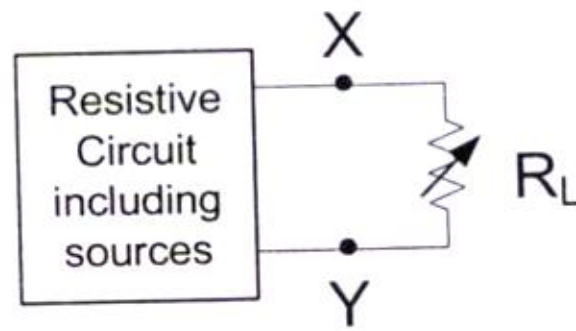

- (A) 0100 (B) 0001 (C) 0010 (D) 1000

Q. 9 to Q.30 carry two marks each.

- Q.9 An incandescent lamp is rated for 200 V, 100 W. Neglect temperature effects. When the lamp consumes 121 W, the supply voltage is

- (A) 242 V (B) 220 V (C) 180 V (D) 165 V

- Q.10 In the circuit shown in the figure, the load resistance, R_L draws 15 A when it is 10Ω and 20 A when it is 5Ω . The open circuit voltage across XY is

- (A) 100 V (B) 150 V (C) 200 V (D) 300 V

- Q.11 Three 15 V batteries are connected to a resistive network as shown in the figure. The current in each resistor is

- (A) 0.0 A (B) 0.667 A (C) 1.0 A (D) 1.5 A

- Q.12 At a particular frequency, the impedance across terminals AB in the figure shown is $(6.0 + j0.0)$ ohms. If $R_1 = 12\Omega$, $C_1 = 10\mu\text{F}$, $L_1 = 0.2\text{H}$, $R_2 = 12\Omega$, $L_2 = 0.1\text{H}$, then C_2 is

- (A) $1.414\mu\text{F}$ (B) $5\mu\text{F}$ (C) $12\mu\text{F}$ (D) $20\mu\text{F}$

- Q.13 A transformer is feeding a 2.5 kVA load at 0.8 pf (lag). If its efficiency is 95% and the copper losses equal 55 W, the core loss is
 (A) 25.13 W (B) 50.26 W (C) 100.54 W (D) 125.26 W
- Q.14 The total winding resistance of a single-phase, two-winding transformer is half the magnitude of total impedance of the winding, both referred to the primary side. Considering the input and output voltages to be practically in-phase, the transformer will have zero regulation when the load power factor is
 (A) 60° lagging (B) 60° leading (C) 30° leading (D) 30° lagging
- Q.15 A 220 V dc shunt motor having an armature resistance, $r_a = 0.5 \Omega$ draws an armature current of 40A when running at 1400 rpm. If the load torque is halved at the same field current and maintaining the same terminal voltage, then (neglecting armature reaction) the speed of the motor will be
 (A) 1510 rpm (B) 1485 rpm (C) 1470 rpm (D) 1370 rpm
- Q.16 A 230 V separately excited dc motor has armature resistance, $r_a = 2.0 \Omega$. It draws 15 A when running at a speed N_1 . If the supply to the armature is disconnected, the field excitation and speed remaining unchanged, the voltage at the armature terminals will be
 (A) 0 V (B) 200 V (C) 210 V (D) 240 V
- Q.17 In an induction motor the phase-difference, ϕ , between the voltage applied at the stator terminals and the magnetizing current is
 (A) $\phi = 0^\circ$ (B) $0^\circ < \phi < 90^\circ$ (C) $\phi = 90^\circ$ (D) $90^\circ < \phi < 180^\circ$
- Q.18 A voltage of +5 V is applied (with respect to ground) to both the inputs V1 and V2 of an operational amplifier circuit shown in the figure. $R_1 = 20 \text{ k}\Omega$ and $R_2 = 10 \text{ k}\Omega$. The output voltage, V_o is

- (A) -5 V (B) 0 V (C) 5 V (D) 20 V
- Q.19 A pair of zener diodes each with a forward drop of 0.7 V and a zener voltage of 4.7 V is connected as shown in the figure. The input voltage is $v_{in} = 10\sin(2t)$. The peak-to-peak output voltage, v_o is

- (A) 5.4 V (B) 4.7 V (C) 1.4 V (D) 0.7 V

2008

- Q.20 The npn transistor shown in figure has $h_{fe} = 99$ and $V_{BE} = 0.7$ V. Under quiescent condition, $V_{EG} = 4.3$ V and $I_E = 1$ mA, and the current in R_2 is 0.1 mA. The value of R_1 required for biasing the circuit is

- (A) 10.1 k Ω (B) 90.9 k Ω (C) 100.1 k Ω (D) 150.2 k Ω

- Q.21 The forward characteristics of a p-n diode is given by $i = I_s e^{v/(nV_T)}$ with $n = 2$ and $V_T = 25$ mV. If the diode current is measured to be 100 mA at 0.7 V drop, the diode power dissipation at a diode current of 200 mA is

- (A) 70 mW (B) 140 mW (C) 143 mW (D) 147 mW

- Q.22 For the n-channel JFET shown in the figure the pinch-off voltage, $V_p = -5$ V, and gate source voltage, $V_{GS} = -3$ V. The minimum required drain to source voltage, V_{DS} to operate at pinch-off condition is

- (A) 0 V (B) 2 V (C) 5 V (D) 8 V

Q.23 The Boolean function corresponding to the truth table shown is

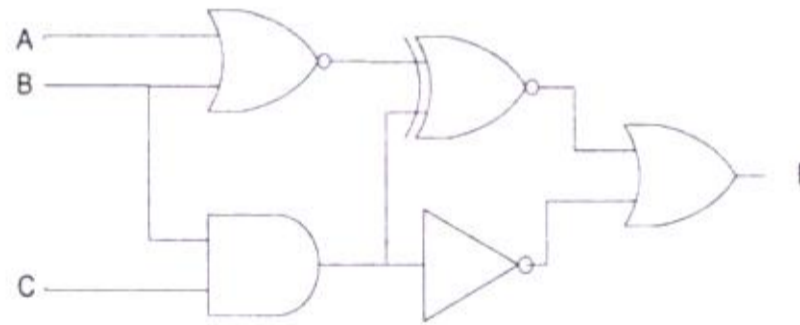

A	B	C	F
0	0	0	1
0	0	1	1
0	1	0	0
0	1	1	1
1	0	0	0
1	0	1	1
1	1	0	0
1	1	1	0

- (A) $F = \bar{A}\bar{B}C + \bar{A}BC + A\bar{B}\bar{C} + \bar{A}\bar{B}\bar{C}$
 (B) $F = ABC + AB\bar{C} + \bar{A}BC$
 (C) $F = ABC + AB\bar{C} + A\bar{B}\bar{C} + \bar{A}\bar{B}\bar{C}$
 (D) $F = \bar{A}\bar{B}C + \bar{A}BC + A\bar{B}\bar{C} + \bar{A}\bar{B}\bar{C}$

Q.24 The decimal number 328 when converted to the base of 9 is equivalent to

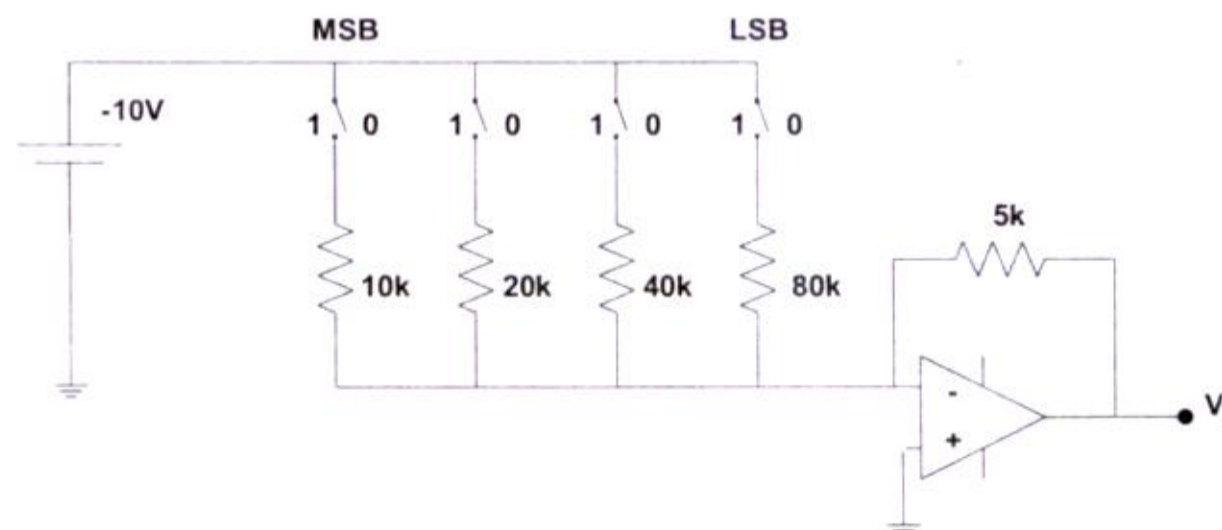

- (A) $(434)_9$ (B) $(424)_9$ (C) $(404)_9$ (D) $(304)_9$

Q.25 The following logic circuit can be represented by the Boolean expression

- (A) $F = \bar{B} + BC + \bar{C}$ (B) $F = \bar{B} + \bar{C}$
 (C) $F = \overline{(B + C)}$ (D) $F = \bar{A} + \bar{B} + \bar{C}$

Q.26 A 4-bit resistor network based D/A converter is shown in the figure. The output corresponding to the number 1010 is

- (A) 5.0 V (B) 6.25 V (C) 7.25 V (D) 10.0 V

- Q.27 Two 10 V square waves of same frequency but 90° out-of-phase to each other are applied to X and Y deflecting plates of a CRO. Both channels are set at 5 V/division and the CRO is operating in the X-Y mode. The display on CRO will be
- (A) A bright circle
 (B) A bright ellipse
 (C) Two bright spots at the diagonal of a faint square
 (D) Four bright spots at the corners of a faint square
- Q.28 A CRO that is used in X-Y mode displays a line inclined at an angle of 135° . The X-channel gain is 5V/division and the Y-channel gain is 10V/division. If the display point at a given instant corresponds to + 3 divisions on the X-axis, the input voltage to the Y-channel at that instant is
- (A) -30 V (B) - 15 V (C) + 15 V (D) + 30 V

Common Data Questions

Common Data for Questions 29 and 30:

A 1.0 kW induction motor has 15 pole-pairs and is supplied from a 60 Hz source. The motor runs at 0.05 slip. The stator loss is 80 W.

- Q.29 The speed of the rotating magnetic field in the motor and the frequency of the rotor induced voltage are
- (A) 120 rpm, 1.5 Hz (B) 120 rpm, 28.5 Hz
 (C) 240 rpm, 3.0 Hz (D) 240 rpm, 57.0 Hz
- Q.30 The rotor copper loss of this induction motor is
- (A) 4.6 W (B) 42 W (C) 46 W (D) 54 W

Linked Answer Questions: Q.31 to Q.34 carry two marks each.

Statement for Linked Answer Questions 31 and 32:

A practical dc voltage source is represented as an ideal dc voltage source in series with an internal resistance. The V-I characteristics of two such sources, E_1 and E_2 , are shown in the figure.

