(4) 7 mA

Ans. (2)

Sol.

$\mathrm{V}_{\mathrm{z}}=3 \mathrm{~V}$

29. An electron is moving under the influence of the electric field of a uniformly charged infinite plane sheet $S$
having surface charge density $+\sigma$. The electron at $t=0$ is at a distance of 1 m from S and has a speed of 1 $\mathrm{m} / \mathrm{s}$. The maximum value of $\sigma$ if the electron strikes $S$ at $t=1 \mathrm{~s}$ is $\alpha\left[\frac{\mathrm{m} \epsilon_{0}}{\mathrm{e}}\right] \frac{\mathrm{C}}{\mathrm{m}^{2}}$ the value of $\alpha$ is

Ans. (8)

Sol. $\quad u=1 \mathrm{~m} / \mathrm{s} ; \mathrm{a}=-\frac{\sigma \mathrm{e}}{2 \varepsilon_{0} \mathrm{~m}}$
$\mathrm{t}=1 \mathrm{~s}$
$S=-1 m$

Using $S=u t+\frac{1}{2} a t^{2}$
$-1=1 \times 1-\frac{1}{2} \times \frac{\sigma \mathrm{e}}{2 \varepsilon_{0} \mathrm{~m}} \times(1)^{2}$
$\therefore \sigma=8 \frac{\varepsilon_{0} m}{e}$
$\therefore \alpha=8$
30. In a test experiment on a model aeroplane in wind tunnel, the flow speeds on the upper and lower surfaces of the wings are $70 \mathrm{~ms}^{-1}$ and $65 \mathrm{~ms}^{-1}$ respectively. If the wing area is $2 \mathrm{~m}^{2}$ the lift of the wing is $\qquad$ N .
(Given density of air $=1.2 \mathrm{~kg} \mathrm{~m}^{-3}$ )

Ans. (810)

Sol. $\quad \mathrm{F}=\frac{1}{2} \rho\left(\mathrm{v}_{1}^{2}-\mathrm{v}_{2}^{2}\right) \mathrm{A}$
$\mathrm{F}=\frac{1}{2} \times 1.2 \times\left(70^{2}-65^{2}\right) \times 2$
$=810 \mathrm{~N}$