- Q.31 The respective internal resistances of E_1 and E_2 are
- (A) 20Ω , 8Ω (B) 5Ω , 2Ω (C) 8Ω , 20Ω (D) 2Ω , 5Ω
- Q.32 If the two sources, E_1 and E_2 , in question Q.31 are connected in parallel to feed a load of 200Ω resistance, then the load current is in the range
- (A) 0.0 A to 0.5 A (B) 0.5 A to 2.0 A
 (C) 2.0 A to 4.0 A (D) 4.0 A to 8.0 A

Statement for Linked Answer Questions 33 and 34:

A function F , in "Sum of Product (SOP)" form is described by $F = \sum m(0,1,3,4,5,6,7,13,15)$

Q.33 The Karnaugh Map for F is given by (X being don't care)

(A)

AB \ CD	00	01	11	10
00	X	X	X	1
01	X	X	X	X
11	1	X	X	1
10	1	1	1	1

(B)

AB \ CD	00	01	11	10
00	1	1	1	X
01	1	1	1	1
11	X	1	1	X
10	X	X	X	X

(C)

AB \ CD	00	01	11	10
00	1	X	1	X
01	X	1	X	1
11	1	X	X	X
10	X	1	X	1

(D)

AB \ CD	00	01	11	10
00	1	1	X	X
01	X	X	X	X
11	X	1	1	1
10	X	1	1	X

Q.34 Using the Karnaugh Map obtained in question Q.33, the function, F reduces to

(A) $F = \bar{A}\bar{C} + \bar{A}D + AB + BD$

(B) $F = AC + AD + \bar{A}\bar{B} + \bar{B}\bar{D}$

(C) $F = AC + \bar{A}D + \bar{A}\bar{B} + \bar{B}\bar{D}$

(D) $F = \bar{A}\bar{C} + \bar{A}D + \bar{A}\bar{B} + BD$

END OF SECTION - C

D : FLUID MECHANICS**Useful data:**Acceleration due to gravity, $g = 10 \text{ m/s}^2$ Density of water $\rho_w = 1000 \text{ kg/m}^3$ Density of air (unless otherwise specified), $\rho_a = 1.2 \text{ kg/m}^3$ **Q. 1 – Q. 8 carry one mark each.**

- Q.1 A potential function can be defined for a flow if and only if it is
 (A) laminar (B) incompressible (C) steady (D) irrotational
- Q.2 The momentum equation (Euler),

$$\frac{\partial u}{\partial t} + u \frac{\partial u}{\partial x} + v \frac{\partial u}{\partial y} + w \frac{\partial u}{\partial z} = -\frac{1}{\rho} \frac{\partial p}{\partial x},$$
 is valid if and only if the flow is
 (A) unsteady (B) laminar (C) steady (D) inviscid
- Q.3 Which of the following statements is true for two kinematically similar flows?
 (A) They must be geometrically similar but may or may not be dynamically similar
 (B) They must be dynamically similar but may or may not be geometrically similar
 (C) They must be neither geometrically similar nor dynamically similar
 (D) They must be both geometrically similar and dynamically similar
- Q.4 The Darcy-Weisbach equation for head loss is valid
 (A) only for laminar flow through smooth pipes
 (B) only for turbulent flow through rough pipes
 (C) for laminar or turbulent flows through smooth pipes only
 (D) for laminar or turbulent flow through smooth or rough pipes
- Q.5 A ceiling fan of diameter, D , and weight, W , is suspended at a distance, L , below the ceiling by a support rod. When the fan spins at high speed and creates a downward flow the force exerted by the fan on the support rod is
 (A) greater than W (B) less than W
 (C) equal to W (D) greater than or less than W depending on the value of D/L
- Q.6 Logs of the following cross-section are fully submerged horizontally in water

Solid Cylinder

Hollow Cylinder

Solid Square

Hollow Square

The buoyancy force passes through the point 'O' for which of the following cross-sections?

- (A) Solid cylinder only (B) Solid cylinder and hollow cylinder only
 (C) All the cross sections except hollow square (D) All the cross-sections

- Q.7 A fluid particle can accelerate
- (A) in a steady non-uniform flow-field
 - (B) *only* if the flow field is both unsteady and non-uniform
 - (C) *only* in an unsteady flow-field
 - (D) in a steady uniform flow-field if the viscous forces are large enough
- Q.8 A fluid element is said to have vorticity with respect to a reference frame if in that reference frame
- (A) it travels along a circular streamline
 - (B) it travels along a circular pathline
 - (C) it revolves about any arbitrary point in the flow-field
 - (D) it rotates about its own centre of mass as it moves

Q. 9 to Q.30 carry two marks each.

- Q.9 A cubical block of melting ice (20 cm x 20 cm x 20 cm) rests on a smooth horizontal floor over a layer of water of 0.1 mm thickness. To pull the block at a speed of 1 m/s a force of 1 N is required. What is the force required to pull the block at a speed of 2 m/s?
- (A) 0.5 N (B) 1 N (C) 2 N (D) 4 N
- Q.10 Which of the following statements is true?
- (A) Eulerian description of fluid motion follows individual fluid particles
 - (B) Lagrangian description of fluid motion is a field description
 - (C) Both Eulerian and Lagrangian descriptions follow individual fluid particles but in different reference frames
 - (D) Eulerian description is a field description while Lagrangian description follows individual fluid particles
- Q.11 The velocity in a wind tunnel is being measured using a Pitot-static tube connected to a vertical U-tube manometer. The density of air is 1.2 kg/m^3 and the deflection of the manometer is 24 mm. The manometric fluid is water. The velocity measured by the Pitot-static tube is:
- (A) 14.1 m/s (B) 20.0 m/s (C) 22.0 m/s (D) 400 m/s
- Q.12 The stream function for a potential flow around a corner is given by $\psi(x, y) = kxy$, where k is a constant. The slopes of the streamline and the potential line passing through the point (1,1) are respectively

- (A) 1 and -1 (B) -1 and 1 (C) 1 and 1 (D) -1 and -1

- Q.13 The non-dimensional numbers shown in column 1 relate the inertial force with another force shown in column 2. Match the dimensionless number with the corresponding force.

Column 1

R: Reynolds number
F: Froude number
E: Euler number
W: Weber number

Column 2

P: Pressure
G: Gravity
S: Surface tension
V: Viscous

- (A) R-G, F-P, E-S, W-V
(C) R-G, F-V, E-S, W-P

- (B) R-V, F-G, E-S, W-P
(D) R-V, F-G, E-P, W-S

- Q.14 Consider the aerofoil of the dimensions shown. The lift coefficient C_L is measured to be 1.4 (based on the largest projected area). If air of density 1.2 kg/m^3 flows over the aerofoil at 50 m/s the lift force is:

- (A) 2.1 kN (B) 1.5 kN (C) 0.21 kN (D) 0.042 kN

- Q.15 A two-dimensional water jet hits a splitter plate as shown. The velocities at sections ①, ② and ③ may be taken as uniform and equal to V . The weight of the water and the friction along the plate may be neglected. For the data shown what is θ ?

- (A) 0 (B) $\tan^{-1}(0.5)$ (C) $\cos^{-1}(0.5)$ (D) $\sin^{-1}(0.5)$

- Q.16 Find the vertical hydrostatic force, f_z , on the surface P-Q due to the water in the tank. Note, f_z is the force per unit width along y . The surface P-Q is shaped like a quarter-cylinder of radius R . The atmospheric pressure is P_0 .

- (A) $\rho_w g(R^2 + \frac{\pi}{4}R^2)$ (B) $P_0 R + \rho_w g(R^2 + \frac{\pi}{4}R^2)$
 (C) $\rho_w g(\frac{\pi}{4}R^2)$ (D) $P_0 R + \rho_w g(\frac{\pi}{4}R^2)$
- Q.17 For a given location in a flow, the rate of change of density following a fluid particle $\left(\frac{D\rho}{Dt} = \frac{\partial\rho}{\partial t} + u\frac{\partial\rho}{\partial x} + v\frac{\partial\rho}{\partial y} + w\frac{\partial\rho}{\partial z}\right)$, is $2.4 \text{ kg}/(\text{m}^3\text{s})$. If the density at that point is $1.2 \text{ kg}/\text{m}^3$, then the divergence of the velocity field $(\nabla \cdot \vec{V})$ at that point is:
- (A) 0.5 s^{-1} (B) -0.5 s^{-1} (C) -2 s^{-1} (D) 2 s^{-1}
- Q.18 Water is flowing with volume flow rate Q through a pipe whose diameter reduces to half across a reducer. If the flow is frictionless, compare the manometer reading h_1, h_2 and h_3 corresponding to the three different inclinations of the pipe $\theta_1 = 30^\circ$, $\theta_2 = 0^\circ$ and $\theta_3 = -30^\circ$. Note that only the pipe tilts, while the manometer always stays vertical.

- (A) $h_1 > h_2 > h_3$ (B) $h_1 < h_2 < h_3$ (C) $h_1 = h_2 = h_3$ (D) $h_1 = h_3$ and $h_1 > h_2$
- Q.19 A 4 m wide canal is modelled using a 1 m wide dynamically similar model in the laboratory. A wooden block was observed to travel between two points in the model in 8 seconds. How long will it take to travel between the corresponding points in the actual canal?
- (A) 4 s (B) 8 s (C) 16 s (D) 32 s

- Q.20 Water (dynamic viscosity $\mu = 0.001 \text{ Ns/m}^2$) flows under pressure through a pipe of 1 cm diameter at a velocity of 1 cm/s. What would be the head loss per km length of the pipe?
 (A) 0.08 m (B) 0.16 m (C) 0.32 m (D) 1.28 m

- Q.21 Air with free stream velocity 10 m/s flows over three different bluff bodies P, Q and R as shown below, with a hemisphere of radius 1 m forming the nose.

Comparing the total drag force F on the three bodies, state which of the following is true.

- (A) $F_P > F_Q > F_R$ (B) $F_P = F_Q = F_R$ (C) $F_P < F_Q < F_R$ (D) $F_P = F_Q$ and $F_R > F_P$
- Q.22 A single engine jet aircraft is in a steady level flight at speed V_a with respect to ground. Assume that the engine intake area (A_m) is much larger than the engine exhaust area (A_e). If the density of the exhaust gas is ρ_e and the exhaust velocity relative to the aircraft is V_e , the thrust generated by the engine is
 (A) $\rho_e V_e^2 A_e$ (B) $\rho_e (V_a + V_e)^2 A_e$ (C) $\rho_e (V_a - V_e)^2 A_e$ (D) $\rho_e (V_a + V_e) V_e A_e$

- Q.23 Which of the following is a valid velocity field for an incompressible flow?

(A) $\vec{V} = (xy)\hat{i} - (xy)\hat{j}$ (B) $\vec{V} = (x^2y)\hat{i} - (xy^2)\hat{j}$
 (C) $\vec{V} = (xy^2)\hat{i} + (x^2y)\hat{j}$ (D) $\vec{V} = (x^2y^2)\hat{i} - (x^2y^2)\hat{j}$

- Q.24 A log is fully submerged horizontally in water. Consider four different orientations (cross-sections shown below) such that point 'O' lies at the same depth.

Which orientation(s) will give the maximum moment about point O?

- (A) P (B) Q (C) R (D) P and S

- Q.25 A closed cylindrical container of diameter D and length L is completely filled with a liquid of density ρ . The axis of the cylinder makes an angle θ with the vertical.

The total force on the curved surface is

- (A) $\frac{\pi D^2 L}{4} \rho g \sin \theta$ (B) $\frac{\pi D^2 L}{4} \rho g \cos \theta$
 (C) $\frac{3\pi D^2 L}{4} \rho g \sin \theta$ (D) $\frac{3\pi D^2 L}{4} \rho g \cos \theta$
- Q.26 Air flowing over a smooth cylinder of diameter 30 cm in a wind tunnel produces a two-dimensional laminar boundary layer that separates from the surface of the cylinder. The surface of the cylinder is then roughened with sand paper so that the boundary layer turns turbulent. The location of the point of separation will
- (A) shift upstream
 (B) shift downstream
 (C) not shift
 (D) shift upstream or downstream depending on the roughness height
- Q.27 The drag force on a ship travelling in sea depends on the viscous resistance as well as the effect of surface waves. A model with complete dynamic similarity is to be constructed in the laboratory using a fluid with a kinematic viscosity which is $1/64$ times that of seawater $\left(\frac{\nu_m}{\nu_p} = \frac{1}{64}\right)$. What should be the length ratio (l_m/l_p)? Note that the subscripts m and p refer to the model and the prototype respectively.
- (A) $1/64$ (B) $1/16$ (C) $1/8$ (D) 16
- Q.28 Air flows in a square duct of side 10 cm. At the entrance, the velocity is uniform at 10 m/s and the boundary layer thickness is negligible. At the exit, the displacement thickness is 5 mm (on each wall). The velocity outside the boundary layers at the exit is:
- (A) 12.35 m/s (B) 11.08 m/s (C) 10 m/s (D) 9 m/s

Common Data Questions

Common Data for Questions 29 and 30:

The Darcy-Weisbach equation for head loss through a pipe is given as $h_f = f \frac{L V^2}{D 2g}$. A reservoir, as shown in the figure, stores water to a height of 8 m. The entrance from the reservoir to the pipe (length 50 m, diameter 10 cm) is sharp, with a loss coefficient of 0.5, and the friction factor for the pipe is 0.017.

Q.29 What would be the discharge through the pipe?
 (A) 0.0314 m³/s (B) 0.0322 m³/s (C) 0.0331 m³/s (D) 0.0341 m³/s

Q.30 If it is desired to increase the discharge, the following four options are available:

1. Increase the pipe length, keeping everything else the same
2. Increase the pipe diameter, keeping everything else the same
3. Add a valve at the end of the pipe, keeping everything else the same
4. Replace the sharp entrance by a rounded entrance, keeping everything else the same

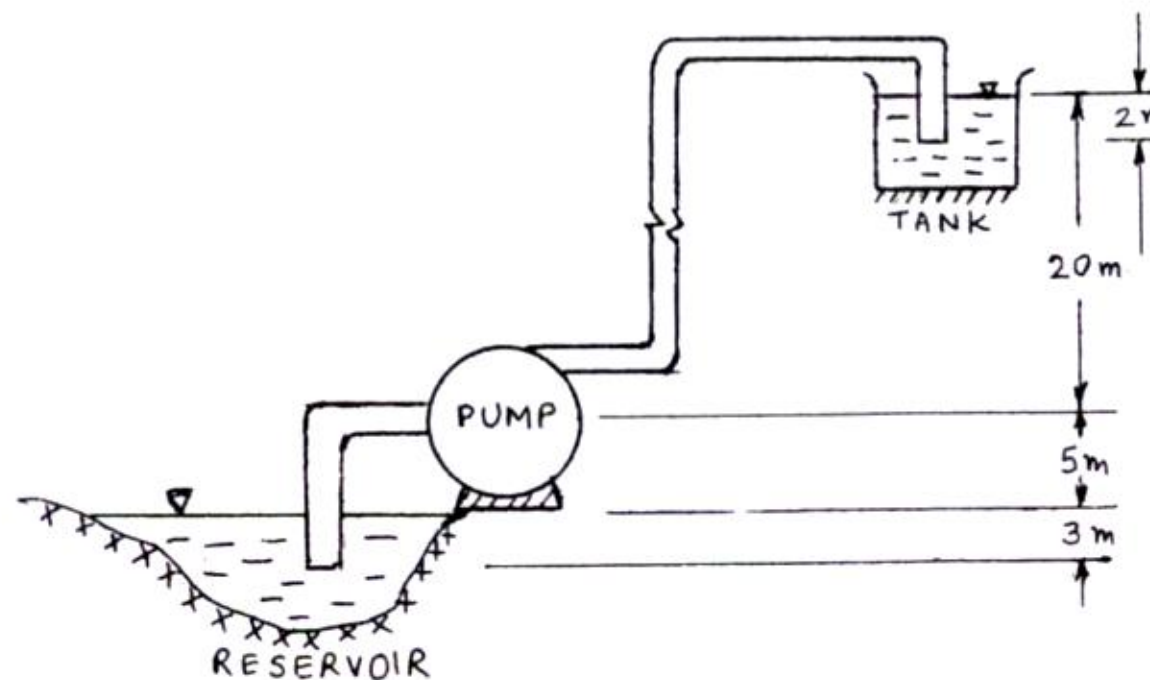

Only two of these options serve our purpose. Which are they?

- (A) 1, 2 (B) 1, 3 (C) 2, 4 (D) 3, 4

Linked Answer Questions: Q.31 to Q.34 carry two marks each.

Statement for Linked Answer Questions 31 and 32:

A pump draws water from a reservoir and discharges it to an overhead tank as shown. The area of the outlet pipe is 20 cm² and the average velocity in the outlet pipe is 3 m/s. Neglect the minor and major losses in the piping.

Q.31 The total head developed by the pump (in metres of water) is:
 (A) 27 m (B) 25 m (C) 24 m (D) 22 m

Q.32 If the combined efficiency of the pump and motor is 0.75, then the power required to run the pump is:

- (A) 1.76 kW (B) 1.92 kW (C) 2.00 kW (D) 2.16 kW

Statement for Linked Answer Questions 33 and 34:

The potential function for an ideal flow over a cylinder with rotation is given by

$$\phi(r, \theta) = Ur \cos \theta + \frac{\mu}{2\pi r} \cos \theta + \frac{\Gamma}{2\pi} \theta$$

The velocity components are related to the potential function as $u_r = \frac{\partial \phi}{\partial r}$ and $u_\theta = \frac{1}{r} \frac{\partial \phi}{\partial \theta}$.

Q.33 What is the radius of the cylinder?

- (A) $R = \sqrt{\frac{\mu}{2\pi U}}$ (B) $R = \sqrt{\frac{2\pi U}{\mu}}$ (C) $R = \sqrt{\frac{\mu}{\Gamma - 2\pi U}}$ (D) $R = \sqrt{\frac{\Gamma - 2\pi U}{\mu}}$

Q.34 Where are the stagnation points located?

- (A) $\theta = 0$ and $\theta = \pi$ (B) $\theta = \sin^{-1}\left(\frac{\Gamma}{4\pi UR}\right)$ and $\theta = \pi - \sin^{-1}\left(\frac{\Gamma}{4\pi UR}\right)$
 (C) $\theta = \frac{\pi}{2}$ and $\theta = -\frac{\pi}{2}$ (D) $\theta = \cos^{-1}\left(\frac{\Gamma}{4\pi UR}\right)$ and $\theta = 2\pi - \cos^{-1}\left(\frac{\Gamma}{4\pi UR}\right)$

Q. 1 – Q. 8 carry one mark each.

- Q.1 In the rocksalt-type structure, the large anions are arranged in a cubic close-packed manner. The cations occupy
- (A) all the octahedral interstitial sites
 (B) half of the octahedral interstitial sites and quarter of the tetrahedral interstitial sites
 (C) all the tetrahedral interstitial sites
 (D) 50% of the tetrahedral interstitial sites
- Q.2 Which of the following is **NOT** a Bravais lattice?
- (A) Body-centered tetragonal (B) Face-centered tetragonal
 (C) Body-centered orthorhombic (D) Face-centered orthorhombic
- Q.3 The characteristic diffusion distance in a material with diffusivity "D" in time "t" is proportional to
- (A) $Dt^{1/2}$ (B) $D^{1/2}t$ (C) $D^{1/2}t^{1/2}$ (D) Dt
- Q.4 At constant pressure, the maximum degrees of freedom in a binary phase diagram are
- (A) 0 (B) 1 (C) 2 (D) 3
- Q.5 When the particle size decreases, the surface-to-volume ratio
- (A) increases (B) decreases
 (C) remains constant (D) is material-dependent
- Q.6 A material in the superconducting state is
- (A) paramagnetic (B) diamagnetic (C) ferromagnetic (D) antiferromagnetic
- Q.7 Toughness is a measure of
- (A) the stress required to fracture a material
 (B) the strain required to fracture a material
 (C) the energy required to fracture a material
 (D) the energy required to plastically deform a material

- Q.8 Metals, because of their many available empty electron states, will absorb
- (A) X- and γ -ray radiation
 - (B) visible light of all frequencies
 - (C) ultra-violet (UV) light
 - (D) all the frequencies greater than that of UV light

Q. 9 to Q.30 carry two marks each.

- (D) P-3, Q-5, R-1, S-4

- Q.12 The average degree of polymerization of Polypropylene associated with an average molecular weight of 36000 amu is (atomic masses of C and H are 12 and 1 amu, respectively)
- (A) 1286
 - (B) 857
 - (C) 360
 - (D) 346
- Q.13 In an alloy system, X-Y, three phases α (10), γ (21), and Liq. (45) are in equilibrium at 700°C and γ (21), Liq. (68) and β (89) are in equilibrium at 420°C . (numbers in the brackets are compositions of the phase in wt% of X). Choose the **INCORRECT** statement:
- (A) γ is an intermetallic compound
 - (B) Equilibrium at 700°C is peritectic
 - (C) Equilibrium at 420°C is eutectic
 - (D) Equilibrium at 420°C is eutectoid
- Q.14 Which one of the following may **NOT** help in resisting the weld decay or intergranular corrosion in austenitic stainless steel?
- (A) Heating the stainless steel to 1000°C followed by quenching to room temperature
 - (B) Heating the stainless steel to 1000°C followed by furnace cooling
 - (C) Lowering the carbon content to 0.03 wt. % in the stainless steel
 - (D) Alloying the stainless steel with Nb or Ti
- Q.15 A badminton racquet stem is designed to have a Young's modulus of 230 GPa. The stem is made up of long, oriented carbon fibres parallel to the stem axis in an epoxy matrix. The Young's moduli of carbon fibre and epoxy are 400 GPa and 3 GPa respectively. The volume fraction of the fiber in the composite should be
- (A) 0.006
 - (B) 0.428
 - (C) 0.572
 - (D) 0.994

Q.16 Match the material (Group I) with its most well known application (Group II).

Group I (Material)

- P) Graphite
Q) Cermet
R) PbS
S) Quartz

Group II (Application)

- 1) Lubricant
2) Cutting tools
3) Infrared detector
4) Crystal oscillator
5) Red LED

- (A) P-1, Q-2, R-3, S-4
(C) P-5, Q-1, R-2, S-3

- (B) P-3, Q-1, R-2, S-4
(D) P-2, Q-5, R-1, S-4

Q.17 At constant volume, the energy required to raise the temperature of 1 g of a monatomic solid (atomic mass: 24 amu) by 1°C at $T \gg \theta_{\text{Debye}}$ is

- (A) 0.20 cal (B) 0.25 cal (C) 0.30 cal (D) 0.35 cal

Q.18 For a hard magnet, the remnant induction (B_r) is 0.5 Tesla and the coercive field (H_c) is $4 \times 10^4 \text{ A.m}^{-1}$. The energy loss of the magnet per cycle is

- (A) 2 kJ.m^{-3} (B) 20 kJ.m^{-3} (C) 40 kJ.m^{-3} (D) 80 kJ.m^{-3}

Q.19 A 1 mm thick sheet of a material having a relative dielectric constant of 4 is subjected to a static voltage of 100 V. The polarization induced in the sheet is

- (A) $3 \times 10^{-6} \text{ C.m}^{-2}$ (B) $2.7 \times 10^{-6} \text{ C.m}^{-2}$ (C) $4.2 \times 10^{-7} \text{ C.m}^{-2}$ (D) $6.8 \times 10^{-8} \text{ C.m}^{-2}$

Q.20 The refractive index of a window glass is 1.5 in the range of visible wavelengths of light. The value of the reflectivity is

- (A) 0.01 (B) 2 (C) 0.04 (D) 5

Q.21 In BaTiO_3 , the presence of spontaneous polarization is as a result of the

- (A) relative displacements of the Ti^{4+} and O^{2-} ions from their symmetrical positions
(B) displacement of only cations from their symmetrical positions
(C) relative displacements of Ba^{2+} and O^{2-} ions from their symmetrical positions
(D) displacement of only O^{2-} ions from their symmetrical positions

Q.22 What is the yield strength of a material with a grain size of $10 \mu\text{m}$? The yield strength of a single crystal of this material is 80 MPa and its Hall-Petch constant is $0.6 \text{ MN.m}^{-3/2}$.

- (A) 80 MPa (B) 86 MPa (C) 140 MPa (D) 270 MPa

Q.23 The amount of sulphur (S) required for 5% cross linking in 100 kg of Polyisoprene is (atomic masses of H, C, and S are 1, 12, and 32 amu, respectively)

- (A) 23.5 g (B) 47 g (C) 2.35 kg (D) 16 kg

Q.24 Match the type of laser (Group I) with its lasing medium (Group II).

Group I (Laser)

- P) CO_2
Q) Ruby
R) Dye
S) HeCd

Group II (Lasing Medium)

- 1) Gas
2) Metal vapor
3) Liquid
4) Solid
5) Gas-ions

- (A) P-1, Q-4, R-3, S-2
(C) P-2, Q-4, R-5, S-4

- (B) P-1, Q-2, R-3, S-4
(D) P-5, Q-4, R-3, S-4

- Q.25 Which of the following is the direction common to $(\bar{1}11)$ and (111) planes?
 (A) $[011]$ (B) $[21\bar{1}]$ (C) $[0\bar{1}1]$ (D) $[001]$
- Q.26 The net magnetic moment of iron (Fe) is $2.22 \mu_B$ per atom. Calculate the saturation flux density in iron. (Density of iron : 7.87 g.cm^{-3} ; Atomic mass of iron : 56 amu)
 (A) 2.18×10^{-6} Tesla (B) 2.18×10^{-12} Tesla (C) 2.18×10^{-9} Tesla (D) 2.18 Tesla

Common Data Questions

Common Data for Questions 27 and 28:

A hypothetical load elongation curve for a 13 mm diameter tensile specimen with 50 mm gauge length is as shown in the diagram below.

- Q.27 The Young's modulus is
 (A) 101 GPa (B) 148 GPa (C) 201 GPa (D) 301 GPa
- Q.28 The ultimate tensile strength of the material is
 (A) 207 MPa (B) 247 MPa (C) 222 MPa (D) 267 MPa

Common Data for Questions 29 and 30:

A cylindrical well annealed copper (Cu) specimen having a cross-sectional area of $5 \times 10^{-6} \text{ m}^2$ and length of 1m has a dislocation density of 10^9 m^{-2} and grain diameter of $40 \mu\text{m}$. This specimen is reduced to a cross-section of $1 \times 10^{-6} \text{ m}^2$ by passing through a die and in the process, its dislocation density increased to 10^{13} m^{-2} . Subsequently the wire is annealed at 450°C and the just-recrystallized wire has a grain diameter of $10 \mu\text{m}$. If it is kept at 450°C for a longer duration, grain growth would occur. (Shear modulus of Cu: 44 GPa; Atomic diameter of Cu: 2.56 \AA ; Specific grain boundary energy of Cu : 0.5 J.m^{-2})

- Q.29 What is the strain energy stored in the just-deformed copper specimen?
 (A) 72 J (B) 36 J (C) 72 mJ (D) 36 mJ
- Q.30 What is the driving force for grain growth (stored grain boundary energy) just after recrystallization at 450°C in the given specimen?
 (A) 375 mJ (B) 750 mJ (C) 1.5 J (D) 3.0 J

Linked Answer Questions: Q.31 to Q.34 (carry two marks each)**Statement for Linked Answer Questions 31 and 32:**

For a semiconductor, the electron and hole mobilities are $\mu_e=0.364 \text{ m}^2.\text{V}^{-1}.\text{s}^{-1}$, $\mu_h=0.19 \text{ m}^2.\text{V}^{-1}.\text{s}^{-1}$, and the intrinsic carrier concentrations are $n_e=n_h=2.3 \times 10^{19} \text{ m}^{-3}$ at 300 K.

- Q.31 The electrical conductivity of the semiconductor at 300 K is
(A) $2.04 \Omega^{-1}\text{m}^{-1}$ (B) $1.34 \Omega^{-1}\text{m}^{-1}$ (C) $0.70 \Omega^{-1}\text{m}^{-1}$ (D) $2.74 \Omega^{-1}\text{m}^{-1}$
- Q.32 Upon increasing the temperature to 373 K, the electrical conductivity increases to $25.75 \Omega^{-1}\text{m}^{-1}$. The bandgap of the semiconductor is
(A) 1.43 eV (B) 1.11 eV (C) 0.67 eV (D) 0.33 eV

Statement for Linked Answer Questions 33 and 34:

The X-ray powder diffraction pattern of a well annealed cubic material (lattice parameter, $a = 4.2 \text{ \AA}$) is taken using CuK_α radiation ($\lambda=1.54 \text{ \AA}$).

- Q.33 The Bragg angle (θ_B) for the (111) peak occurs at
(A) 18.55° (B) 10.56° (C) 15.02° (D) 33.37°
- Q.34 If the full width at half maximum (FWHM) of the above peak is 0.4° . Ignoring the instrumental broadening, the crystallite size of the material is
(A) 20.2 nm (B) 20.5 nm (C) 20.9 nm (D) 23.7 nm

END OF SECTION - E

F : SOLID MECHANICS**Q. 1 – Q. 8 carry one mark each.**

- Q.1 Which of the following is true?
 (A) In the plane of maximum shear, normal stress is always zero.
 (B) In the plane of maximum shear, normal stress may not be always zero.
 (C) In a principal plane, shear stress is never zero.
 (D) In a principal plane, normal stress is always zero.
- Q.2 State of stress at a point in a loaded body is given by $\sigma_x=10$ MPa, $\sigma_y= 0$, $\sigma_z = -5$ MPa and $\tau_{xy}=\tau_{yz}=\tau_{zx}= 0$. Maximum shear stress at that point is
 (A) 5 MPa (B) 2.5 MPa (C) 7.5 MPa (D) 0
- Q.3 State of stress at a point of a body in a plane stress problem is given by $\sigma_x = -6$ MPa, $\sigma_y = 2$ MPa and $\tau_{xy} = 4$ MPa. Which of the following is true at that point?
 (A) There exists at least one plane where normal stress is zero.
 (B) There exists no plane where normal stress is zero.
 (C) There exists no plane where shear stress is zero.
 (D) In the plane of maximum shear, normal stress is zero.
- Q.4 To an observer standing on the ground the velocity of a cyclist is 12 m/s in the horizontal direction and that of rain drops falling vertically down is 6 m/s. The magnitude of the velocity of the rain drops relative to the cyclist is
 (A) 6 m/s (B) 12 m/s (C) 13.4 m/s (D) 18.4 m/s
- Q.5 If a mass attached to the free end of a linear spring is so constrained that it executes vertical undamped oscillations, its acceleration at the instant when it occupies the static equilibrium position is
 (A) vertically upward (B) vertically downward
 (C) the maximum (D) zero
- Q.6 If three nonparallel forces are in equilibrium they
 (A) must be concurrent but need not be coplanar
 (B) must be coplanar but need not be concurrent
 (C) must be both concurrent and coplanar
 (D) need not have zero as the geometric sum of the force vectors
- Q.7 A point of contraflexure in a loaded beam is one where
 (A) shear force is maximum. (B) shear force and bending moment are maximum.
 (C) bending moment is maximum. (D) bending moment is zero.
- Q.8 In a beam of uniform strength, the extreme fibers at every cross section are stressed to the maximum allowable stress. Consider a solid circular beam of uniform strength subjected to bending moment. In this beam, the diameter of the cross-section at any section is proportional
 (A) to cube root of the bending moment at that section.
 (B) to the square root of the bending moment at that section.
 (C) to the bending moment at that section.
 (D) inversely to the bending moment at that section.

Q. 9 to Q.30 carry two marks each.

- Q.9 For a loaded body representing a two dimensional plane problem, the displacement components along x and y at any point (x,y) are $u = x^2 + y^2$, $v = 2y$ respectively. Principal strains at the point $(3, 1)$ in the body are
- (A) $\varepsilon_1 = 8, \varepsilon_2 = 2$ (B) $\varepsilon_1 = 6.24, \varepsilon_2 = 1.76$
 (C) $\varepsilon_1 = 0, \varepsilon_2 = 3$ (D) $\varepsilon_1 = 5, \varepsilon_2 = -3$.
- Q.10 A 9 kN tensile load will be applied to a 50 m length steel wire with $E = 200$ GPa. The normal stress in the wire must not exceed 150 MPa and the increase in the length of the wire should be at most 25 mm. Which among these could be the smallest diameter of the wire so that the wire does not fail?
- (A) 5.75 mm (B) 7.75 mm (C) 8.75 mm (D) 10.7 mm
- Q.11 A uniform circular cross section rod made of a brittle material is subjected to a pure torsion. If d is the diameter of the cross section of the rod and σ_{all} is the maximum allowable normal stress for the material of the rod, then the maximum twisting moment that can be applied to the rod without failure is
- (A) $\frac{\sigma_{all}}{16} \pi d^3$ (B) $\frac{\sigma_{all}}{32} \pi d^3$
 (C) $\frac{\sigma_{all}}{8} \pi d^3$ (D) $\frac{\sigma_{all}}{64} \pi d^3$
- Q.12 A thin walled spherical pressure vessel of mean radius 1000 mm, having a wall thickness of 10 mm is subjected to an internal pressure of 0.8 MPa. The maximum shear stress developed in the wall will be
- (A) 0 (B) 20 MPa (C) 40 MPa (D) 80 MPa
- Q.13 A rectangular cross section beam of width $w = 0.25$ m and depth $d = 0.4$ m is subjected to a bending moment $M = 200$ N-m and a uniform axial load of $P = 200$ N as shown. Measured from the centroidal axis of the beam, normal stress will be zero at a distance of

- (A) $y = 15$ mm (B) $y = -13.3$ mm (C) $y = -15$ mm (D) $y = 10$ mm

- Q.14 Three masses M , $2M$ and $3M$ are attached by circular cross section wires and are rotated around a vertical axis on a frictionless plane at 4 Hz as shown in the figure. Consider the masses to be concentrated as points. For equal stresses in wires in all the three segments, the cross sectional areas of the wires in the three segments 1, 2 and 3 should be in the ratio

- (A) 1:2:3 (B) 3:2:1 (C) 9:4:1 (D) 14:13:9
- Q.15 Two steel plates of uniform cross section 10 mm x 80 mm are welded together and subjected to an axial load of $P=100$ kN as shown in the figure. Allowable normal stress (tension and compression) and allowable shear stress for the material of the weld are 100 MPa and 50 MPa respectively and $\beta=25^\circ$. Which of the following is true?

- (A) The joint will fail due to normal tensile stress.
 (B) The joint will fail due to normal compressive stress.
 (C) The joint will fail due to shear stress.
 (D) The joint will not fail.
- Q.16 A plane cantilever truss is loaded as shown in the figure. If a positive sign denotes tension and a negative sign compression, the axial force in the member 1 is

- (A) $-5.33P$ (B) $-1.67P$ (C) $+2P$ (D) $+3P$

- Q.17 A man weighing 600N stands on a horizontal beam of negligible weight at C and holds a string passing over two smooth pulleys and attached to point B on the beam as shown in the figure. The tension in the string is

- (A) 100 N (B) 400 N (C) 600 N (D) 1200 N

- Q.18 A homogeneous cubic block of side L and weight 200 N resting on a horizontal floor is acted upon by a force of 100 N at an angle of 60° to the horizontal as shown in the figure. If the coefficient of friction is 0.3, the magnitude of the frictional force between the block and the floor is

- (A) 0 N (B) 50 N (C) 86 N (D) 100 N

- Q.19 A ball is thrown vertically upwards with a velocity of 10 m/s from a height of 40 m from the ground. If the air resistance is neglected and $g = 9.8 \text{ m/s}^2$, the time taken by the ball to reach the ground is

- (A) 2.01 s (B) 2.53 s (C) 2.86 s (D) 4.05 s

- Q.20 When a ball of weight W rests on a spring of constant k , it produces a static deflection of 3 cm. If the ball is now dropped from a height of $h = 30$ cm as shown in the figure, the spring will get compressed by

- (A) 2.45 cm (B) 14.07 cm (C) 16.75 cm (D) 33 cm
- Q.21 A bullet of mass $m_1 = 20$ gm fired horizontally with a velocity of $v = 200$ m/s hits a wooden block of mass $m_2 = 500$ gm (take $g = 9.8$ m/s²) resting on a horizontal plane as shown in the figure and the bullet remains embedded in the block after the impact. If the coefficient of friction between the surfaces in contact remains constant at 0.3, the distance the block will move before coming to rest is

- (A) 5.03 m (B) 10.06 m (C) 20.12 m (D) 100 m
- Q.22 A block of weight 500 N is about to move up the plane due to a horizontal force of 800 N. The coefficient of static friction between the contact surfaces is

- (A) 0.15 (B) 0.25 (C) 0.33 (D) 0.53

- Q.23 The horizontal displacement at D of the frame shown in figure is (neglect axial strain energy and assume EI to be constant throughout)

- (A) $\frac{6P}{EI}$ (B) $\frac{9P}{EI}$ (C) $\frac{45P}{EI}$ (D) $\frac{729P}{EI}$

- Q.24 The forces in the members of a truss ABCD as shown in the figure are (T stands for tension and C for compression)

- (A) $F_{AB} = 12 \text{ kN(T)}$, $F_{CD} = 12 \text{ kN(C)}$, $F_{AD} = 9 \text{ kN(T)}$, $F_{BC} = 9 \text{ kN(T)}$, $F_{AC} = 0$
 (B) $F_{BC} = 0$; $F_{AC} = 15 \text{ kN(T)}$; $F_{CD} = 12 \text{ kN(C)}$; $F_{AD} = 9 \text{ kN(T)}$; $F_{AB} = 12 \text{ kN(T)}$
 (C) $F_{BC} = 0$; $F_{AD} = 0$; $F_{AC} = 15 \text{ kN(T)}$; $F_{CD} = 12 \text{ kN(C)}$; $F_{AB} = 12 \text{ kN(C)}$
 (D) $F_{AB} = F_{BC} = F_{AD} = 0$; $F_{AC} = 15 \text{ kN(T)}$; $F_{CD} = 12 \text{ kN(C)}$

- Q.25 The axial force, shear force and bending moment at section A-A of beam shown in figure are respectively

- (A) -400 N, 150 N, 600 N.m
 (B) 400 N, 0 N, 600 N.m
 (C) 0, 250 N, 1000 N.m
 (D) -400 N, 310 N, 1240 N.m
- Q.26 The slope and deflection at the free end of a variable cross section cantilever beam subjected to a bending moment at the free end as shown in the figure is

- (A) $\frac{2ML}{3EI}, \frac{5ML^2}{18EI}$ (B) $\frac{ML}{EI}, \frac{ML^2}{2EI}$ (C) $\frac{ML}{1.5EI}, \frac{ML^2}{3EI}$ (D) $\frac{ML}{3EI}, \frac{ML^2}{3EI}$
- Q.27 The maximum compressive load that can be applied on a hinged-hinged column of cross-section 20mm x 10mm and length 2000 mm is (allowable compressive stress = 250 MPa; $E = 210$ GPa)
- (A) 0.86 kN (B) 3.45 kN (C) 25 kN (D) 50 kN
- Q.28 A lift originally moving downwards at 10 m/s is brought to rest with a constant retardation in a distance of 25m. The force with which the feet of a passenger of mass 80 kg (take $g = 9.8$ m/s²) press downwards on the floor of the lift is
- (A) 160 N (B) 784 N (C) 944 N (D) 1000 N

Common Data Questions

Common Data for Questions 29 and 30:

Two wires are connected to a rigid bar as shown in the figure. The wire on the left is made of steel having an area of cross section $A = 60 \text{ mm}^2$ and $E = 210 \text{ GPa}$. The aluminum wire on the right has $A = 120 \text{ mm}^2$ and $E = 70 \text{ GPa}$. The weight $W = 100 \text{ kN}$ is placed as shown

- Q.29 Due to this loading, the vertical displacement of the rigid bar at the mid span under the load is
 (A) 0.45 mm (B) 0.6 mm (C) 1.04 mm (D) 1.49 mm
- Q.30 At what distance the weight W should be placed from the left wire so that the bar will remain horizontal
 (A) 100 mm (B) 200 mm (C) 350 mm (D) 500 mm

Linked Answer Questions: Q.31 to Q.34 carry two marks each.

Statement for Linked Answer Questions 31 and 32:

One end of a linear spring is attached to a fixed support and a mass of 2 kg hangs from it at the other end. A force of 4 N causes a displacement of 0.02 m. The mass is pulled down a distance of 0.04 m from its static equilibrium position and released with zero velocity

- Q.31 The natural frequency of vibration is
 (A) 1 rad/s (B) 1.59 rad/s (C) 5 rad/s (D) 10 rad/s
- Q.32 The magnitude of velocity when the body has moved half way towards the static equilibrium position from its initial position is
 (A) 0.212 m/s (B) 0.346 m/s (C) 0.4 m/s (D) 1.0 m/s

Statement for Linked Answer Questions 33 and 34:

A two span variable cross section simply supported beam ABC is carrying two concentrated loads as shown in the figure.

- Q.33 The support moment at B (M_B) is
 (A) -7.5 kN.m (B) 0 kN.m (C) 20 kN.m (D) 80 kN.m
- Q.34 The support reactions are
 (A) $R_A = R_C = 3.125$ kN, $R_B = 13.75$ kN. (B) $R_A = R_C = R_B = 6.67$ kN
 (C) $R_A = R_C = 5$ kN, $R_B = 10$ kN. (D) $R_A = R_C = 10$ kN, $R_B = 0$.

END OF SECTION - F

G: THERMODYNAMICS

Q. 1 – Q. 8 carry one mark each.

- Q.1 Experimental data obtained from a constant-volume-gas-thermometer is shown in the figure below. The value of I in $^{\circ}\text{C}$ is

- (A) 273.15 (B) 1.0 (C) -100 (D) -273.15
- Q.2 At constant temperature, pressure of an incompressible fluid is changed from 400 kPa to 4 MPa. Which of the following set of thermodynamic properties remain unchanged during the process: (u is specific internal energy, v is specific volume, h is specific enthalpy and s is specific entropy)
- (A) u, v, h (B) u, s, h (C) u, v, s (D) v, s, h
- Q.3 The densities of water and ice at 0°C are 1000 kg/m^3 and 900 kg/m^3 , respectively. If ice at 0°C is allowed to melt into water at the same temperature, then
- (A) work is done by ice on the surrounding atmosphere.
 (B) work is done by the atmosphere on ice.
 (C) there is no work interaction.
 (D) nothing can be said about the work interaction.
- Q.4 The work done in an isentropic process involving ideal gas is equal to
- (A) $-\int VdP$ (B) Zero
 (C) $\frac{P_1V_1 - P_2V_2}{\gamma - 1}$ (D) $RT \ln\left(\frac{V_2}{V_1}\right)$
- Q.5 Thermal efficiency of a Diesel cycle can be increased by
- (A) increasing both compression ratio and cut-off ratio.
 (B) decreasing both compression ratio and cut-off ratio.
 (C) decreasing compression ratio and increasing cut-off ratio.
 (D) increasing compression ratio and decreasing cut-off ratio.
- Q.6 In a throttling process
- (A) temperature always remains unchanged.
 (B) temperature always increases.
 (C) temperature always decreases.
 (D) temperature may increase, decrease or remain unchanged.
- Q.7 The COP of a Carnot heat pump operating between -3°C and 27°C is
- (A) 10 (B) 0.1 (C) 9.0 (D) 1.0

- Q.8 If the moist air is heated at a constant pressure
- (A) the specific humidity changes. (B) the relative humidity does not change.
 (C) the relative humidity decreases. (D) the relative humidity increases.

Q. 9 to Q. 30 carry two marks each.

- Q.9 Three thermodynamic quantities X , Y and Z satisfy the relation $dZ = XdY + YdX$. This implies,
- (A) quantity Z is a thermodynamic property.
 (B) quantities X & Y are thermodynamic properties.
 (C) all three quantities are thermodynamic properties.
 (D) none of the quantities are thermodynamic property.
- Q.10 In a constant temperature process 70 moles of an ideal gas at temperature 354 K attains a final volume $V_2 = 1 \text{ m}^3$. Work input during this process is 206 kJ. Initial volume V_1 of the gas approximately satisfies the following relation (e is the base of natural logarithm)
- (A) $V_1 = V_2$ (B) $V_1 = eV_2$ (C) $\ln(V_2/V_1) = 1$ (D) $V_1 = \ln(V_2)$
- Q.11 An ideal gas at pressure P_0 and temperature T_0 undergoes a reversible isothermal compression and attains a pressure P_1 . The characteristic gas constant is R . Net heat transferred during this process is
- (A) zero (B) $RT_0 \ln(P_1/P_0)$ (C) $-RT_0 \ln(P_1/P_0)$ (D) $RT_0(P_0 - P_1)/P_0$
- Q.12 A person starts a 60 W table fan in an insulated room of volume 86.4 m^3 . The person expects to cool the room from 32°C (pressure = 100 kPa) and allows the fan to rotate for 4 hours. If the specific heat at constant volume of the room air is 0.718 kJ/kg K and characteristic gas constant is 287 kJ/kg K , after 4 hours, the person will find that the room is
- (A) hotter by approximately 12°C .
 (B) cooler by approximately 10°C .
 (C) at the same temperature.
 (D) hotter by approximately 8°C .
- Q.13 Consider the cycles given below and state which one of the following statements is true

- (A) In both (a) and (b) net work done is +12 units.
 (B) In (b) net work done is more since in (a) no work is produced by the constant volume process.
 (C) Magnitudes of net work produced in both (a) and (b) are 12 units but their signs are opposite.
 (D) Magnitudes of net work produced in both (a) and (b) are different.

- Q.14 Steam of quality 0.98 is present in two separate containers A and B at 300 kPa and 200 kPa, respectively. Specific volumes of steam in containers A and B initially are v_{A1} and v_{B1} , respectively. Steam condenses at a constant pressure in such a way that the final quality of steam in both the containers is 0.01 and specific volumes of steam in containers A and B are v_{A2} and v_{B2} , respectively. Which one of the following statements is true?
- (A) $v_{A1} > v_{B1}$ & $v_{A2} > v_{B2}$
 (B) $v_{A1} < v_{B1}$ & $v_{A2} < v_{B2}$
 (C) $v_{A1} > v_{B1}$ & $v_{A2} < v_{B2}$
 (D) $v_{A1} < v_{B1}$ & $v_{A2} > v_{B2}$
- Q.15 The approximate entropy change, when 10 kg of an ideal gas having specific heat at constant volume $c_v = \frac{5R}{2}$ (given, $R=287$ J/ kg K) is taken from an initial state of 100 kPa and 300 K to the final state of 200 kPa and 500 K, is
- (A) 9.1 (B) 3.14 (C) 91.0 (D) 0.314
- Q.16 In a thermal power plant operating on a Rankine cycle, steam having enthalpy $h = 2995.1$ kJ/ kg and entropy $s = 6.5422$ kJ/ kg $^{\circ}\text{C}$ is produced at 3 MPa and 300 $^{\circ}\text{C}$ and is fed to a turbine where it expands to a condenser pressure of 5 kPa, where $h_f = 137.77$ kJ/ kg, $h_g = 2561.6$ kJ/ kg, $s_f = 0.4763$ kJ/ kg $^{\circ}\text{C}$ and $s_g = 8.3960$ kJ/ kg $^{\circ}\text{C}$. At the entrance to the condenser, the quality and enthalpy of steam, respectively are approximately:
- (A) 0.89, 1994.42 (B) 0.68, 1795.67 (C) 0.79, 2055.02 (D) 0.77, 2004.12
- Q.17 For a refrigerant, the slope $\left(\frac{dP}{dT}\right)_{sat}$ of the saturation curve on a P-T diagram is a function of the temperature, the enthalpy of vaporization and the difference between specific volumes of the saturated liquid and saturated vapor. If at 20 $^{\circ}\text{C}$, for the refrigerant, $\left(\frac{dP}{dT}\right)_{sat} = 17.69$ kPa/K, $v_f = 0.0008157$ m³/ kg and $v_g = 0.0358$ m³/ kg, the enthalpy of vaporization in kJ/ kg at 20 $^{\circ}\text{C}$ is approximately:
- (A) 12.38 (B) 273.77 (C) 353.8 (D) 181.5
- Q.18 Which one of the following relations is wrong:
- (A) $\left(\frac{\partial T}{\partial v}\right)_s = \left(\frac{\partial P}{\partial s}\right)_v$ (B) $\left(\frac{\partial T}{\partial P}\right)_s = \left(\frac{\partial v}{\partial s}\right)_P$
 (C) $\left(\frac{\partial P}{\partial T}\right)_v = \left(\frac{\partial s}{\partial v}\right)_T$ (D) $\left(\frac{\partial s}{\partial P}\right)_T = -\left(\frac{\partial v}{\partial T}\right)_P$

- Q.19 For the same maximum temperature and pressure, an Otto cycle and a Diesel cycle are shown on the same T-s diagram in the following figure. Which one of the following is correct:

- (A) 1-2-3-4 is an Otto cycle and 2-3 is an isobaric process.
 (B) 1-2'-3-4 is an Otto cycle and 2'-3 is an isobaric process.
 (C) 1-2-3-4 is an Otto cycle and 2-3 is an isochoric process.
 (D) 1-2'-3-4 is a Diesel cycle and 2'-3 is an isochoric process.
- Q.20 A Carnot engine having efficiency $\eta = 0.5$ drives a Carnot refrigerator with COP = 4. The energy absorbed by the refrigerator from the cold body for each kJ of energy absorbed from the source by the Carnot engine is
 (A) 2 kJ (B) 2.4 kJ (C) 3 kJ (D) 4 kJ
- Q.21 It is proposed that the solar energy be used to heat a large collector plate. The energy in turn be transferred as heat to a fluid within a heat engine, and the engine would reject energy as heat to the atmosphere. Experiments indicate that 0.5 kW/m^2 of energy can be collected at the operating temperature of the plate and the maximum efficiency of the engine is 0.2. The minimum collector area that would be required for a plant to produce 1 kW of useful shaft power is
 (A) 1 m^2 (B) 10 m^2 (C) 100 m^2 (D) 1000 m^2
- Q.22 A reversible engine operates between temperatures $T_1 = 1000 \text{ K}$ and $T_2 = 400 \text{ K}$. The engine drives a refrigerator which operates between $T_2 = 400 \text{ K}$ and $T_3 = 200 \text{ K}$. The energy transfer to the engine is 2000 kJ and the net work output of the combined engine and refrigerator is 300 kJ. The energy transferred to the refrigerant is
 (A) 9 kJ (B) 90 kJ (C) 900 kJ (D) 9000 kJ
- Q.23 Two kg of air at 500 kPa and 370 K expands adiabatically in a closed system until its volume is doubled and its pressure and temperature become equal to that of the surroundings, which is at 100 kPa and 300 K. If for air, $C_v = 0.7 \text{ kJ/kg K}$ and the characteristic gas constant $R = 0.287 \text{ kJ/kg K}$, the maximum work for this process is approximately given by
 (A) 105 kJ (B) 205 kJ (C) 305 kJ (D) 405 kJ
- Q.24 A reversible heat engine in a satellite operates between a hot reservoir at temperature T_1 and a radiating panel at temperature T_2 . Radiation from the panel is proportional to the area A and T^4 . The constant of proportionality is the Stefan-Boltzmann constant σ . The ratio of the work output W to the temperature difference $(T_1 - T_2)$ is
 (A) σAT (B) σAT^2 (C) σAT_2^3 (D) σAT_2^4

- Q.25 Irreversibility of a given process in a system is equal to
- (A) product of temperature of the surroundings and net change in entropy in the universe and it represents loss in total work available from the system.
 (B) product of temperature of the surroundings and net change in entropy in the universe and it represents gain in total work available from the system.
 (C) product of temperature of the system and net change in entropy in the universe and it represents loss in total work available from the system.
 (D) product of temperature of the system and net change in entropy in the system and it represents loss in total work available from the system.
- Q.26 T_{\max} and T_{\min} represent the maximum and minimum temperatures respectively in a gas turbine working on a Brayton cycle. The optimum pressure ratio r_p which provides the maximum amount of work is given by
- (A) $r_p = \left(\frac{T_{\max}}{T_{\min}}\right)^{\frac{2\gamma-1}{\gamma}}$ (B) $r_p = \left(\frac{T_{\max}}{T_{\min}}\right)^{\frac{\gamma}{2\gamma-1}}$
 (C) $r_p = \left(\frac{T_{\min}}{T_{\max}}\right)^{\frac{\gamma}{2\gamma-1}}$ (D) $r_p = \left(\frac{T_{\min}}{T_{\max}}\right)^{\frac{2\gamma-1}{\gamma}}$
- Q.27 A heat engine operates between three reservoirs: R_1 at 550 K, R_2 at 450 K and R_3 at 350 K. For every cycle, the engine accepts 100 kJ from R_1 and rejects 60 kJ into R_2 and 30 kJ into R_3 . The engine efficiency is
- (A) 0.10 (B) 0.20 (C) 0.30 (D) can not be defined
- Q.28 Carbon tetrachloride boils at 76 °C at 101 kPa. The latent heat of vaporization of carbon tetrachloride is 195 kJ/kg and for this, the characteristic gas constant is 0.055 kJ/ kg K. The boiling point of carbon tetrachloride at 202 kPa is
- (A) 274.54 K (B) 374.54 K (C) 474.54 K (D) 574.54 K

Common Data Questions

Common Data for Questions 29 and 30:

Steam at 0.6181 MPa and 160 °C (saturated) enters a steady flow device with a velocity of 50 m/ s and enthalpy 2756.7 kJ/ kg. It leaves at a pressure of 0.1 MPa with a velocity of 600 m/ s and enthalpy h_e . The device is perfectly insulated and does not do any work on the surroundings. Neither does it receive any work input. Use the following data table:

Pressure P (bar)	Temperature (°C)	Specific enthalpy		Specific entropy	
		h_f (kJ/kg)	h_g (kJ/kg)	s_f (kJ/kg K)	s_g (kJ/kg K)
1.5	111.37	467.13	2693.4	1.4336	7.2234

- Q.29 The quality of the steam at the outlet of the device is
- (A) 0.548 (B) 0.648 (C) 0.748 (D) 0.948
- Q.30 The above mentioned device is a
- (A) turbine (B) compressor (C) nozzle (D) diffuser

Linked Answer Questions: Q.31 to Q.34 carry two marks each.

Statement for Linked Answer Questions 31 and 32:

A tank contains 9 kg of liquid water at an initial temperature T_0 °C. A coil removes heat at the rate of $\dot{Q} = k_1 T$ from the tank. A paddle wheel, by constantly stirring, maintains uniform temperature in the tank. The rate of work input through the paddle wheel is $\dot{W} = k_2 T$. Temperature, T is in degree centigrade and k_1 & k_2 are constants. (Note that the rate of change in internal energy inside the tank will be a balance of work and heat transfer rates.)

Q.31 Temperature of the tank will vary in such a way that

- (A) if $|k_2| > |k_1|$ temperature will decrease exponentially
- (B) if $|k_2| > |k_1|$ temperature will increase exponentially
- (C) if $|k_2| < |k_1|$ temperature will increase exponentially
- (D) if $|k_2| > |k_1|$ temperature will decrease linearly

Q.32 If $T_0 = 80$ °C, $|k_1| = 0.1$, $|k_2| = 0.01$ and specific heat of the liquid = 1.0, the temperature of the tank after 1 minute will be

- (A) 43.9 °C
- (B) 38.4 °C
- (C) 166.6 °C
- (D) 145.7 °C

Statement for Linked Answer Questions 33 and 34:

Air enters a gas turbine at 1.0135 MPa, 1000 K at the rate of 1 kg/ s and exits at 101.35 kPa and 600 K. Neglect the changes in potential energy and kinetic energy and assume that air is an ideal gas with $R = 0.287$ kJ/ kg K, $c_p = 1.005$ kJ/ kg K.

Q.33 The net power output of the gas turbine is

- (A) 102 kW
- (B) 200 kW
- (C) 301 kW
- (D) 402 kW

Q.34 If for the isentropic process $\frac{T_2}{T_1} = \left(\frac{P_2}{P_1}\right)^{\frac{\gamma-1}{\gamma}}$ and $\gamma = 1.4$, the isentropic efficiency of the turbine is

- (A) 63%
- (B) 73%
- (C) 83%
- (D) 93%

H : POLYMER SCIENCE AND ENGINEERING**Q. 1 – Q. 8 carry one mark each.**

- Q.1 Among the polymerization methods listed below, the one that is likely to give a polydispersity close to unity is
- (A) anionic polymerization (B) cationic polymerization
(C) condensation polymerization (D) radical polymerization
- Q.2 The end-groups in a polymer sample prepared by using ROOH/Fe²⁺ (where R = alkyl) as the initiator system is
- (A) Fe²⁺ (B) -OR (C) -OH (D) Fe³⁺
- Q.3 Most polymers exhibit Newtonian behaviour at
- (A) high temperature (B) low shear rate
(C) high molecular weight (D) low filler content
- Q.4 The shear rate of a typical injection molding process is
- (A) 1 s⁻¹ (B) 10 s⁻¹ (C) 100 s⁻¹ (D) 1000 s⁻¹
- Q.5 Which of the following monomers is used in the synthesis of poly(vinyl alcohol)
- (A) CH₃CH₂OH (B) CH₂=CH(OH)
(C) CH₂=CH-O-CO-CH₃ (D) CH₂=CH-CO₂H
- Q.6 The extension ratio of an elastomer deformed to 10 times is
- (A) 2 (B) 5 (C) 9 (D) 11
- Q.7 Most plausible value for the Gibb's free energy change for a miscible blend of two polymers is
- (A) +5 kJmol⁻¹ (B) +1 kJmol⁻¹ (C) 0 kJmol⁻¹ (D) -0.01 kJmol⁻¹
- Q.8 The glass transition temperature of raw natural rubber is
- (A) -70 °C (B) -10 °C (C) 0 °C (D) +30 °C

Q. 9 to Q.30 carry two marks each.

- Q.9 2,2'-azobisisobutyronitrile (AIBN) is an initiator used in the free radical polymerization of methyl methacrylate (MMA). When the concentration of AIBN is doubled maintaining MMA concentration unchanged, the rate of propagation
- (A) is doubled (B) increases by a factor of $\sqrt{2}$
(C) is reduced by half (D) decreases by a factor of $\sqrt{2}$
- Q.10 A polymer sample has 3 molecules with molecular weights 1×10^5 , 2×10^5 and 3×10^5 gmol⁻¹ respectively. The weight average molecular weight of the sample is
- (A) 2.99×10^5 gmol⁻¹ (B) 2.66×10^5 gmol⁻¹
(C) 2.33×10^5 gmol⁻¹ (D) 2.00×10^5 gmol⁻¹

Q.11 Which of the following reagents is capable of effecting Group Transfer polymerization with methacrylates?

(A)

(B)

(C)

(D)

Q.12 For the copolymerization of MMA with vinyl chloride, the monomer reactivity ratios were found to be 10 and 0.1 respectively. The resulting polymer is most likely to be

- (A) an alternating copolymer
 (B) an ideal copolymer
 (C) a block copolymer
 (D) a branched copolymer

Q.13 Match the characterization techniques listed in Group I with the applications listed in Group II and select the correct answer from (A), (B), (C) or (D)

Group I (Technique)

- P. X-ray Diffraction
 Q. Differential Thermal Analysis
 R. Infrared Spectroscopy
 S. Microscopy

Group II (Application)

1. Functional Groups
 2. Crystallinity
 3. Morphology
 4. Enthalpy
 5. Power Factor

(A) P-5, Q-4, R-3, S-2

(C) P-3, Q-2, R-4, S-5

(B) P-2, Q-3, R-1, S-5

(D) P-2, Q-4, R-1, S-3

Q.14 For a polymer, viscosity at 50 °C and at 80 °C was found to be 2.00 Pa s and 1.00 Pa s respectively. The value of viscosity at 60 °C is

- (A) 1.65 Pa. s (B) 1.55 Pa. s (C) 1.45 Pa. s (D) 1.35 Pa. s

Q.15 For a viscoelastic material behaving as Maxwell model, the modulus at its relaxation time under constant strain reduces to

- (A) 36.8 % of the initial value
 (B) 63.2 % of the initial value
 (C) 66.7 % of the initial value
 (D) 33.3 % of the initial value

Q.16 The capacity of an extruder can be maximized by a combination of

- (A) higher barrel diameter; higher screw diameter; higher helix angle; higher rpm
 (B) higher barrel diameter; higher screw diameter; higher helix angle; lower rpm
 (C) higher barrel diameter; higher screw diameter; lower helix angle; higher rpm
 (D) higher barrel diameter; lower screw diameter; higher helix angle; higher rpm

- Q.17 Match the raw materials in Group I with the polymer processing operation in Group II and select the correct answer from (A), (B), (C) or (D).

Group I (raw material)

- P. polyethylene granules
Q. polycarbonate granules
R. polystyrene sheet
S. plasticized poly(vinyl chloride)

Group II (processing operation)

1. Injection molding
2. Film extrusion
3. Calendering
4. Thermoforming
5. Rotational molding

- (A) P-1, Q-2, R-3, S-4
(C) P-2, Q-5, R-3, S-1

- (B) P-2, Q-1, R-4, S-3
(D) P-4, Q-3, R-2, S-5

- Q.18 The difference in the stress-strain curve for plastics, elastomer and metals can be represented by: (M = Modulus; ϵ = elongation at break)

- (A) $M_{\text{metal}} < M_{\text{plastic}} < M_{\text{elastomer}}$ and $\epsilon_{\text{metal}} > \epsilon_{\text{plastic}} > \epsilon_{\text{elastomer}}$
(B) $M_{\text{plastic}} < M_{\text{elastomer}} < M_{\text{metal}}$ and $\epsilon_{\text{plastic}} > \epsilon_{\text{elastomer}} > \epsilon_{\text{metal}}$
(C) $M_{\text{elastomer}} < M_{\text{plastic}} < M_{\text{metal}}$ and $\epsilon_{\text{elastomer}} > \epsilon_{\text{plastic}} > \epsilon_{\text{metal}}$
(D) $M_{\text{plastic}} < M_{\text{metal}} < M_{\text{elastomer}}$ and $\epsilon_{\text{plastic}} > \epsilon_{\text{metal}} > \epsilon_{\text{elastomer}}$

- Q.19 Match the following rubbers in Group I with their applications in Group II and select the correct answer from (A), (B), (C) or (D).

Group I (rubbers)

- P. Butyl rubber
Q. Fluorocarbon elastomer
R. Natural rubber
S. Nitrile rubber

Group II (applications)

1. Gaskets in chemical plants
2. Petrol hose
3. Hand gloves
4. Roofing membrane
5. Tire inner liner

- (A) P-5, Q-1, R-3, S-2
(C) P-2, Q-3, R-1, S-4

- (B) P-1, Q-3, R-2, S-5
(D) P-3, Q-5, R-1, S-4

- Q.20 A carbon fiber-epoxy bar of dimensions (0.5m x 0.04m x 0.04m) gave a breaking load of 784N in a three point bending test. The flexural strength of the material is

- (A) 15.8 MPa (B) 9.2 MPa (C) 0.3 GPa (D) 108.1 GPa

- Q.21 Match the polymers in Group I with their crystalline melting point (m. p.) in Group II and select the right answer from (A), (B), (C) or (D).

Group I (polymers)

- P. Nylon66
Q. PBT
R. PP
S. LDPE

Group II (m. p., °C)

1. 108
2. 320
3. 264
4. 165
5. 220

- (A) P-1, Q-3, R-5, S-2
(C) P-3, Q-5, R-4, S-1

- (B) P-3, Q-4, R-2, S-5
(D) P-5, Q-1, R-3, S-4

- Q.22 Match the additives listed in Group I below with their function listed in Group II and select the right answer from (A), (B), (C) or (D).

Group I (additives)

P. Sulfur
Q. Zinc oxide
R. Paraphenylene diamine
S. Dioctyl phthalate

Group II (function)

1. Age resistor
2. Accelerator activator
3. Vulcanizing agent
4. Plasticizer
5. Accelerator

(A) P-1, Q-3, R-4, S-5
(C) P-3, Q-1, R-5, S-4

(B) P-3, Q-2, R-1, S-4
(D) P-2, Q-4, R-5, S-1

- Q.23 Match the ingredients in Group I with their amount in parts by weight in Group II in a typical recipe and select the right answer from (A), (B), (C) or (D)

Group I (ingredients)

P. Polyvinylchloride
Q. Plasticizer
R. Stabilizer
S. Calcium stearate

Group II (parts by weight)

1. 0.5
2. 40
3. 3
4. 100

(A) P-1, Q-2, R-3, S-4
(C) P-2, Q-3, R-1, S-4

(B) P-4, Q-3, R-2, S-1
(D) P-4, Q-2, R-3, S-1

- Q.24 The heat flow across the thickness to the opposite surface of a plastic slab of dimensions 0.1m x 0.1m x 0.05m is 19W. If the temperature difference between the surface of the slab is 10K, the thermal conductivity of the material will be

(A) $0.3 \text{ WK}^{-1}\text{m}^{-1}$ (B) $35.1 \text{ WK}^{-1}\text{m}^{-1}$ (C) $2.1 \text{ WK}^{-1}\text{m}^{-1}$ (D) $9.5 \text{ WK}^{-1}\text{m}^{-1}$

- Q.25 A miscible polymer blend consisting of 60% of polymer X ($T_g = 208^\circ\text{C}$) and 40% of polymer Y ($T_g = 100^\circ\text{C}$) will show a glass transition temperature in the range of

(A) $100\text{-}120^\circ\text{C}$ (B) $145\text{-}165^\circ\text{C}$ (C) $200\text{-}220^\circ\text{C}$ (D) $250\text{-}270^\circ\text{C}$

- Q.26 Crystallinity of the three different types of polyethylene (PE) follows the order

(A) HDPE > LLDPE > LDPE (B) LDPE > HDPE > LLDPE
(C) HDPE > LDPE > LLDPE (D) LLDPE > HDPE > LDPE

- Q.27 The notched Izod impact strength of acrylonitrile-butadiene-styrene polymer (ABS), polypropylene (PP), polycarbonate (PC) and phenol-formaldehyde (PF) resin follows the order

(A) PC < ABS < PP < PF (B) ABS < PF < PC < PP
(C) PP < PC < ABS < PF (D) PF < PP < ABS < PC

- Q.28 The properties of three polymers are as follows:

	<u>Polymer X</u>	<u>Polymer Y</u>	<u>Polymer Z</u>
Density (kgm^{-3})	920	1130	900
Heat Distortion Temp. ($^\circ\text{C}$)	40	110	55
Tensile strength (MPa)	10	85	35
Elongation at break (%)	600	200	400

Which of the following is true?

(A) Polymer X is Commodity and Polymer Z is Engineering Plastic
(B) Polymer Y is Commodity and Polymer X is Engineering Plastic
(C) Polymer Z is Commodity and Polymer Y is Engineering Plastic
(D) Polymer Y is Commodity and Polymer Z is Engineering Plastic

Common Data Questions**Common Data for Questions 29 and 30:**

For a polymer which follows the Mark-Houwink equation, the various parameters determined were as follows:

$K = 1.2 \times 10^{-4}$; $[\eta] = 2.4$; $a = 0.76$; Huggins' constant = 0.33; concentration, $c = 0.3 \text{ gDL}^{-1}$

- Q.29 The molecular weight of the polymer is
(A) 4.5×10^5 (B) 6.1×10^4 (C) 3.2×10^6 (D) 7.9×10^5
- Q.30 The specific viscosity of the above polymer is
(A) 0.73 (B) 1.12 (C) 0.89 (D) 2.30

Linked Answer Questions: Q.31 to Q.34 carry two marks each.**Statement for Linked Answer Questions 31 and 32:**

Consider step growth polymerization of two bifunctional monomers with a monomer ratio of 0.99 and the number average degree of polymerization of 66.8

- Q.31 The extent of reaction will be
(A) 0.90 (B) 0.95 (C) 0.99 (D) 1.00
- Q.32 The polydispersity index at stoichiometric conditions would be
(A) 1.90 (B) 1.95 (C) 1.85 (D) 1.99

Statement for Linked Answer Questions 33 and 34:

A polymer composite of mica filled polypropylene contains 60% polymer by mass.

Tensile elastic modulus of polypropylene = 23 MPa

Tensile elastic modulus of mica = 30 GPa

Density of polypropylene = 900 kgm^{-3}

Density of mica = 2800 kgm^{-3}

- Q.33 The volume % of mica in the composite is
(A) 25.95 (B) 17.60 (C) 14.83 (D) 39.27
- Q.34 The modulus of elasticity of the composite is
(A) 12.8 GPa (B) 20.3 GPa (C) 5.3 GPa (D) 31.7 GPa

I : FOOD TECHNOLOGY

Q. 1 – Q. 8 carry one mark each.

- Q.1 The major protein in corn is
 (A) Oryzenin (B) Glutenin (C) Zein (D) Hordenin
- Q.2 Which of the following is NOT a reducing sugar?
 (A) Lactose (B) Mannose (C) Maltose (D) Sucrose
- Q.3 Which of the following is an intrinsic factor influencing microbial growth in food?
 (A) Temperature (B) Relative humidity (C) Nutrients (D) Gas composition
- Q.4 Which of the following combination of starter cultures is mostly used for the production of yoghurt?
 (A) *Lactobacillus casei* and *Lactobacillus delbrueckii*
 (B) *Lactobacillus delbrueckii* and *Streptococcus thermophilus*
 (C) *Lactobacillus acidophilus* and *Leuconostoc mesenteroides*
 (D) *Streptococcus thermophilus* and *Leuconostoc mesenteroides*
- Q.5 Potassium bromate is used to improve the gluten quality of wheat dough by increasing
 (A) protein-protein ester linkages
 (B) protein-protein disulphide linkages
 (C) protein-protein interaction with large number of H-bonds
 (D) protein-starch interaction with large number of H-bonds
- Q.6 Which of the following substances is NOT a Class I preservative in food
 (A) Vinegar (B) Sodium benzoate (C) Vegetable oils (D) Citric acid
- Q.7 Saturated steam at temperature T_s ($^{\circ}\text{C}$) flows through a pipe and atmospheric air flows over the outer surface of the pipe. If the temperature of the air has increased from T_i to T_o , the effectiveness of the heat exchange can be expressed as
 (A) $\frac{T_s - T_o}{T_s - T_i}$ (B) $\frac{T_s - T_i}{T_s - T_o}$
 (C) $\frac{T_o - T_i}{T_s - T_i}$ (D) $\frac{T_o - T_i}{T_s - T_o}$
- Q.8 Convective mass transfer coefficient of water vapour diffusing from a water surface to air depends primarily on
 (A) velocity of air (B) viscosity of water vapour
 (C) density of water vapour (D) specific heat of water vapour

Q. 9 to Q.30 carry two marks each.

- Q.9 The following was obtained from an analysis of two oil samples A and B
 (a) Iodine value of A is greater than iodine value of B
 (b) Reichert Meissl value of A is less than Reichert Meissl value of B

Based on the above analysis, the following is the correct statement

- (A) Oil A is more unsaturated than oil B and has low molecular weight fatty acids
 (B) Oil A is less unsaturated than oil B and has low molecular weight fatty acids
 (C) Oil A is less unsaturated than oil B and has high molecular weight fatty acids
 (D) Oil A is more unsaturated than oil B and has high molecular weight fatty acids

- Q.10 Match the items in Group I with the most appropriate items in Group II

Group I

- (P) Iodine
 (Q) Curing salt
 (R) Avidin
 (S) Mono sodium glutamate

Group II

- (1) Biotin
 (2) Flavour enhancer
 (3) Goitre
 (4) Sausage
 (5) Anemia

- (A) P-3, Q-4, R-1, S-2
 (C) P-3, Q-4, R-5, S-2

- (B) P-5, Q-4, R-1, S-2
 (D) P-5, Q-2, R-1, S-4

- Q.11 Protein denaturation is a phenomenon of change in three dimensional structure of protein, and consequently an alteration of its functionality. Which of the following statement is NOT related to protein denaturation?

- (A) Accessibility of proteolytic enzymes to peptide bonds increases
 (B) Solubility and enzymatic activity of native protein decrease
 (C) Intrinsic viscosity and optical rotation of the protein solution increase
 (D) Increase in intrinsic viscosity through formation of amino acids by hydrolysis

- Q.12 If v is the reaction rate, V_{\max} is the maximum reaction rate, K_m is the Michaelis-Menton constant and $[S]$ is the substrate concentration, the Lineweaver-Burk plot for NO INHIBITION enzymatic reaction can be written as

$$(A) \frac{1}{v} = \frac{K_m}{V_{\max}} \frac{1}{[S]} + \frac{1}{V_{\max}}$$

$$(B) \frac{1}{v} = \frac{K_m[S]}{V_{\max}} + \frac{1}{V_{\max}}$$

$$(C) \frac{1}{v} = \frac{K_m}{V_{\max}} + \frac{[S]}{V_{\max}}$$

$$(D) \frac{1}{v} = \frac{K_m}{V_{\max}} + \frac{[S]^2}{V_{\max}}$$

- Q.13 Match the items in Group I with the most appropriate items in Group II

Group I

- (P) PER
 (Q) Synerisis
 (R) Soyabean
 (S) Lemon

Group II

- (1) Jelly
 (2) Essential amino acids
 (3) Neral
 (4) Saponin
 (5) Lycopene

- (A) P-2, Q-1, R-4, S-5
 (C) P-2, Q-1, R-4, S-3

- (B) P-2, Q-1, R-5, S-4
 (D) P-5, Q-1, R-4, S-3

Q.14 Which of the following is the structure of flavonol?

(A)

(B)

(C)

(D)

Q.15 The specific growth rate of *Bacillus cereus* in a food sample is 0.4 h^{-1} . Doubling time of the cell is

(A) 2.0 h

(B) 1.73 h

(C) 1.25 h

(D) 1.0 h

Q.16 Match the items in Group I with the most appropriate items in Group II

Group I

(P) Cheese

(Q) Enterotoxin B

(R) Bacteriocin

(S) Milk ropiness

Group II

(1) Hydrogen peroxide

(2) Nisin

(3) *Propionibacterium*(4) *Alcaligenes*(5) *Staphylococcus aureus*

(A) P-5, Q-1, R-2, S-4

(B) P-3, Q-1, R-5, S-4

(C) P-3, Q-5, R-2, S-4

(D) P-3, Q-5, R-2, S-1

Q.17 Five grams of cheese was mixed with 45 ml of sterile diluent. Two successive dilutions of 1:100 each were made and one-tenth milliliter from the last dilution was plated onto each of two plates containing plate count agar (PCA) medium. Following incubation, 56 colonies were counted on one plate and 54 on the other. The average number of colony forming units (CFUs) per gram of cheese is

(A) 5.5×10^5 (B) 5.5×10^6 (C) 5.5×10^7 (D) 5.5×10^8

Q.18 Match the items in Group I with the most appropriate items in Group II

Group I

(P) Spore former

(Q) Vinegar

(R) Psychrotroph

(S) Dysentery

Group II(1) *Listeria*(2) *Shigella*(3) *Lactobacillus*(4) *Bacillus*(5) *Acetobacter*

(A) P-3, Q-5, R-4, S-2

(B) P-4, Q-5, R-1, S-2

(C) P-4, Q-5, R-1, S-3

(D) P-4, Q-3, R-1, S-2

Q.19 Development of 'hot spot' in high moisture grain during storage in silo is due to

(A) exothermic reaction between moisture and starch present in the endosperm of the grain

(B) microbial growth and respiration of grain

(C) heating of the silo wall during day and cooling during night

(D) exothermic reaction between the moisture present in endosperm and the oil in germ

- Q.20 In modern rice mills, the two rubber rolls in the sheller rotate in opposite direction at the
- (A) same rotational speed and different surface speed
 (B) same rotational speed and same surface speed
 (C) different rotational speed and different surface speed
 (D) different rotational speed and same surface speed
- Q.21 Two food materials A and B, each having 14% moisture content (dry basis) are stored in a constant relative humidity chamber at 30°C for equilibration. The final moisture contents of A and B are 6% and 12% (both in dry basis), respectively. The final water activity a_{wA} of A and a_{wB} of B are related as
- (A) $a_{wA} : a_{wB} = 0.65:1$ (B) $a_{wA} : a_{wB} = 1:1$ (C) $a_{wA} : a_{wB} = 1:2$ (D) $a_{wA} : a_{wB} = 2:1$
- Q.22 Match the items in Group I with the most appropriate items in Group II

Group I

- (P) Disc centrifuge
 (Q) Multiple effect evaporator
 (R) UHT processing
 (S) Homogenization

Group II

- (1) Separation of solid phase in milk by coagulation
 (2) Aseptic packaging of milk
 (3) Separation of liquid phases in milk
 (4) Dispersion of one of the liquid phases in milk
 (5) Concentration of milk

- (A) P-3, Q-5, R-1, S-4
 (C) P-3, Q-5, R-2, S-1

- (B) P-1, Q-5, R-2, S-4
 (D) P-3, Q-5, R-2, S-4

- Q.23 Rigor mortis in meat is due to
- (A) glycolysis followed by formation of lactic acid
 (B) binding of collagen and elastin
 (C) action of cathepsin enzyme in meat
 (D) binding of myosin and actin
- Q.24 Following operations are adopted for cleaning in place (CIP) of equipment
- P: Cold water rinse; Q: Hot water rinse; R: Alkali cleaning; S: Acid cleaning
 The correct sequence of CIP for equipment used in UHT processing of milk is
- (A) P → Q → R → S → P (B) P → Q → R → Q → S → P
 (C) P → Q → R → P (D) P → Q → S → P
- Q.25 Following operations are adopted for refining of vegetable oils
- P: Winterization; Q: Alkali refining; R: Steam deodorization; S: Bleaching; T: Degumming
 The correct sequence of operations for the refining is
- (A) P → Q → T → R → S (B) S → R → Q → P → T
 (C) T → Q → S → R → P (D) R → T → Q → S → P

- Q.26 A liquid having density ρ and viscosity μ flows under laminar condition through a circular pipe having diameter D and length L against a pressure drop of ΔP . Volume flow rate of the liquid through the pipe will be proportional to
- (A) $\frac{D^4 \Delta P \rho}{\mu L}$ (B) $\frac{D^2 \Delta P}{\rho \mu L}$ (C) $\frac{D \Delta P \rho}{\mu L}$ (D) $\frac{D^4 \Delta P}{\mu L}$

- Q.27 A liquid having mass M (kg), heat capacity C_p ($\text{J.kg}^{-1}.\text{°C}^{-1}$) is cooled in an agitated vessel having surface area A (m^2). A cooling medium at temperature T_s (°C) is used for cooling the liquid. The differential equation governing the temperature change $dT/d\theta$ of liquid with overall heat transfer coefficient U ($\text{W.m}^{-2}.\text{°C}^{-1}$) for the vessel is given by

$$\begin{array}{ll} \text{(A)} \quad \frac{dT}{d\theta} = \frac{UA}{MC_p}(T_s - T) & \text{(B)} \quad -\frac{dT}{d\theta} = \frac{UA}{MC_p}(T_s - T) \\ \text{(C)} \quad \frac{dT}{d\theta} = \frac{MC_p}{UA}(T_s - T) & \text{(D)} \quad -\frac{dT}{d\theta} = \frac{MC_p}{UA}(T_s - T) \end{array}$$

- Q.28 Match the items in Group I with the most appropriate items in Group II

Group I

- (P) Freezing
(Q) Fat globules movement in milk
(R) Flow through packed bed
(S) Boiling temperature

Group II

- (1) Stoke's law
(2) Plank's equation
(3) Ergun's equation
(4) Hagen Poiseulli's equation
(5) Raoult's law

(A) P-4, Q-1, R-3, S-5

(C) P-2, Q-1, R-4, S-5

(B) P-2, Q-1, R-3, S-4

(D) P-2, Q-1, R-3, S-5

Common Data Questions

Common Data for Questions 29 and 30:

Milk having heat capacity $3900 \text{ J.kg}^{-1}.\text{°C}^{-1}$ and density 1020 kg.m^{-3} is pressurized to 300 atmosphere gauge pressure and allowed to flow through a high pressure homogenizing valve at a rate of 60 liters per min. The diameter of the homogenizing valve through which the milk flows is 6 mm. (1 atmosphere = 101.3 kPa)

- Q.29 Temperature rise in milk will be

(A) 10.1 °C (B) 9.2 °C (C) 7.7 °C (D) 6.1 °C

- Q.30 Height of the valve lift will be

(A) 0.06 mm (B) 0.11 mm (C) 0.16 mm (D) 0.22 mm

Linked Answer Questions: Q.31 to Q.34 carry two marks each.

Statement for Linked Answer Questions 31 and 32:

A medium acid food is sterilized at 100°C in a can to reduce the number of heat resistant organism ($D_{120} = 0.2 \text{ min}$; $z = 10\text{°C}$) from an initial count of 10000 per can to a probability of survival of 1 in million.

- Q.31 D_{100} value of this organism is

(A) 0.4 min (B) 20 min (C) 4 min (D) 10 min

- Q.32 The total processing time is

(A) 100 min (B) 40 min (C) 200 min (D) 4 min

Statement for Linked Answer Questions 33 and 34:

Compressed air at 0.5 atmosphere gauge pressure and 30°C contains 0.01 kg water vapor per kg dry air. Molecular weight of dry air and water vapor are 28.9 and 18 kg.kmol⁻¹, respectively. Saturation vapor pressure of water at 30°C is 4.246 kPa absolute. (1 atmosphere = 101.3 kPa)

- Q.33 Partial pressure of water vapor inside the compressor is
(A) 2.15 kPa (B) 2.40 kPa (C) 3.12 kPa (D) 3.51 kPa
- Q.34 Relative humidity of air inside the compressor is
(A) 40.1% (B) 49.8% (C) 56.5% (D) 57.6%
